Summary of Metrics

Greenhouse Gas Emissions from own operation

The Canadian Branch follows the GHG Protocol Corporate Standard methodology, as appropriate, to measure its own operation emissions. The GHG Protocol Corporate Standard methodology aligns with Munich Re Group's GHG emissions calculation bases.

Further information on Munich Re Group's own operation measurement approach, inputs and assumptions used to measure its Scope 1 and Scope 2 GHG emissions, and the underlying reasons for these decisions, please refer to **Munich Re Group Annual Report** and the **TCFD, OSFI B-15 Index** Topic Metrics & Targets

The Canadian Branch's emissions for the year to December 31, 2025 are presented in the Site Emission Scorecard below:

CO2 emissions for Munich Re Canada Branch	2025
Scope 1 – Direct emissions Relates to company owner occupied offices and company owned modes of transportation, use of natural gas, backup generation fuels, refrigerant (top-ups and leakages) and fuel consumption	0.5 tCO2e
Scope 2 – Indirect emissions from energy consumption Relates to company owner occupied offices purchased electricity	221 tCO2e
