

RE\_IMAGINE YOUR FUTURE  
**Senior QA Engineer**  
Dublin, Ireland

Work on challenging new product features and prototypes in a fast-paced software team. Share your expertise and learn new skills from our talented and dynamic team.

As a technical QA engineer in the Technology Services group of Munich Re Automation Solutions you will participate in the creation, enhancement and maintenance of the software at the heart of our product offerings and the customer solutions built on those products. You will work on innovative new products and prototypes, helping to progress concepts into features and services and helping us continue to exceed expectations and deliver high quality, market-leading software products.

We are looking for a confident, self-motivated individual with a passion for technology and excellent communication skills who thrives in a collaborative team environment. You will be a part of an energetic team with a passion for building great software and a collaborative upbeat work ethic where you have ownership over a part of each release.

## About the role

- Work as a technical QA Engineer to develop and execute test cases for both new product features and customer projects.
- Contribute to full SDLC from ideas and design phase right through to implementation, release and deployment.
- Design new test cases for use in automation as well as the ability to automate legacy tests
- Some execution of manual and ad-hoc tests.
- Focus on quality, efficiency and best practices. Share and support great ideas.
- Constantly improve, contribute to (and learn from) our knowledge base.
- Ensure QA processes and procedures are documented, understood and followed.

## Qualifications

- BA/BS in Computer Science or equivalent technical experience.

## Technical Skills

### Key Skills

- Strong automation experience.
- At least 1 year of JavaScript experience.
- Testing webapps built on modern javascript libraries (e.g. AngularJS, Angular2+, React).
- Experience with JavaScript based testing frameworks (Protractor, Cypress or others).
- Experience with BDD frameworks (Jasmine, Cucumber).
- Some experience with automated CI/CD pipeline technologies (AWS, Azure, Bamboo, Docker, or others).
- Excellent analytical skills.

## Additional Skills

- Load testing tools (JMeter or others).
- Solid understanding of handling asynchronous behaviour in JS.
- Ability to read Java code.
- Experience testing Web Services: RESTFul, SOAP.
- Working knowledge of Application/Web Servers (JBoss, WebSphere, WebLogic, Tomcat).
- Working knowledge of Database Servers (MySQL, MS SQL Server, Oracle and DB2).

## Competencies

- Excellent technical skills.
- Able to design a test scope of product feature based on requirements.
- Hands on work ethic – take responsibility, show initiative, get things done.
- Collaborative person.
- Strong communication skills to liaise with various departments and colleagues efficiently.
- Excellent Customer Service Orientation.

## Work Experience

- You should have 5+ years experience as a QA Engineer, with strong experience testing webapps.
- Strong automation.
- Familiarity with modern software development processes, experience working in an iterative agile development environment.
