Ladies and gentlemen,

Dr. Hans-Jürgen Schinzler

Chairman of the
Supervisory Board

In the financial year 2009, the composition of the Supervisory Board changed considerably as a result of the elections at the Annual General Meeting on 22 April 2009. As Chairman of both the former and current Supervisory Board, I can assure you that the Supervisory Board duly fulfilled the tasks and duties incumbent upon it under the law, the Articles of Association and the rules of procedure.

The Board of Management informed us directly about all decisions of fundamental significance and briefed us regularly, both orally and in writing, about all important transactions. At the scheduled meetings, the Board of Management kept the Supervisory Board up to date on strategic developments, corporate planning, comparisons with competitors, and business performance. The Board of Management satisfied its reporting obligations towards the Supervisory Board in all respects. We discussed its reports in detail at our meetings and submitted suggestions and proposals for improvement. Overall, as in previous years, the Board of Management was commendably open in its collaboration with the Supervisory Board and was always prepared to engage in a constructive exchange of ideas. The shareholder and employee representatives had the opportunity prior to the Supervisory Board meetings to raise important topics separately with the Chairman of the Board of Management.

As Chairman of the Supervisory Board, I was in regular contact with the Chairman of the Board of Management, particularly in connection with key issues of strategy, corporate risk management and current business performance. In addition, the Chairman of the Board of Management informed me of significant events and developments in the Group where necessary. Dr. Albrecht Schmidt, Chairman of the Audit Committee until 22 April 2009, and his successor, Prof. Dr. Henning Kagermann, remained in close contact with Dr. Jörg Schneider, member of the Board of Management, whose responsibilities include Group reporting.

The Supervisory Board advised the Board of Management in its running of the Group and constantly monitored its management activities. At no time did we see cause to carry out inspection measures in accordance with Section 111 para. 2 sentence 1 of the German Stock Companies Act.

Focal points of the meetings of the full Supervisory Board

In 2009, the Supervisory Board held six meetings and one discussion on strategic topics. A representative of the German Federal Financial Supervisory Authority (BaFin) took part as a guest at one of the meetings.

At every meeting, we discussed the Munich Re Group's performance. Against the background of the still difficult financial market situation, we considered business opportunities and risks together with the Board of Management and obtained detailed reports on the Group's risk situation and profitability. We satisfied ourselves that the Board of Management was guiding Munich Re soundly through the financial crisis thanks to its prudent risk strategy. We regularly gained an overview of the Group's investments, naturally with due regard to the current situation on the financial and capital markets. We debated the Group's risk strategy at length with the Chief Risk Officer. The Supervisory Board also established procedure for handling risk strategy at the plenary sessions in future, including the distribution of responsibilities between the Audit Committee and the full Supervisory Board. In addition, at a separate meeting in July, we looked closely at all aspects of the Group's strategic positioning in the economic crisis. Munich Re's integrated strategy of combining primary insurance and reinsurance under one roof was also discussed in detail.

At our first meeting in 2009, we concerned ourselves with the Company and Group financial statements for the 2008 financial year and prepared the motions for resolution by the 2009 Annual General Meeting. We also took reports on compliance and anti-fraud management. At the other meetings held in the financial year, we considered the quarterly reports and annual result expected for 2009. In autumn, we had an in-depth discussion on the Group planning for 2010 and 2011.

Other focal points of our consultations in the second half of the year were the changes to the German Corporate Governance Code and, above all, the German Act on the Appropriateness of Management Board Remuneration. We decided on amendments to the rules of procedure for the Supervisory Board and on the introduction of rules of procedure for the Audit Committee. At an extraordinary meeting, we also concerned ourselves extensively with proposals for the early adaptation of the remuneration system for the Board of Management to the provisions of the Act on the Appropriateness of Management Board Remuneration. In a further plenary session, we adopted the revised remuneration system applicable since 1 January 2010, which is geared even more strongly to sustainable corporate development. We also adopted resolutions regarding the amount of remuneration for the Board of Management with effect from 1 January 2010 and the assessment bases for variable remuneration in 2010. More details can be obtained from the remuneration report on page 56 of the annual report.

Other items on the agenda at meetings of the full Supervisory Board were current issues, such as the introduction of the new brand and the further organisational development of the new field of business, Munich Health. Between the meetings, we received ad-hoc reports concerning important matters in the Group, such as the key figures of the 2009 financial statements, the Desertec project, the new ERGO brand strategy, and the planned squeeze-out at ERGO.

Work of the committees

The Supervisory Board elections in 2009 also resulted in changes in the composition of the Supervisory Board committees (Personnel Committee, Audit Committee, Standing Committee, Nomination Committee and Conference Committee) in the year under review. An overview is presented on page 123. The committee chairmen submitted full reports on the topics dealt with by the committees at all meetings of the full Supervisory Board.

The Personnel Committee met six times. In addition to succession planning for the Board of Management, the Committee also considered the extension of one Board member's contract. Besides this, it decided on the remuneration from the 2008 annual bonus payment and medium-term bonus 2006–2008. A regular item on the agenda was the authorisation of the acceptance of new seats on supervisory, advisory and similar boards by members of the Board of Management. In the second half of 2009, the new statutory provisions under the Act on the Appropriateness of Management Board Remuneration and the new regulations of the German Corporate Governance Code were central issues discussed, which led inter alia to changes in the responsibilities of the Personnel Committee and full Supervisory Board. As a result, the Personnel Committee no longer decided on the Board of Management's remuneration but prepared the relevant resolution for the Supervisory Board, giving detailed attention to the new remuneration structure for members of the Board of Management. This included the design of the variable remuneration, retirement provision, fringe benefits and the necessary adjustments to the employment contracts for members of the Board of Management. In addition, the Personnel Committee prepared the proposal for a resolution by the full Supervisory Board on the basis for variable remuneration in 2010.

The Standing Committee met three times in the year under review. It prepared the meetings of the Supervisory Board and dealt with corporate governance issues. It also received regular reports on the share register.

The Audit Committee held six meetings in 2009. At two meetings with the external auditor, it discussed in detail the Company and Group financial statements, the Company and Group management report, the auditor's report and the Board of Management's proposal for the appropriation of the net retained profits for the financial year 2008. The Chief Risk Officer submitted his report on the Group's risk situation. In this context, we also debated the minimum requirements for the risk management of insurance undertakings, or MaRisk (VA), issued by BaFin in January 2009. The Head of Internal Audit regularly reported on his reviews in 2008 and the audit planning for 2009. Topics of compliance were dealt with by the Audit Committee at every meeting. Additionally, the committee also had the Compliance Officer report personally on his department's responsibilities and measures and on specific compliance incidents.

The newly elected Audit Committee examined the work and fundamental monitoring processes it is responsible for performing. As a result, it submitted to the full Supervisory Board a proposal to issue Audit Committee rules of procedure. The committee reviewed and monitored the auditor's independence. In this context, the Audit Committee also took delivery of reports from the auditor on its auditing and non-audit-related services. It also commissioned the audit for the financial year 2009 and decided on the focal points of the audit – taking into account the new minimum risk management requirements for insurance companies – and the auditor's fees. Furthermore, it commissioned the external auditor with a review of the half-year financial report 2009. The Audit Committee also scrutinised the 2009 quarterly reports and the 2009 half-year financial report, which it discussed at length in the presence of the auditor.

Naturally, the Audit Committee was concerned with the impact of the financial crisis on Munich Re in the financial year ended. It therefore paid particular attention to the Group's asset management. Likewise, it monitored and debated the Group's risk situation. Finally, the Audit Committee discussed risk management and risk strategy developments with the Chief Risk Officer. At the committee's request, the Chief Risk Officer will, in future, submit the risk report on a quarterly basis and provide answers to questions as required, but at least twice a year. The Audit Committee received separate reports on the development of embedded values in life reinsurance business and in life and health primary insurance business.

The Nomination Committee met four times in 2009. It first prepared the election of the shareholders' representatives by the 2009 Annual General Meeting. The committee selected suitable candidates on the basis of the criteria it had defined and submitted its proposals to the full Supervisory Board so that the Annual General Meeting could decide on the Supervisory Board nominations. Following the death of Prof. Karel Van Miert, the Nomination Committee met three times in order to determine his successor. At the suggestion of the committee and with the consent of the shareholders' representatives, the Board of Management applied for the appointment of Dr. Benita Ferrero-Waldner, former Member of the European Commission, by the Registration Court. Under item 5.4.3 of the German Corporate Governance Code, this appointment is limited until the next Annual General Meeting. The Supervisory Board proposes that Dr. Ferrero-Waldner be elected by the Annual General Meeting 2010 for the remaining term of office.

The Conference Committee as stipulated by Section 27 para. 3 of the German Co-Determination Act and item 7.5 of the rules of procedure for the Supervisory Board did not need to be convened in the financial year ended.

Corporate governance and declaration of conformity

The Supervisory Board considered the amendments to the German Corporate Governance Code and adjusted the rules of procedure of the Supervisory Board accordingly, in particular with a view to the extended responsibility of the full Supervisory Board for Board of Management remuneration. The Standing Committee looked into the efficiency of the Supervisory Board's work and presented the results to the full Supervisory Board. Further information on these topics and on corporate governance in general is available in the joint report of the Board of Management and Supervisory Board on page 50.

In November 2009, the Board of Management and Supervisory Board submitted their annual declaration of conformity with the German Corporate Governance Code as per Section 161 of the German Stock Companies Act, which can be read on page 49 of this report and on the Company's website.

Changes on the Supervisory Board

At the end of the Annual General Meeting on 22 April 2009, the five-year term of office of the Supervisory Board expired. The following shareholders' representatives retired: Ulrich Hartmann, Prof. Dr. Hubert Markl, Prof. Dr. Heinrich v. Pierer and Dr. Albrecht Schmidt. With the exception of Herbert Bach, all the employee representatives retired from the Supervisory Board, i.e. Hans-Georg Appel, Holger Emmert, Dr. Rainer Janßen, Kerstin Michl, Ingrid Müller, Dr. Jürgen Schimetschek, Wolfgang Stögbauer, Josef Süßl and Judy Vö. The Supervisory Board wishes to thank all the retired members for their valuable and constructive counsel and their dedication to the development and supervision of Munich Re, in some cases over many years.

The Annual General Meeting elected Prof. Dr. Peter Gruss, Peter Löscher, Anton van Rossum and Dr. Thomas Wellauer as new members of the Supervisory Board. On the basis of the co-determination agreement concluded as part of the merger between MR Italia and Munich Reinsurance Company, the following employee representatives were newly appointed to the Supervisory Board: Dina Bösch, Hans Peter Claußen, Frank Fassin, Christian Fuhrmann, Silvia Müller, Marco Nörenberg, Reinhard Pasch, Andrés Ruiz Feger and Richard Sommer.

Prof. Karel von Miert died on 23 June 2009. He had been a member of the Supervisory Board from 2002 until his death. We mourn the loss of an exceptional figure and a knowledgeable and far-sighted advisor, whose memory we honour.

Company and Group financial statements

KPMG Bayerische Treuhandgesellschaft Aktiengesellschaft Wirtschaftsprüfungsgesellschaft Steuerberatungsgesellschaft duly audited the following documents and gave them an unqualified auditor's opinion: the financial statements and management report of Munich Reinsurance Company and the Group financial statements and management report as at 31 December 2009. The respective reports and the Board of Management's proposal for appropriation of the net retained profits were submitted directly to the members of the Supervisory Board. At its meeting on 1 February 2010, the Audit Committee had the opportunity to confer in detail about the preliminary year-end figures as at 31 December 2009. On 8 March 2010, they prepared the Supervisory Board's resolution on the adoption of the Company financial statements and the approval of the Group financial statements. In this context, the Audit Committee examined the Company and Group financial statements, the management reports and the Board of Management's proposal for appropriation of the net retained profits. It discussed these at length with the auditor present at the meeting and also gave detailed consideration to the auditor's reports. The Chairman of the Audit Committee briefed the full Supervisory Board about the outcome of its consultations at the balance sheet meeting on 9 March 2010.

The Supervisory Board also checked the Munich Reinsurance Company and Group financial statements and management report and the proposal of the Board of Management for appropriation of the net retained profits. After conducting its own concluding examination and having heard the auditor's report, the Supervisory Board had no objections and agreed to the outcome of the external audit. It approved the Company financial statements and Group financial statements on 9 March 2010. The financial statements were thus adopted. Having carefully weighed all the relevant aspects, the Supervisory Board also agreed with the Board of Management's proposal for appropriation of the net retained profits.

Words of thanks to the Board of Management and employees

In an environment that remained difficult, the Board of Management and employees showed both great dedication and prudence. This was a key factor in achieving another successful overall result in the financial year 2009, for which the Supervisory Board wishes to thank them most sincerely.

Munich, 9 March 2010

For the Supervisory Board

A handwritten signature in blue ink, reading "H. J. Schinzler.", is centered on the page. The signature is written in a cursive, slightly slanted style.

Munich Reinsurance Company

In order to make the spectrum of our global business model clearer, all our reinsurance units throughout the world appear under the uniform brand of Munich Re. As of September 2009, this also applies to the German-speaking market. We use the reinsurance brand for the Group as well, and thus refer to the Munich Re Group as Munich Re. When we report on Münchener Rückversicherungs-Gesellschaft Aktiengesellschaft in München, we refer to Munich Reinsurance Company. Primary insurance business is combined in the ERGO Insurance Group (ERGO). In the past year, Munich Reinsurance Company increased its 95% stake in ERGO by almost 5%. It is planned that the holders of the approximately 237,000 shares remaining, i.e. 0.31% of the share capital, will receive cash compensation. This measure will further simplify the Group's shareholding structures, reduce costs and facilitate Group-wide cooperation.

Structure

Munich Re is one of the world's leading risk carriers. The Group's business activities cover the whole value chain of insurance and reinsurance. Munich Re is also active in the field of asset management. Munich Reinsurance Company is Munich Re's parent company.

We conduct our business directly from our headquarters and also via a large number of branches. Since 2005, Munich Reinsurance Company and ERGO Versicherungsgruppe AG have been under unified control within the meaning of the German Stock Companies Act. The relevant statutory regulations and a Group directive govern the distribution of responsibilities and competences for key decisions between Group management and ERGO. The Board of Management of Munich Reinsurance Company, which for legal purposes continues to represent the Company externally, has divided its responsibilities between two Board committees: the Group Committee and the Reinsurance Committee. This structure is geared to maintaining clearly defined strategic management of the equal-ranking business segments and provides for clear assignment of responsibility.

This management report summarises the business operations of Munich Reinsurance Company.

Reinsurance business is organised in six divisions and Munich Health.

Our international life and health reinsurance business is written in the Life Division and Munich Health respectively. Their organisational structures reflect those of many of our clients, which conduct these two classes of business separately from property-casualty insurance, often through independent entities.

Reinsurance business
handled by six divisions and
Munich Health

In the business field of Munich Health set up in 2008, Munich Re combines its health reinsurance worldwide and health primary insurance outside Germany¹. The business field has been operating under the Munich Health brand since May 2009.

The Munich Health business field has over 5,000 staff Group-wide at 26 locations throughout the world, servicing clients in over 40 countries. To best meet the often highly diversified needs of clients on a local level, Munich Health has established a decentralised organisation, which is managed from four regional business hubs in Princeton, Abu Dhabi, Singapore and Munich.

Our Europe and Latin America Division is responsible for the property-casualty business of our clients from Europe (except Germany) and Latin America. In order to simplify organisational structures within Munich Re, we merged Münchener Rück Italia into Munich Reinsurance Company in January 2009.

The Germany, Asia Pacific and Africa Division conducts property-casualty business with our clients in Germany, Africa, Asia, Australia and the Pacific Islands.

Special and Financial Risks (SFR) is in charge of the classes of credit, aviation and space, agriculture, enterprise, contingency and political risks, and of alternative markets business. Insurance risk securitisation and risk transfer to the capital markets are handled by our Risk Trading Unit. In addition, the division also attends to our own reinsurance requirements (retrocession).

Global Clients and North America handles our accounts with major international insurance groups (hence "Global Clients") and globally operating Lloyd's syndicates. It also pools our know-how in the North American market. It is responsible for our subsidiaries there, including Munich Reinsurance America, Munich Reinsurance Company of Canada, The Midland Company (Midland) and the Hartford Steam Boiler Group (HSB Group). Besides this, it also handles the business written selectively from Munich and international special lines of business such as workers' compensation and marine.

The Corporate Underwriting Division performs an important function for our property-casualty reinsurance business, without direct responsibility for operative business: its staff clarify fundamental issues of underwriting policy, oversee quality assurance, integrate mathematical methods into our business processes, and set standards for claims management.

¹ Excluding travel insurance.

MEAG MUNICH ERGO AssetManagement GmbH (MEAG) combines the investment activities of Munich Re and ERGO. Virtually the entire asset management of the Group is concentrated here. Its subsidiary MEAG MUNICH ERGO Kapitalanlagegesellschaft mbH is one of the major investment fund companies in Germany. It also offers its comprehensive know-how to external institutional investors and private clients, whose assets under management total around €8bn.

MEAG operates internationally, with offices in New York and Hong Kong. Since July 2006, it has held a 19% stake in PICC Asset Management Company Ltd. (PAMC), Shanghai, the asset management subsidiary of the People's Insurance Company of China (PICC).

Important tools of corporate management

Integration of Munich Reinsurance Company in Group management system

Our corporate management is based mainly on a Group perspective, in which Munich Reinsurance Company is a significant component. Since our fields of business are managed on a Group-wide basis, it is difficult to “extract” the Company from this overall concept. A description of the Group’s and reinsurance group’s management system is provided in the following. If Munich Reinsurance Company is not mentioned specifically, the Group or reinsurance group is meant. A description of the implications of the Group’s objectives for the Company’s key performance indicators is provided in the last paragraph.

Munich Re’s value-based management philosophy

Munich Re’s objective is to analyse risks from every conceivable angle and to assess and diversify them, thereby creating lasting value for its shareholders, clients and staff. A guiding principle of our entrepreneurial thinking and activity is to increase Munich Re’s share price on a sustained basis. This is also the aim of our active capital management – be it through the payment of dividends or the repurchasing of shares – if added value cannot be created for our shareholders through other measures. The main features of our shareholder value approach in practice are the consistent application of value-based management systems, which we constantly refine, within the Group.

The framework for any business activity is our risk strategy (see page 74). Besides value-based parameters, we observe a range of important additional conditions in managing our business. These conditions may be reflected in supplementary targets or may even determine a unit’s short-term orientation in a particular situation. They include rules of local accounting systems, tax aspects, liquidity requirements, supervisory parameters, and rating agency requirements.

Our value-based management is characterised by the following aspects:

- // We assess business activities not only according to their earnings potential but also relative to the extent of the risks assumed, which is material in measuring added value as well. Only the risk-return relationship reveals how beneficial an activity is from the shareholder point of view.
- // With value-based performance indicators we ensure the economic view and the necessary comparability of alternative initiatives and prioritise these.
- // We clearly assign responsibilities and make the levers for adding value transparent for both management and staff.
- // We closely link strategic and operative planning.

All initiatives are ultimately geared to the overriding financial objective of enhancing corporate value on a sustained basis.

Value-based management system takes into account the individual characteristics of the business segments

Property-casualty insurance and reinsurance, and health reinsurance, are lines of business that are mainly of a short-term nature. For these, we employ the following simple formula for measuring the value added annually by our insurance business and for managing and monitoring our business activities:

$$\text{Adjusted result} - \text{Cost of equity} = \text{Value added}$$

Determining value added

The adjusted result serves as the basis for determining the value added. It consists of the underwriting result (derived from the income statement), the investment result, and the remaining non-technical result. In each case, value-based adjustments are made, including the smoothing of expenditure for major losses, the normalisation of investment income, and the recognition of future claims expenses at present value.

We compare the result adjusted in this way with the requisite cost of equity. A significant factor in calculating the cost of equity is the risk-based capital, which we determine using our internal model. For property-casualty business and health reinsurance, value is added to the extent that, measured on the basis of one calendar year, the adjusted result exceeds the cost of equity.

Embedded value as a performance indicator in life insurance

The products of life primary insurance and life reinsurance, and the bulk of our health primary insurance business, are characterised by their long-term nature and the distribution of results over the duration of the policies. For valuing such long-term portfolios, whose performance cannot be reasonably measured on the basis of a single year, we follow the current version of the Market Consistent Embedded Value (MCEV) Principles ¹, published by the European Insurance CFO Forum in October 2009. A presentation of MCEV is available on the Company's website.

MCEV comprises a company's equity and the value of in-force covered business. The latter is the present value of future profits (where profits are post-taxation shareholder cash flows from the in-force covered business and the assets backing the associated liabilities) calculated using financial and actuarial methods, taking into consideration the time value of the financial options and guarantees and the explicitly determined costs of capital.

MCEV relates to the portfolio existing at the valuation date. 100% of our life reinsurance business and more than 94% of our life primary insurance and long-term health primary insurance business is reflected in it. By contrast, MCEV does not include the value of future new business. However, the valuation is made under the assumption of continued operations, i.e. taking into account the related costs in particular. Options and guarantees – especially for the policyholders – are explicitly valued using stochastic simulations. MCEV reflects the present value of all cash flows for all important currency regions on the basis of the "swap rates" and the implicit volatilities at the valuation date of 31 December 2009. Assets that are traded on the capital markets are valued on the basis of the market values observed at the valuation date.

The development of the insurance portfolio is modelled by applying the current expectations for biometrics, lapses and costs. In primary insurance, the participation of policyholders in surplus is modelled according to the current planning and in line with the statutory regulations, and thus taken into account in the valuation. For the individual companies, the tax rates and calculations used are based on national regulations; in addition, tax loss carry-forwards are included in the calculation. Withholding taxes on dividends of Group companies are disregarded. The cost of capital includes not only the taxes and costs of investment management but also the not explicitly modelled risks of the business and, for health primary insurance, the participation of policyholders in surplus.

¹ Copyright© Stichting CFO Forum Foundation 2008.

The change in MCEV within one year, adjusted for effects of exchange rate fluctuations, acquisition or sale of companies, dividends and capital injections, is shown by us as the total embedded value earnings. Adjustments to eliminate the influences of changes in fiscal and capital-market parameters give the operating embedded value earnings, which are a measure of the operative business performance for one year.

Our steering of Munich Re's investments is strongly geared to the structure of the liabilities on our balance sheet. With the help of asset-liability management, we determine the economic neutral position. This synthetic investment portfolio best reflects the characteristics of our liabilities towards clients, taking into consideration significant additional parameters in the investment of capital.

In an optimisation process, a benchmark portfolio is developed that reflects our own risk-bearing capacity and other investor preferences on the basis of long-term expectations of capital market yields. Our asset manager MEAG is responsible for implementing this strategic benchmark portfolio into concrete investments, from which it deviates only within a carefully defined framework and taking into account its own market view for the respective financial year. The target return, i.e. the expected income from the benchmark portfolio, is compared with the return from the actual portfolio. MEAG's performance is measured in terms of the excess return it achieves, taking into consideration the risks incurred.

In addition to these purely financial performance factors, non-financial performance measures like innovation, speed of processes, staff-training level and client satisfaction play a part. In the long term, a firm can only be successful if it operates sustainably and takes account of such future-oriented qualitative factors as well.

We closely link strategy and operative planning by defining our strategies in structured overviews or "scorecards", from which we derive initiatives, performance measures and responsibilities. The scorecards have four perspectives: "financial", "market and client", "process" and "employee". We promote an entrepreneurial culture among our staff through the clear allocation of responsibility and accountability, recognising how much the individual, unit or field of business contributes to increasing value. Our incentive systems for staff, executives and Board support the clear orientation towards value creation. The higher a staff member or executive is positioned in the management hierarchy, the more strongly their remuneration is based on performance.

In order to also give more emphasis in external communication to Munich Re's value orientation – as implemented through our internal management tools – we have geared our Group return target to risk-adjusted performance indicators, which are explained in more detail below.

What we aim to achieve – Situation in 2009

The financial crisis, whose repercussions have in the meantime weakened, also had an impact on insurance business in 2009. We nevertheless reached our long-term target of a 15% return on risk-adjusted capital after tax (RORAC) over the full cycle (for a definition of RORAC see page 16). Our RORAC of 15.1% for 2009 was a respectable result given the still appreciable financial upheavals and low level of interest rates. This achievement was mainly due to positive claims experience in reinsurance and primary insurance and the improved return on investment of 4.3% (3.4%). This is the ratio of the investment result of €7.9bn to the average market value of the investment portfolio at the balance sheet and quarterly reporting dates, totalling €181bn. With Munich Re's absolute consolidated profit rising to €2.6bn, the return on equity or RoE rose to 11.8% in terms of the average value of IFRS equity at the year-end and quarterly reporting dates. Compared with its competitors, Munich Re has weathered the financial crisis relatively well, thanks to its robust capitalisation, prudent risk management and balanced investment policy.

The combined ratio, which is calculated as the percentage ratio of the sum of net expenses for claims and benefits plus net operating expenses to net earned premiums, corresponds to the sum of the loss ratio and the expense ratio. Put simply, a combined ratio of 100% means that premium income was exactly sufficient to cover claims and costs. Net expenses for claims and benefits mainly include paid claims, the change in claims provisions, and the bulk of other underwriting expenses. Not included in the expenses are insignificant portions of other underwriting expenses such as German fire brigade tax. Net operating expenses chiefly comprise the costs arising in the acquisition of new business (e.g. commission) and for the ongoing administration of insurance contracts.

In the property-casualty reinsurance segment, there were net expenses for claims and benefits of €9,267m (9,362m) and net operating expenses of €4,171m (4,003m) in 2009, compared with net earned premiums of €14,096m (13,448m). The combined ratio thus amounts to 95.3% (99.4%) – a clear improvement partly due to the low major-loss burden from natural catastrophes totalling €196.1m, or 1.4% of net earned premiums. Our cycle management and underwriting discipline continue to form the basis of this success.

In 2009, paid claims and the change in claims provisions in the property-casualty primary insurance segment (including legal expenses insurance) totalled €2,763m (2,625m) and net operating expenses €1,511m (1,463m), compared with net earned premiums of €4,591m (4,497m). Our combined ratio in primary insurance thus amounts to 93.1% (90.9%).

When it comes to interpreting the combined ratio, the particular circumstances of the class of business in question have to be taken into account. The composition of the portfolio, for example, is of great significance. The following factors (among others) are important:

- // The more the claims burden fluctuates over time, the greater the risk is and so the premiums needed to cover the risk must be higher. This means that the loss ratios in good years are low, as are the average loss ratios that provide the reinsurer with an adequate return for assuming the risk. This is particularly true in the case of natural catastrophes, which may occur rarely, but are often very severe when they do.
- // Another important distinguishing feature relates to the time-lag between premiums being received and claims being paid. The longer these periods are, the longer the premiums received can be invested in the capital markets. High combined ratios in classes of business in which claims settlement takes a long time (e.g. casualty) therefore generally entail higher returns from investments with which the loss reserves are covered. These returns are not reflected in the combined ratio.

Therefore, while we aim to keep our combined ratio as low as possible, it is not our only target.

The key factor we consider is economic value added, which cannot be properly reflected by the combined ratio. We pursue this target internally through the performance indicator of value added, which measures value creation not only on the basis of current and forecast profits but also taking into account the size of the risks assumed. Thus, when considering Group performance, we gear targets (by way of a common, linking element) to a risk-adjusted return. Although this is not a direct performance measure, it is a strong indication of Munich Re's value creation.

Risk-based Group return target for the financial year 2010

Given the continued uncertainties involved in estimating possible implications of the financial and economic crisis, it is difficult to define guidelines for our future entrepreneurial success. Nevertheless, the targets we have set ourselves for 2010 are ambitious against the background of continuing uncertainties. For this purpose, we are again employing a risk-based performance measure which we have used for external communication since 2006: return on risk-adjusted capital (RORAC). We derive this target by placing the profit achieved or aimed at, expressed in euros, in relation to the necessary risk capital, the amount of which we determine using our internal risk model and publish once a year. Information on the internal risk model is provided on page 85. We thus take into account the economic standards currently underlying (at least to some extent) the requirements of supervisory authorities and rating agencies – standards that are set to play a decisive role in future.

RORAC is defined as follows:

$$\text{RORAC} = \frac{\text{net income} - \text{interest rate} \times (1 - \text{tax rate}) \times \text{additional available economic equity}}{\text{risk-based capital}}$$

The numerator in the formula comprises the published IFRS net income adjusted for post-tax income (interest rate x [1 – tax rate]) generated on capital not subject to risk within the given risk tolerance. The basis for the adjustment is the capital exceeding the necessary risk-based capital, which is referred to as additional available economic

equity. It is also necessary for rating and solvency purposes, as well as for profitable growth, but we strive to keep it lean through our active capital management, because the additional available economic equity in the system presented here only earns a risk-free interest rate. This is due to the fact that all the risk components of the investment and underwriting are covered with risk-based capital by the internal risk model, and thus assigned return requirements. Even though we take a risk-adjusted return as our target, we aspire to meet the high, but fair expectations of our investors with regard to the return on total capital placed at our disposal.

At what level should the RORAC target be set?

We are adhering to our long-term objective of a 15% return on our risk-based capital (RORAC) after tax across the cycle, although it will be much more difficult to achieve in an environment in which interest rates are low. This target underlines our fundamental commitment to a long-term increase in our corporate value. We are aiming for a consolidated result of over €2bn for 2010.

What assumptions is this target based on?

In both primary insurance and reinsurance, we are proceeding on the basis of statistically expectable claims experience. Provided there are no significant shifts in the composition of our business portfolio, we reckon with a combined ratio of around 97% of our net earned premiums over the market cycle as a whole, based on an expected average major-loss burden from natural catastrophes of 6.5%. Since we were affected by very severe accumulation loss events at the end of February 2010, i.e. the earthquake in Chile and Winter Storm Xynthia over Europe, we will only be able to achieve our target if random major losses remain below our expectations in the further course of the year. Uncertainties result not only from the random incidence of major individual losses but also from the fact that recession-related exceptional burdens cannot be disregarded in view of the still difficult economic situation. In property-casualty primary insurance, we expect a combined ratio of under 95%.

Embedded value as an additional performance indicator

In life primary insurance and reinsurance and in German health primary insurance, MCEV is one of the foundations of our value-based management.

The life and health primary insurance business, managed and measured on an embedded-value basis, will contribute to the IFRS consolidated profit and thus to reaching the RORAC target, even though IFRS consolidated results are based on the individual financial-year perspective.

Our targets – Ambitious but attainable

In selecting suitable targets, contrasting aspects have to be considered and weighed. On the one hand, undue complexity should be avoided in order to ensure transparency for investors, staff and the public. On the other hand, the challenge lies in reflecting economic realities as closely as possible, avoiding oversimplification, and enshrining added value as the Group's overriding guiding principle. As the above description shows, the background is multifaceted, especially as the parallel use of different performance indicators is unavoidable.

We are convinced that we are on the right track with RORAC as our primary key performance target. Whether and to what extent it is attainable depends in equal measure on the economic parameters and on the random occurrence of major losses. Despite the particular uncertainties of the environment, we will do our utmost to efficiently manage the consequences of the economic crisis.

What do these Group targets mean for Munich Reinsurance Company's individual financial statements?

Munich Reinsurance Company is managed as part of the Group rather than as a separate entity. However, parallel to Group-related business management, individual financial statement specifics, such as the calculation of the claims equalisation provision or the application of the strict lower of cost or market principle to investments, and their impact on the German Commercial Code result, are regularly reviewed, and measures taken where needed in order to manage results. Nevertheless, indicators for the Company result are derived from the Group targets.

In underwriting, we are proceeding on the assumption that with the solid quality of our business and in line with our Group objectives, we can achieve a combined ratio of 98% on the basis of a major-loss burden from natural catastrophes of 6.5% of our net premiums earned. This would be likely to result in an allocation in 2010 to our claims equalisation provision, following the substantial withdrawal made this year. Given the current capital market situation, our return on investment based on market values is unlikely to reach our previous target of 4%. As things stand at present, we expect that we will not be able to emulate the very good German Commercial Code result achieved in the financial year 2009.

Excellence in underwriting – Binding standards for underwriting and pricing

Our value proposition requires that we continually expand our knowledge. It also requires high quality standards for underwriting, pricing, accumulation control and claims management. Only in this way can we be the first port of call for our clients when it comes to addressing risk matters and occupying new and profitable business sectors in future. For this reason, Corporate Underwriting is developing ways of expanding our knowledge of non-life reinsurance business and drafting guidelines and best-practice principles for our reinsurance underwriting. Regular reviews ensure that the quality of our reinsurance business is consistently high and that we respond swiftly to changes and new developments. In close cooperation with the operative units, Corporate Underwriting generates needs-oriented products and services for our reinsurance clients. For life and health reinsurance, this task is assumed by specialists in the Life Division and in Munich Health who, with the help of underwriting guidelines and reviews, also see to it that the business written always meets our high standards.

Parameters

- // Constantly changing, more complex parameters demanding flexibility and tailored solutions
- // Economic crisis apparent in all markets, but initial recovery apparent
- // Profit-oriented underwriting still essential
- // Solvency II on the way – Supervisory architecture in flux

General parameters

More complex environment poses challenge to actuarial practice

Our business environment is one of increasing complexity, with an upward trend in major insurance-relevant events. We are seeing a disproportionate rise in man-made losses in relation to economic activity, due to technological progress, advancing economic and geopolitical interdependencies, and climate change. Concentrations of values are soaring and economic entities as well as regions are becoming ever more interdependent, leading to new risk potentials and accumulation hazards. It is therefore imperative to carry on refining risk models and to translate new findings into actuarial practice.

Demographic change is also leading to fundamental upheavals in many parts of the world. In combination with falling birth rates, increasing life expectancy is placing enormous pressure on pay-as-you-go social security systems. By 2030, every two people employed in Europe will have to finance one person who is not. This means Europeans can only maintain their standard of living and high-quality healthcare in the medium term if they make additional private provision, giving rise to a major opportunity for the private insurance industry.

Many countries are realigning their social security systems to these demographic requirements, but are doing so half-heartedly and inconsistently. In some cases, this is leading to an uncertain legal and political climate, with which insurers will have to cope for the time being. Particularly in highly-developed countries, insurers are having to adjust to the growing target group of older people with their special needs. Speed and flexibility in the design and maintenance of products thus remain important competitive factors.

The regulatory environment for insurance companies is also set to change substantially. As a consequence of the financial crisis, supervisory authorities in Europe and around the world are having to reposition themselves. What is more, new rules for state supervision in Europe (Solvency II) and new accounting standards have implications for insurers' capital requirements and external reporting.

Given the developments described, both the demand for insurance cover and its supply are changing. Munich Reinsurance Company, among the leaders in integrated risk management, can utilise the changing industry dynamics to its advantage and exploit the business opportunities they present.

Economic parameters

As anticipated, the macroeconomic parameters in 2009 were shaped by the crisis on the international financial markets and a global recession, which also affected the insurance industry. From the middle of the year, however, the first signs of an economic recovery became apparent – isolated at first, strengthening later. Prices on the international stock markets rose significantly as of March, and marked price gains were recorded by year-end. Oil prices recovered noticeably over the course of the year.

Economy

Effects of economic crisis felt worldwide in 2009

The **world economy** entered a severe recession in 2009, with **China** and **India** remaining the only notable growth drivers. Other key emerging markets, Japan, Europe and the USA suffered from a shrinking economic output. The slump in global demand led to relatively low inflationary pressure – some industrialised countries even saw price falls. To support the economy, public-spending programmes of historical proportions were launched worldwide, accompanied in some cases by unconventional monetary-policy measures on the part of central banks.

The **USA**, the world's largest insurance market, recorded a distinct decline in economic output overall in 2009, although the economy did recover in the third and fourth quarters. The unemployment rate rose to a historic peak over the year and averaged 10.0% in the fourth quarter when seasonally adjusted. Alongside state measures to prop up the economy, it was also underpinned by relatively robust exports. Year on year, real GDP sank by 2.4%. Consumer prices fell by 0.4%.

The **Japanese economy** shrank for the second consecutive year. After -1.2% in 2008, GDP decreased noticeably by 5.0% in real terms.

The **eurozone** was also hit hard by the crisis. Whereas in the previous year slight real economic growth of 0.6% had been posted, economic performance fell by 4.0% in real terms in 2009. There were significant regional differences, but none of the euro countries recorded positive real growth rates.

In **Germany**, the economy shrank noticeably in 2009 – by 5.0% in real terms – and thus fared somewhat worse than the eurozone average. The unemployment rate rose to 8.6% in the first quarter but, partly due to extensive labour-market policy measures, fell to 7.8% in December. Private consumption, also supported by state transfer payments, had a stabilising effect on the economy. Due largely to the recovery of the global economy, a slight economic upturn was apparent from the second quarter onwards. Consumer prices rose by only 0.4%.

At -4.8%, the fall in real GDP for 2009 was also comparatively sharp in the **United Kingdom**.

The chiefly export-oriented economies of Asia, eastern Europe and Latin America suffered from the sagging global demand in 2009. **China** (+8.7%) and **India** (+7.2%) posted strong economic growth despite considerably restrained momentum. Russia experienced a drastic slump in economic output, owing particularly to much lower raw materials exports. By contrast, the Brazilian economy shrank only slightly, bolstered by relatively robust domestic demand.

Capital markets

Gains in share price indices

After a string of setbacks, the international stock markets recorded marked price gains from March 2009 onwards. Over the course of the year, the EURO STOXX 50 improved by 21.1%. In the USA, the S&P 500 closed 2009 up 23.5%. The DAX gained 23.8% compared with the beginning of the year, while the Japanese Nikkei Index recorded an increase of 19.0% over the year.

The yield on ten-year German government bonds rose from 2.9% to 3.4% in the course of 2009, and ten-year US government bonds also showed a yield increase of 1.5 percentage points from 2.3% to 3.8%.

The European Central Bank lowered its reference interest rate from 2.5% to 1.0%, and the Bank of England took similar measures, cutting its interest rate from 2.0% to 0.5%.

Until early March 2009, the euro lost ground against the US dollar and reached its year-low at US\$ 1.25. This trend subsequently reversed, with the exchange rate rising to US\$ 1.43 at year-end. The pound sterling exchange rate was very volatile, with the euro depreciating over the year as whole from £0.97 at the start to £0.89 at the close. The euro appreciated marginally in value against the Japanese yen, climbing from ¥126.01 at the beginning of the January to ¥133.57 at the end of December.

Insurance industry

Writing business at risk-adequate prices was once more the central issue on the insurance markets in 2009. Due to the financial crisis and its effects on the capitalisation of the reinsurance industry, some appreciable price gains were realised in some cases in the renewals at the beginning of the year and at 1 April and 1 July. For many market players, selective and result-oriented underwriting was still the priority.

The capital base of reinsurers has recovered comparatively quickly from the consequences of the international financial crisis. Large natural catastrophe losses were only recorded in isolated cases. Accordingly, market conditions for reinsurers generally improved less than initially anticipated overall. In the renewals of reinsurance treaties at 1 January 2010, there were therefore marginal price reductions on average.

Premium growth affected by macroeconomic development

Premium development in the insurance industry, particularly in property-casualty insurance, is strongly influenced by the overall economic situation, and further by the effects of the insurance market cycle. Apart from macroeconomic factors, changes in the legal and tax environment play a key role in the market dynamics of life and health insurance.

In general, the negative trends in the global economy also affected insurance markets, although initial estimates indicate that high growth rates were achieved in **China**. The **European markets** showed differing developments. In Spain, it appears that premium volume grew by only 1.2% compared with the previous year, whereas in France it increased by 9%.

Despite the high degree of economic uncertainty, the insurance industry in **Germany** increased its premium income in 2009 by 3.1% according to provisional estimates, compared with growth of only 1.0% in the previous year. Life insurance benefited considerably from single-premium business and posted a significant improvement of 7.1% in premium volume. Property-casualty business saw hardly any growth, with premium increasing by only 0.2%. Premium income in private health insurance rose by 4.0%.

Regulatory changes

National and international efforts continue on the political front to avoid a repeat of the financial crisis by monitoring those markets and their institutions more effectively.

The new insurance supervision system, **Solvency II**, has been under discussion for some time now. After exhaustive consultations by the bodies responsible, the European framework directive, which is to be implemented at the latest by the end of October 2012, was formally adopted by the Council of the European Union on 10 November 2009. The future requirements for risk-adequate financial resources have thus been set, along with those for adequate qualitative risk management and for reporting duties towards supervisory authorities and the public. The associated implementing measures are currently in preparation.

In January 2009, the German Federal Financial Supervisory Authority (BaFin) published **MaRisk (VA)**, a circular on the minimum supervisory requirements for the risk management of insurance undertakings. The circular anticipates Solvency II requirements and is likewise principles-based. This means that within the bounds of the binding minimum requirements, insurers can determine the concrete design of their risk management themselves. In doing so, the insurers consider company-specific risks, the type and scope of their operations, and their business model. The minimum requirements include setting up an internal control and management system (ICS) that provides for adequate risk identification, analysis, assessment, control and monitoring. More information on the Company's risk management and ICS can be found on page 73 in the risk report.

Regulatory environment subject
to changes worldwide

States throughout the world have made insurance supervision regulations more stringent. In Germany, the **Act for Strengthening of the Financial Markets and Insurance Supervision** of 1 August 2009 further extended BaFin's powers of intervention and the insurance companies' reporting obligations. If a company experiences a financial crisis, BaFin can now prevent or limit payments to its group affiliates, for example. In addition, the number of former management board members on an insurance company's supervisory board was limited to two, although BaFin can approve more within a group. The Act lays down requirements for members of supervisory boards with regard to their reliability and professional expertise, and limits the number of memberships of supervisory boards at regulated entities. Furthermore, significant risk concentrations at group level must also be reported to BaFin on a quarterly basis.

At a European level, the European Commission presented proposals for a reorganisation of supervisory architecture. Its objectives include early identification of systemic risks, more effective cooperation between supervisory authorities in emergencies, and thus the strengthening of financial supervision. The **new European Systemic Risk Board** will have the function of recognising and providing due warning of risks at a macroeconomic level for the financial system as a whole. Moreover, a European System of Financial Supervisors is to be created, comprising the national supervisory authorities as well as three new European supervisory authorities for the areas of banking, securities trading and insurance.

Overview and key figures

Despite the difficult market environment, Munich Reinsurance Company's business performed favourably overall in the past year.

In the financial year 2009, the Company wrote gross premiums totalling €18.3bn (16.5bn), a year-on-year increase of 11.1%. Approximately €13.0bn or 71% of premium was written in foreign currency, of which 23% was in US dollars, 16% in Canadian dollars, and 11% in pounds sterling, with some 88% (85%) of our premium income coming from business with non-German clients. As in the past, we adhered strictly to our underwriting policy of risk-adequate prices, terms and conditions. The falling prices for reinsurance cover in the last few years were succeeded in 2009 by improved price levels in many areas. In addition, we achieved a marked rise in premium volume as a result of large-volume transactions in life and health reinsurance.

Our underwriting result before claims equalisation provisions showed a profit of €505m in 2009, compared with a loss of €266m in the previous year. The positive result reflects the fact that it was not necessary to strengthen reserves to the same degree as in the previous year. On the contrary, it was possible in some classes of business to reduce reserves because the claims estimates turned out to have been too conservative. At around €1.0bn (1.3bn), claims costs for major losses were approximately 19% lower than in the previous year. Unlike in 2008, we were largely spared major claims burdens from natural catastrophes in the year under review, but recorded a significant increase in man-made losses as a result of the financial crisis. Noteworthy natural catastrophe losses included the devastating bush fires in the Australian state of Victoria, for which we incurred expenditure of around €97m. Extensive damage was also triggered by Winter Storm Klaus (especially in France and Spain) in January 2009, costing us around €71m. The largest man-made losses were mainly claims in credit and surety reinsurance business, for which our claims costs totalled approximately €343m. An explosion in a Russian hydropower plant also caused a severe loss, giving rise to claims expenditure for us of some €96m.

The combined ratio, which reflects the relation of claims and costs to net earned premiums, came to 98.2% (102.4%). Excluding claims burdens from natural catastrophes, it amounted to 96.8% (97.1%).

The following table shows our expenditure for major losses in the past five years (with the percentage for natural catastrophe losses):

Major losses over €10m (net)¹	2009	2008	2007	2006	2005
€m					
Major losses total	1,037	1,286	1,006	605	2,972
Thereof natural catastrophes	171	622	537	158	2,467

¹ 2007 and earlier adjusted owing to an increase in the threshold for major losses.

We had to withdraw €720m (786m) from the claims equalisation provisions in the year under review, the main reason being the losses caused by the financial crisis. After the changes in claims equalisation provisions, our underwriting result showed a profit of €1,225m (520m).

Our investment result totalled €3,104m, a decrease of €925m compared with the previous year, which had benefited in particular from the special dividend payment of €947m by ERGO Versicherungsgruppe AG. In accordance with German commercial law, some €653m (463m) of the investment result is incorporated in the technical result as interest on technical provisions.

The Company's return on investment (including deposits retained on assumed reinsurance) totalled 4.4% (5.6%) on the basis of carrying amounts. Based on market values, the return was 4.0% (5.0%).

Munich Reinsurance Company's results	2009	2008	2007	2006	2005
€m					
Technical result	1,225	520	-337	-122	-1,706
Investment result without interest on technical provisions	2,450	3,566	2,894	2,339	1,391
Other result	-297	-439	-465	-301	-278
Taxes	-920	-660	-649	-221	-399
Profit/loss for the year	2,458	2,987	1,443	1,695	-992
Net retained profits	1,291	1,567	1,198	1,033	712

In the financial year 2009, we posted a profit for the year of €2,458m. After the transfer of €1,229m to our revenue reserves and consideration of the profit carried forward, net retained profits totalled €1,291m. Of this amount, €1,088m has been earmarked for payment of a dividend of €5.75, and €156m for allocation to the revenue reserves.

Events after the balance sheet date

Under the share buy-back programme decided on by the Company's Board of Management in the fourth quarter of 2009, we repurchased a further 2,760,659 Company shares with a volume of €298m after the balance sheet date up to 28 February 2010.

On 27 February 2010, a severe earthquake with an intensity of 8.8 occurred off the coast of Chile. On the same weekend, Winter Storm Xynthia swept over western and central Europe. Munich Reinsurance Company is exposed in the regions concerned.

Classes of business

In **life reinsurance**, we posted a significant increase in premium volume in the year under review. This increase was primarily due to a number of large-volume transactions we were able to realise with clients in North America, Asia and Continental Europe thanks to our financial solidity and acknowledged risk expertise. On the other hand, the consequences of the global recession had a negative impact on our clients' business.

However, as hitherto, we expect fundamental growth impulses for our future new business to come from such developments as the restructuring of the European solvency regime (Solvency II), the continuing privatisation trends in the provision for old age, long-term care and disability, the need for asset protection and the dynamic expansion of the insurance markets in Asia. In Germany, a trend away from unit-linked life insurance products towards traditional annuity products with guarantees emerged in light of the financial crisis. Moreover, the share of single-premium business in Germany grew strongly. The slightly greater demand for pure risk products is gratifying from the reinsurance perspective, but it is reflected mainly in the companies' retentions, given the low average sums insured. Overall, the trend towards increasing retentions and a conversion of reinsurance treaties from coinsurance to risk-premium basis continued. Due to the financial crisis, our solutions in the area of solvency relief and capital strengthening met with rising interest not only in Germany but also in the Asian life insurance markets.

We achieved a very positive result in life reinsurance thanks to the increased business volume. We anticipate good growth opportunities in the coming years, given such factors as the demand for investment risk protection and the dynamic expansion of the Asian life insurance markets.

In **health reinsurance**, we also posted a strong increase in premium volume in the year under review, mainly owing to a new multi-year quota share treaty in the North American market.

For German statutory health insurance, the past year was dominated by the introduction of the new health fund, leading to a reorganisation of financing in this field as from 1 January 2009. The government simultaneously introduced a new insolvency code for statutory health insurers, which has increased their need for risk protection. At the same time, statutory health insurers are required to invest increasingly in healthcare management. Given the strained financial situation in 2009, they had to minimise their investment risk, a fact that could increase their need for new types of reinsurance solution. Private health insurance, too, is beginning to show a greater need for reinsurance protection against large and catastrophe losses as new advances are made in medicine.

In the Gulf region, we succeeded in maintaining premium income levels, despite the general recession, thanks to our business model combining reinsurance and risk management through our managed care service organisation MedNet. The Gulf region – with its economic and population growth, rise in chronic diseases and increasing privatisation trend in the health sector – promises high growth in the medium to long term.

The result was satisfactory, being slightly up on the previous year.

In **accident reinsurance**, we recorded a marginal decrease in premium volume in the year under review, partly because business with inadequate original rates was scaled back in Germany.

Although the result was significantly better than in the previous year, it was still negative and below expectations. The chief reason for the improved performance was that, unlike in the previous year, there was no need to strengthen the reserves for workers' compensation business.

Our premium income in **liability reinsurance** showed a modest rise in the year under review. Market players' risk awareness was high, leading to realistic estimates of potential losses and therefore to risk-adequate prices. We consistently adhered to our profit-oriented pricing and underwriting discipline and withdrew from unprofitable business.

The year-on-year decrease in the result was essentially triggered by the strengthening of reserves for loss expenditure in the area of professional indemnity and in classes of business affected by the financial crisis, e.g. directors' and officers' liability, as well as by higher major-loss expenditure on account of large man-made losses.

We recorded a significant decline in premium volume in **motor reinsurance**, mainly because of the adverse developments in primary insurance premiums. The pressure on rates persisted on a broad front in Germany and Asia, causing us to systematically withdraw from business where our requirements with regard to risk-adequate prices, terms and conditions could not be realised.

By contrast, the result improved appreciably compared with the previous year and was positive – especially pleasing given that it had been negative in the previous year. The reason for this favourable development was that, unlike in 2008, there was no need to strengthen reserves for motor liability claims due to unexpectedly high losses reported. We will continue to participate very selectively in this business, provided it offers sufficient profitability on a sustained basis.

Premium income in **marine reinsurance** declined slightly over the previous year.

The result, however, was marginally up on the previous year, thanks to lower major-loss expenditure from a comparatively small number of natural catastrophes.

Premium income in **aviation reinsurance** showed a rise in the two volatile classes of aviation and space.

The market for aviation and space risks was impacted by major losses in the year under review. Space business continued to be characterised by overcapacity, in spite of several satellite losses. However, our position as market leader and the conclusion of long-term treaties enabled us to largely avoid the consequences of the considerable pressure on rates. In aviation business, on the other hand, the increase in rates for airlines and non-proportional covers that started at the end of 2008 was maintained.

The result in aviation reinsurance rose moderately compared with the previous year.

In **fire reinsurance**, premium income grew year on year, mainly owing to better rates, e.g. for natural catastrophe treaties (especially with US hurricane exposure). As in the past, we systematically refrained from writing business that did not meet our requirements for risk-adequate prices, terms and conditions.

The result improved significantly compared with the previous year, chiefly due to the low claims costs for major losses.

There was a reduction in premium income in **engineering reinsurance** (machinery, EAR, CAR, EEI, etc.), partly due to our strict profitability criteria and a decline in treaty renewals as a consequence of reduced construction activity in the difficult financial market situation.

We were able to post a slight improvement in the result compared with the previous year.

Under **other classes of business**, we subsume the remaining classes of property reinsurance – burglary, plate glass, hail (including agricultural reinsurance), water damage, contingency, windstorm, livestock and householders' and homeowners' comprehensive reinsurance – as well as credit and fidelity guarantee reinsurance.

Premium volume in these classes was lower than in 2008. The reduction in premium income was especially pronounced in agricultural reinsurance, owing to reduced crop prices, treaty cancellations and lower shares.

While we were able to post a positive figure for the combined underwriting result of these classes of business in the previous year, the result for the year under review was highly negative, the main reason being the increase in major-loss expenditure compared with the previous year. Defaults triggered by the financial crisis led to high claims expenditure in credit and surety business.

¹ The previous years's figures have been adjusted owing to a change in class-of-business allocation.

Claims equalisation provision and similar provisions

The **claims equalisation provision and similar provisions**, whose calculation and recognition are largely governed by law, can substantially influence the underwriting result shown.

The claims equalisation provision serves to mitigate fluctuations in the annual claims requirements of future years, which even in the case of a homogeneous and adequately large insurance portfolio can be significant from one accounting period to the next. Based on past statistics, the provision can smooth the financial effects of the random occurrence of above-average and below-average claims in individual financial years. The claims equalisation provision is established for individual classes of property-casualty business.

The item "similar provisions" combines provisions for major risks established for exceptional cases in underwriting where it is not possible to form a risk community that is sufficiently large and homogeneous to balance the risk within a determinable period of time. Allocations to a provision for major risks have the character of advance claims payments and must be held in reserve until the maximum amount of a possible total loss or the maximum liability determined by actuarial models is reached. Major risks are only insurable if a balance of risks over time is provided through the establishment of reserves over several financial years. A provision for major risks therefore does not serve to balance annual fluctuations but to deal with very rare individual occurrences that have exceptional loss potential. This item embraces provisions for nuclear risks, pharmaceutical product liability risks and terrorism risks.

The balance-sheet item "claims equalisation provision and similar provisions" decreased by €720m to €8,024m in the financial year 2009. Significant withdrawals were made in liability (€475m) and credit business (€431m) to strengthen reserves in these classes because of negative performance, mainly on account of the financial crisis. In addition, the maximum amounts allowed for the claims equalisation provision in engineering and motor had to be reduced by €126m and €82m respectively, owing to lower premium income. By contrast, the positive results in fire and marine business triggered allocations of €208m and €110m to the statutory claims equalisation provisions for these lines. Further allocations made by the Company in the financial year 2009 were €6m (13m) to the provision for terrorism risks, €4m (-1m) to the provision for pharmaceutical/product liability risks, and €1m (-4m) to the provision for nuclear risks.

Investments

Investments principles

Our investment strategy considers supervisory requirements aimed at ensuring optimum security and profitability, with sufficient liquidity at all times, and an appropriate mix and spread. We continue to satisfy all applicable accounting and taxation requirements, and invest only in assets from which we expect an appropriate return, our asset managers paying strict attention to the Company's the risk appetite. As far as possible, we reduce currency risks by matching our expected liabilities with assets in correlated currencies. We also take care that the maturities of our fixed-interest securities are aligned with those of our liabilities. The methods we use to control investment risks are described in detail in the risk report.

Our investment strategy is committed to the principle of sustainability. We aim to invest at least 80% of the market value of our equities and interest-bearing securities in the paper of companies that are included in a sustainability index or satisfy generally recognised sustainability criteria. We use the services of oekom research, an independent rating agency for sustainability, to advise us in this area.

Liquidity

Our **liquidity** is ensured at all times by means of detailed liquidity planning. As a rule, the Company generates significant liquidity from its premium income, from regular investment income and from investments that mature. We also attach great importance to the credit rating and fungibility of our investments. Given the maturity structure of the outstanding bonds and the credit facilities employed (which are, in any case, relatively insignificant in scope), there are no refinancing requirements.

Total	56,359	54,225	53,535	50,484	48,443

Development and structure of investments

The carrying amount of the Company's investments (excluding deposits retained on assumed reinsurance) rose by 3.9% to €56.4bn in the financial year 2009. The following items involved significant changes:

Land, land rights and buildings, including buildings on third-party land

Our investments in real estate are geared to generating an appropriate yield from regular income and growth in value, which requires continually monitoring existing properties and property funds with regard to their long-term profitability, and their location- and property-specific risks. We expanded our portfolio only slightly in the period under review.

Investments in affiliated companies and participating interests

Carrying amounts increased by €3.3bn. In the 2009 financial year, a further €1.8bn was put into investment companies holding special funds for fixed-interest securities. The profits achieved by these investment holding companies were withdrawn by Munich Reinsurance Company and reinvested in participations. This raised the carrying amount of participations by €0.5bn. A capital increase of €0.4bn was carried out at Munich-American Holding Corporation for the acquisition of the Hartford Steam Boiler Group. An amount of €0.5bn for the refinancing of intra-Group loans was allocated to the capital reserve of Itus (formerly Mercur Assistance Holding) in the year under review.

Loans to affiliated companies and to participating interests

The reduction in carrying amounts totalling €203m was mainly due to the granting of loans to ERGO Versicherungsgruppe AG.

Shares, investment certificates and other non-fixed-interest securities

The portfolio reduction of €161m is attributable to a significant decrease in our equity portfolio, the bulk of which comprises shares in European companies.

Bearer bonds and other fixed-interest securities

At €20.9bn, investments in fixed-interest securities decreased by around 4%, primarily due to reallocations from our direct portfolio to investment holding companies. This portfolio reduction was partly offset by positive currency translation effects.

Our balanced investment policy is reflected in our portfolio of fixed-interest securities: some 72% are government bonds or similarly secure instruments for which public institutions are liable; approximately 28% relates to German and US issuers. Additionally, around 8% of our investments are in securities and debt instruments with top-quality collateralisation, mainly German and European pfandbriefs. Over the course of the year, we cautiously expanded this portfolio of credit-exposed fixed-interest securities. Particularly in the first half-year, we took advantage of the extremely pronounced widening of risks spreads between corporate and government bonds to prudently improve our position and secure higher interest income. At 9%, the portfolio of corporate bonds remained practically unchanged compared with the previous year.

As protection against the risks of future inflation and the rise in interest rates typically associated with this, some 12% of our investments are held in bonds for which the interest and redemption amounts are linked to the rate of inflation (inflation-indexed bonds). In this way, we have also compensated to some degree for the risks arising from an inflation-related increase in our claims payment obligations.

Our portfolio of interest-bearing investments has a good rating structure. As at 31 December 2009, approximately 99% of our fixed-interest securities were investment-grade and 93% were rated "A" or better.

Deposits retained on assumed reinsurance business

Deposits retained on assumed reinsurance declined by €2.7bn to €13.8bn year on year, the decrease being mainly attributable to our withdrawal from a quota share treaty.

Valuation reserves

In accordance with Section 54 of the German Accounting Regulations for Insurance Companies, investments accounted for at nominal value are included in the off-balance-sheet valuation reserves as well as investments accounted for at amortised cost. Our off-balance-sheet valuation reserves, i.e. the difference between the fair value of our investments and their book value, increased by €19.5%, or €1.2bn. A detailed breakdown of the reserves is provided in the notes on page 109.

Valuation reserves	31.12.2009	31.12.2008	31.12.2007	31.12.2006	31.12.2005
€m					
Real estate	1,344	1,303	1,309	1,632	1,509
Equity investments	4,920	3,878	9,009	8,884	7,683
Fixed interest securities ¹	918	829	697	531	844
Total	7,182	6,010	11,015	11,047	10,036

¹ As from 2007, investments recognised at nominal value are taken into account as well as investments at amortised cost.

The increase in the valuation reserves on equity investments is due on the one hand to higher earnings potential owing to a strategic realignment of our insurance participating interests and on the other hand to a change in the parameters for calculating discounted net profits. The fair value of investment holding companies with fixed-interest securities in funds was also higher.

Result

In the financial year 2009, our investment result was down €925m on the previous year, which had benefited from the special dividend payment of €947m from ERGO AG.

Investment result	2009	2008	2007	2006	2005
€m

Financial position

Analysis of our capital structure

Investments on the assets side of the balance sheet serve mainly to cover technical provisions (69.1% of the balance sheet total). Equity (14.4% of the balance sheet total) and subordinated bonds classified as strategic debt (6.1%) are the most important sources of funds.

In contrast to liabilities under loans and securities issued, we cannot foresee with certainty how high our liabilities from underwriting business will be and when they will arise. Whereas in property insurance a major portion of the provisions is generally paid out within two years, in life or liability insurance substantial amounts may still be due decades after the contracts were concluded. The currency distribution of our provisions reflects the global orientation of our Group. Besides the euro, our main currencies are the US dollar and pound sterling. We ensure that our business is sufficiently capitalised at all times by monitoring the situation continuously and taking suitable measures, which are dealt with in the section on capital management.

Strategic debt reduced slightly compared with the previous year. As part of our active capital management, we bought back and retired outstanding bonds with a nominal value of around €251m. A detailed analysis of the structuring of this type of funding is provided in the section on strategic debt on page 41.

The economic parameters having stabilised sufficiently in autumn 2009, we decided at the beginning of October to resume our share buy-backs after a seven-month interval. By the next Annual General Meeting on 28 April 2010, we aim to buy back shares with a value of up to €1bn. By 28 February 2010, we had repurchased 6.0 million shares worth €648m. Including the dividends for the financial years 2006–2008, this means we have paid out a total of €7.8bn to our shareholders since November 2006.

Despite this return of capital, our equity increased by €978m in 2009, owing to the high profit for the year.

Since we are an international (re)insurance group, some of our financial resources are subject to restraints on disposal. Supervisory authorities in some countries, for example, require foreign reinsurers to establish premium and reserve deposits with primary insurers. At the reporting date, this involved investments with a volume of €8.1bn (7.1bn).

Asset-liability management

The structure of our technical provisions and other liabilities is the basis for the Company's investment strategy, the main focus of which is asset-liability management: our aim is to ensure that economic factors influence the value of our investments and that of our technical provisions and liabilities in the same way, thus cushioning the effect of capital market fluctuations. For this purpose, we mirror important features of the liabilities, such as maturity patterns, currency structures and inflation sensitivities, on the assets side of the balance sheet by acquiring investments with similar characteristics if possible. If, for instance, there is a strong rise in inflation, our nominal outflows as a result of claims payments increase significantly. This applies in particular to lines of business with long payout patterns, e.g. liability insurance, as inflation accumulates over a number of periods. To an increasing extent we are endeavouring in our asset-liability management to structure our investment portfolio in such a way that inflows from investments increase in line with rising inflation rates.

To configure our asset management as effectively as possible, we also use derivative financial instruments, which are described on page 80 of the risk report.

Capital management

Through active capital management, we ensure that the Company's capital is maintained at an appropriate level. Our available financial resources must always be sufficient to cover the capital requirements determined both by our internal risk model and by the requirements of supervisory authorities and rating agencies. We aim to ensure that our financial strength is such that it enables us to take advantage of measured opportunities for growth, is not significantly affected by normal fluctuations in capital market conditions, and remains at a reasonable level even in the wake of major loss events or substantial falls in the stock markets. At the same time, we also define an appropriate level of Group economic equity as one which does not exceed that required for our operations. Such a needs-based, risk-commensurate capital level makes a decisive contribution to financial discipline in all our business processes.

We return surplus capital to equity holders through attractive dividends and share buy-backs, within the scope permitted by Munich Reinsurance Company's revenue reserves, and provided this does not impair our strategic flexibility or our overall capital strength. At the balance sheet date on 31 December 2009, our revenue reserves under German commercial law accounting amounted to €2,049m. Through proposed share buy-backs of up to €1bn by the 2010 Annual General Meeting, we are consistently pursuing the share buy-back programme announced in 2007. By the end of December 2009, we had bought back a total of 3.2 million Munich Re shares with a volume of €350m. In the interests of our shareholders, we will carefully weigh up the benefit of further buy-backs against the advantages of comfortable capitalisation, also with a view to opportunities for organic and possibly external growth. After completion of the 2009/2010 share buy-backs, the revenue reserves shown as at 31 December 2009, calculated in accordance with German commercial law, will decrease to €1,399m. In addition, subject to the approval of the Supervisory Board and the Annual General Meeting, we intend to pay our shareholders a dividend of €5.75 per share from the net retained earnings for the financial year 2009.

Essentially, we see efficient and transparent capital management – always geared to what is feasible – as an appropriate means of achieving our goal of being recognised as a reliable partner in the capital markets. This should guarantee our ability to raise capital quickly and easily in the capital markets, especially for large potential growth opportunities and the optimisation of our capital structure.

The available capital should not only be adequate but also deployed efficiently. We use our value-based management to set performance targets designed to ensure that every investment achieves a sustainable return commensurate with the risk involved. To limit fluctuations in results owing to major losses, we have also developed guidelines and limit systems within the framework of integrated risk management and corporate underwriting for our reinsurance companies. These guidelines and systems are constantly monitored, and adjusted where necessary. We protect our results and capital against unacceptable fluctuations by means of suitable reinsurance and retrocession covers. We also use asset-liability management and a system of limits to restrict the risks inherent in our investments.

Our internal risk model plays a central role in capital management. We use it to analyse how certain risk scenarios affect segment results and investments. Further information on the internal risk model is provided in the risk report on page 85.

Equity

In the year under review, our equity increased by €978m to €10,760m, or by 10% compared with the previous year. Within the framework of the share buy-back programmes announced in May 2008 and October 2009, we bought back shares to the value of approximately €406m in 2009, which we offset against the revenue reserves. €1,073m of the net retained profits for the previous year was distributed as a dividend to shareholders.

These withdrawals compare with a profit for the financial year 2009 of €2,458m. To strengthen our equity, a total of €1,229m from the profit for the financial year has been allocated to the revenue reserves. Of the remainder totalling €1,291m, €1,088m has been earmarked for the dividend payment and another €156m for allocation to the revenue reserves.

Information in accordance with Section 289 para. 4 of the German Commercial Code and explanatory report of the Board of Management

Composition of the issued capital

As at 31 December 2009, Munich Reinsurance Company's share capital of €587.7m was divided into 197,401,624 registered, no-par-value, fully paid shares. The shares are endowed with full voting and dividend rights, with the exception of the 5,491,447 shares held by Munich Re itself at 31 December 2009 (Section 71b of the German Stock Companies Act). Each voting share carries one vote at the Annual General Meeting. Article 5 para. 1 of the Articles of Association excludes the right of shareholders to have share certificates issued for their shares. Shareholders' participation in the Company's profit is based on the proportion of the share capital they hold (Section 60 of the German Stock Companies Act).

Registered shares – unlike bearer shares – are issued in the name of their owner, whose name, address and date of birth are entered in the Company's register of shareholders together with the number of shares held. This allows Munich Re to communicate directly with the owners. With respect to the Company, the only parties deemed shareholders in accordance with the German Stock Companies Act (Section 67) are those entered in the Company's register of shareholders. This is one of the preconditions for attendance and exercise of voting rights at the Annual General Meeting. For our shareholders, having registered shares means, above all, that they are informed directly, quickly and comprehensively about our Company and its current activities and that they are also personally invited to take part in our Annual General Meeting.

Restrictions on voting rights or the transfer of shares

The listed registered shares are subject to transfer restrictions. The issuing of restrictedly transferable registered shares by Munich Reinsurance Company dates back to the Company's foundation in 1880 and is a very common phenomenon in the insurance industry. Restricted transferability means that these shares may be transferred to another holder only with the Company's consent, which, according to Article 3 para. 2 of Munich Reinsurance Company's Articles of Association, is granted at the Company's discretion. Since the share-trading processes have been made very efficient, the consent requirement does not lead to any delays in entry in the register. In recent decades, it has been granted without exception.

Shareholdings exceeding 10% of the voting rights

Under the German Securities Trading Act, any investor whose shareholding – through acquisition, disposal or other means – attains, exceeds or falls below specified percentages of the voting rights in our Company must notify us and the German Federal Financial Supervisory Authority (BaFin). The lowest threshold for this notification requirement is 3% of the voting rights. We have neither been notified nor do we know of any direct or indirect shareholdings in our Company equal to or exceeding 10%.

Shares with special control rights

There are no shares with special control rights.

System of control for employee share scheme where the control rights are not exercised directly by the employees

Like other shareholders, employees exercise control rights directly on shares issued to them, in accordance with statutory provisions and the Articles of Association.

Statutory regulations and provisions of the Articles of Association regarding appointment and dismissal of members of the Board of Management and concerning amendments to the Articles of Association

The legal parameters for the appointment and dismissal of members of the Board of Management are specified in the Company's co-determination agreement, Articles 13 and 16 of the Articles of Association, Sections 84 and 85 of the German Stock Companies Act, and Sections 121a para. 1 and 7a of the German Insurance Control Act. Munich Re's co-determination agreement and Articles of Association have taken over the legal tenets of the German Co-Determination Act. The Supervisory Board appoints the members of the Board of Management and may dismiss them at any time for good cause. On initial appointment, members of the Board of Management are usually given contracts for a term of between three and five years. Extensions of up to five years are possible and – in exceptional cases – members of the Board of Management may also be appointed by a court of law.

The German Stock Companies Act contains general provisions governing amendments to the Articles of Association (Sections 124 para. 2 sentence 2, and 179-181 of the Act). These state that only the Annual General Meeting can make resolutions on changes to the Articles of Association. In order to be carried, a resolution must receive at least three-quarters of the votes cast by the share capital represented in the vote. The Articles of Association may stipulate a different capital majority (higher or lower) or other requirements, but the Company's Articles of Association do not provide for any such special features.

The German Stock Companies Act contains special regulations on amendments to the Articles of Association where increases and reductions in share capital are concerned (Sections 182-240 of the Act). Under these regulations, all resolutions on capital measures are generally to be made by the Annual General Meeting. Within a self-determined scope, however, the Annual General Meeting can authorise the Board of Management to initiate certain (capital) measures (the authorisations relating to Munich Reinsurance Company are listed below). In all such cases, a resolution of the Annual General Meeting is required that has been adopted by at least a three-quarter majority of the share capital represented in the vote. Where these resolutions are concerned, the Company's Articles of Association again do not provide for other (i.e. higher) majorities or further requirements.

The Annual General Meeting is entitled to transfer to the Supervisory Board the authority to make amendments to the Articles of Association that affect only the wording (Section 179 para. 1 sentence 2 of the German Stock Companies Act). This is the case with Munich Reinsurance Company and has been regulated in Article 14 of the Articles of Association.

Powers of the Board of Management with particular regard to the option of issuing or buying back shares

The powers of the members of the Board of Management are defined in Sections 71 and 76 to 94 of the German Stock Companies Act. The Board of Management has the following powers to issue and buy back shares (the complete wordings of the relevant resolutions and provisions in the Articles of Association can be viewed on our website:

// The Annual General Meeting of 22 April 2009 authorised the Company under agenda items 5 and 6, pursuant to Section 71 para. 1 item 8 of the German Stock Companies Act, to buy back shares until 21 October 2010 up to a total amount of 10% of the share capital at the time of the Annual General Meeting resolution (€587,725,396.48). The shares acquired plus other own shares in the possession of

the Company or attributable to the Company in accordance with Section 71a ff. of the German Stock Companies Act may at no time amount to more than 10% of the share capital. The shares may, in accordance with the provisions of the authorisation, be acquired in various ways: via the stock exchange, via a public purchase offer to all shareholders, via a solicitation to all shareholders to submit sales offers (request to sell) or via a public offer to all shareholders of the Company to exchange Munich Re shares for shares in another listed company as defined in Section 3 para. 2 of the German Stock Companies Act. In so doing, it may buy back shares amounting to a maximum of 5% of the share capital using derivatives in the form of put options, call options or a combination of the two. The Board of Management is authorised to use shares thus acquired for all legally admissible purposes, in particular those specified in the authorisation, whilst excluding subscription rights. Among other things, the Board of Management is empowered under Section 71 para. 1 item 8 sentence 6 of the German Stock Companies Act to retire the shares without requiring further approval from the Annual General Meeting.

The Board of Management availed itself of this authorisation by its resolution of 1 October 2009. By 31 December 2009, a total of 3.2 million shares had been purchased for an overall price of €350m. As part of the 2008/2009 share buy-back programme, 0.6 million own shares were acquired between January and March 2009 for an overall price of €56.5 m. As announced in April 2009, these shares and the 7.1 million shares already repurchased in 2008, as well as 1.3 million shares acquired using put options, were retired in a simplified process.

- // The Annual General Meeting of 28 April 2005 authorised the Board of Management to issue, with the consent of the Supervisory Board, convertible bonds or bonds with warrants on one or more occasions up to 27 April 2010 for a maximum nominal amount of €3bn with or without a limited maturity period. Shareholders are generally entitled to a subscription right in respect of these bonds, but the Board of Management is authorised, with the consent of the Supervisory Board, to exclude this subscription right in the cases specified in the authorisation. The holders of such bonds may be granted conversion or option rights in respect of new shares issued by the Company up to a maximum amount of €100m of the share capital, in accordance with the respective bond or warrant conditions; as a precautionary measure, capital of €100m was conditionally authorised under Article 4 para. 4 of the Articles of Association.
- // Under Article 4 para. 1 of the Articles of Association, the Board of Management is authorised, with the consent of the Supervisory Board, to increase the Company's share capital at any time up to 21 April 2014 by an amount of up to €280m by issuing new shares against cash or non-cash contribution (Authorised Capital Increase 2009). In accordance with the above-mentioned provisions of the Articles of Association, it may exclude subscription rights. The shares issued overall on the basis of this authorisation subject to the exclusion of shareholder subscription rights may not exceed 20% of the existing share capital at the time this authorisation is exercised for the first time.
- // Under Article 4 para. 2 of the Articles of Association, the Board of Management is authorised to increase the share capital at any time up to 18 April 2011 by an amount of up to €5m by issuing new shares against cash contribution (Authorised Capital Increase 2006). The subscription right of shareholders is excluded insofar as this is necessary to allow the shares to be issued to employees of Munich Reinsurance Company and its affiliated companies.

The above-mentioned authorisations to issue or buy back shares are within the range of what is customary in the market and allow the Company to engage in active capital management. They enable it to cover any capital needs, even at short notice, for taking swift and flexible advantage of market opportunities in different fields of business. As demonstrated by the Company's share buy-backs, the authorisations also offer the opportunity to return capital that is no longer required to the equity holders.

Significant agreements which take effect, alter or terminate upon a change of control following a takeover bid, and resultant implications

Based on our underwriting guidelines, our reinsurance agreements generally include a clause that grants both parties to the agreement a right of extraordinary cancellation in the event that "the other party merges with another company or its ownership and control undergoes a material change". Such or similar clauses are typical of the industry. Munich Reinsurance Company's long-term incentive plan for members of the Board of Management, senior management, and top executives in Munich Re's international organisation, which is explained in detail in the remuneration report, provides for special exercise options in the event of a change of control.

Compensation agreements concluded with members of the Board of Management or employees for the event of a takeover bid

There are no compensation agreements with members of the Board of Management or employees for the event of a takeover bid.

Strategic debt

We define as strategic debt all financial instruments with the character of outside financing that do not have a direct link with our operative business. It supplements our financial resources and is essentially designed to reduce the cost of capital and ensure that we have sufficient liquidity at all times.

Total	4,761

¹ With original nominal value of €3,000m (thereof €2,900m outstanding).

² With original nominal value of €1,500m (thereof €1,349m outstanding).

The subordinated bond with an original volume of €1.5bn issued by Munich Reinsurance Company in June 2007 is a perpetual bond, but callable by us from ten years after the date of issue. The terms of the Munich Reinsurance Company subordinated bonds issued in 2003 are limited. These subordinated bonds with nominal values of €3.0bn and £300m will mature in 2023 (euro subordinated bond) and 2028 (pound sterling subordinated bond) and are callable by us for the first time on 21 June 2013 and 21 June 2018 respectively.

In 2009, we bought back and retired subordinated bonds with a nominal value of around €251m.

The Company strengthens its capitalisation with these subordinated bonds, which are recognised in part as own funds by the German Federal Financial Supervisory Authority (BaFin).

Furthermore, in 2009 Munich Reinsurance Company assumed a strategic bank loan totalling US\$ 250m from Munich Re America Corporation, which we show under amounts owed to banks. The residual term of this liability is 2012.

Solvency

Solvency in the case of insurance companies is generally understood to be the ability of an insurer to always meet the obligations assumed under contracts. In concrete terms, this means an insurance company must fulfil specific minimum capital requirements. To calculate solvency, the minimum equity required for the volume of business (required solvency margin) is compared with the eligible equity actually available (actual solvency margin) on the basis of the company's financial statements. In determining the eligible capital elements, the equity is adjusted; specifically, it is increased by portions of the subordinated liabilities and reduced by intangible assets, participations in banks, financial services institutions and financial services companies. Munich Reinsurance Company's equity capital still amounts to several times the statutory minimum requirement.

Analysis of the cash flow

Munich Reinsurance Company's cash flow is strongly influenced by our operating business. We generally first collect the premiums for the risks assumed and do not make payments until later, in the event of a loss. Cash flow statements of insurance companies are therefore of limited relevance.

The **cash inflows from operating activities** remained clearly positive, owing to increased premium volume with a moderate overall claims burden. In addition, there was a reduction in accounts receivable and deposits retained on assumed reinsurance.

Opposite trends resulted in **cash outflows from investing activities**. On balance, outflows for allocations of capital to affiliated companies and company acquisitions exceeded inflows from reductions in our portfolio of equities and investment funds.

The share buy-back programme resumed in autumn 2009, the repayment of liabilities and Munich Reinsurance Company's dividend payment for the past financial year resulted in **cash outflows for financing activities**.

In the year under review, cash – which encompasses cash with banks, cheques and cash in hand – rose by €57m to €216m overall.

Other success factors

Beyond financial performance, we also aim to secure Munich Re's long-term economic success with other factors.

These include:

- // Being the first "port of call" for clients in connection with all risk matters
- // Firm commitment to devising innovative coverage concepts for new and complex risks
- // Corporate responsibility towards employees, society and the environment
- // Efficient business processes for managing our Group and identifying or avoiding risks

Clients and client relationships

Munich Reinsurance Company works together with over 4,000 corporate clients from more than 160 countries – not only traditional insurers but also the insurance subsidiaries of industrial companies (so-called captives).

Clients benefit from financial strength and risk knowledge

As reinsurers, we aim to deploy our extensive risk knowledge to develop individual solutions for our clients to meet their complex needs. We therefore provide companies wishing to cede insurance risks with the full range of underwriting products. In so doing, we do not shy away from new or complex risks and regularly assume a pioneering role in the development of new coverage concepts. Our clients thus benefit from a unique combination of financial strength and risk knowledge. In line with their specific needs, we offer them not only risk transfer products but also consulting and other services, giving precedence to a holistic view of client relationships. Our client management is geared to providing our clients with optimum solutions for all risk transfer requirements and intensifying cooperation with them. In addition, we constantly strive to enhance our service and, to this end, draw on the findings and suggestions obtained from client surveys.

Proximity to our clients is important to us: with branches and subsidiaries around the world, we ensure that they can always find us where and when they need us. And by combining international know-how with in-depth knowledge of local conditions, we are always in a position to propose individual solutions.

As a special service for our clients, we staged more than 100 seminars and workshops on topics related to insurance, reinsurance and risk management in 2009, both in Munich and at our many offices and subsidiaries around the world. Our two scholarship programmes, the "Alois Alzheimer Scholarship – Development programme for high potentials" and the "Horst K. Jannott Scholarship – Management programme for future executives", also foster close collaboration with our cedants. More than 540 former scholarship holders from all over the world are registered in the Munich Re Alumni Network, established at the end of 2007.

Research and development

Thoroughly understanding risks – that is the basis of Munich Re's business model. This requires, in particular, constantly analysing known risks for significant changes in their structure or occurrence probability and identifying new risks at an early stage.

Structural or economic change processes, such as those resulting from climate change, new legislation, more complex supply chains or outsourcing, offer new business opportunities. Our Special Enterprise Risks (SER) unit investigates alterations in the transfer needs of our clients and uses the findings to develop new products. A good example is an innovative insurance solution for covering the risk of a possible performance deterioration in photovoltaic modules. The new product offers module producers a greater degree of business certainty and allows the purchasers of photovoltaic modules, such as the operators of solar parks, to finance photovoltaic installations more easily and with increased flexibility.

Innovative solutions that benefit our clients also regularly emerge in other divisions. Here are two examples from the past year:

The Insurance4renewables initiative of the Global Clients/North America Division demonstrates how the challenges of climate change can be taken up and translated into business. Together with partners RSA Insurance Group (RSA) and CarbonRe, with support from the Global Environment Facility (GEF) and the United Nations Environment Programme (UNEP), Munich Re offers tailor-made products for projects connected with renewable energy in developing markets, substantially supporting their advance.

In designing a policy for Employment Practice Liability Insurance, Munich Re and the recently acquired HSB Group have demonstrated their successful cooperation in research and development. This jointly developed innovative product covers small and medium-sized companies in the USA against lawsuits brought by employees or clients on the grounds of discrimination or harassment.

Organisationally, too, Munich Re is adjusting the structure of its research and development to the constantly changing business environment. An enhanced knowledge management strategy, for example, has linked the activities of more than 700 experts more closely to the business we write. In cross-divisional projects, knowledge management comes up with concrete solutions for our clients and carries out excellence initiatives for underwriting and claims management. Munich Re has also invested in a state-of-the-art online platform to ensure that our first-class expertise continues to be effectively used internally and externally and to optimise interdisciplinary cooperation and information exchange with clients.

Staff

In our human resources work, we focus firmly on a corporate and leadership culture that rewards performance, promotes individual responsibility and facilitates personal development. Our primary aim is to win the best talent and optimally deploy our staff throughout all fields of business, operating regions and subsidiaries. Joint succession planning at top management level is well established. And a forward-looking platform is in place for Munich Re's job market. Advertisements are placed globally on all the Group's intranet and internet online job markets and on over 70 job portals. This enables us to make known on an ongoing basis our requirements for high-performing, interdisciplinarily networked and highly competent specialists.

An average of 3,969 (3,649) staff were employed at Munich Reinsurance Company in 2009, an increase of 9%.

Internationally standardised HR tools

In 2009, we transferred significant HR tools to units in our international organisation: our performance management system, our process for developing future candidates for top management, and our competence model, which translates our cultural guiding principles into concrete action requirements.

2009 also saw the extension of our employee survey on the leadership performance of our managers to the international organisation. By monitoring leadership throughout the Group by means of surveys and establishing a consistent dialogue between managers and staff worldwide, we underscore our ambitious requirements for management performance at Munich Re.

We also give high priority to the qualifications and personal development of our staff. We support the enhancement of skills and excellence in business-specific functions by means of competence profiles, curricula and consistent quality assurance. The career development of our specialists is also of central importance to us.

Systematic succession planning remains a critical success factor. We invest consistently in training, programmes for students and trainees, and our business-specific training programme for engineers. In addition, as part of Munich Re's repositioning, we have sharpened our employer value proposition. The main aspects of this are interdisciplinary competence, a wide range of jobs, personal development opportunities and a value-based corporate culture. With this clear profile, even greater focus on the relevant target groups and attractive graduate trainee programmes, we are positioned to compete globally for the best talent.

An average of 37 (37) trainees were employed at the Company last year, while ten staff from four different years were enrolled on a training-integrated Master of Science course.

Our medium- and long-term HR planning is conducted with the operational units and is an important basis for our HR work, which is closely geared to business requirements. Our remuneration models and incentive systems are systematically linked to agreed objectives and based on financial results. Company pensions are a central component of our human resources policy, as are the arrangements we offer to help staff combine career and family.

Engagement Index of 82% indicates staff satisfaction

A measure of the quality of our HR work is the Engagement Index, the result of a survey on staff satisfaction, commitment and motivation performed at our Munich location at the end of 2008. Munich Re achieved a positive overall result of 82%. This rating exceeds both the TP-ISR German National Norm (74%) and the TP-ISR Global Financial Service Companies Norm (78%).

Corporate responsibility

Munich Re is convinced that long-term success is only possible if we take due account of economic, ecological and social requirements in our operations. This fundamental understanding is anchored in our mission statement and given concrete expression in our guiding principles for corporate responsibility. In this area, we concentrate in particular on

- // the development of new, needs-based products and solutions,
- // an investment policy based on sustainability criteria,
- // open dialogue with our stakeholders, and
- // active responsibility towards employees, society and the environment.

Principles of UN Global Compact as guidelines

To make our understanding of corporate responsibility values more clearly visible inside and outside our Group, Munich Re joined the United National Global Compact in August 2007. Its ten principles offer us important action guidelines for anchoring corporate responsibility even more firmly in the processes relating to our core business.

A significant role in this connection is played by corporate governance. We fulfil all the recommendations of the German Corporate Governance Code and comply with corporate governance rules in all the markets in which we operate.

Our actions are also guided by our own codes of conduct, implemented by the reinsurance group in 2006, by MEAG in 2007, and by ERGO in 2008. Each code specifies our rules for legally impeccable conduct, based on ethical principles, and describes our understanding of the relevant values. They contain regulations that are binding on all employees, in particular for dealing with conflicts of interest.

Given that we manage substantial investments worldwide, we carry substantial responsibility in the area of asset management. In April 2006, Munich Re became the first German company to sign the UN Principles for Responsible Investment (PRI), which we played a prominent role in helping to establish. Our globally binding General Investment Guidelines (GIG) in place since 2005 specify that our investments in shares, corporate bonds, bank bonds and government bonds must meet certain sustainability requirements. We invest at least 80% of the market value of our investments in assets that are included in a sustainability index like the Dow Jones Sustainability or satisfy generally recognised sustainability criteria. In addition, we have tightened our sustainability criteria for corporate and bank bonds since 2007 and are convinced that taking account of such criteria in our investments will have a favourable effect on risk and return in the long term.

Munich Re shares included
in sustainability indices
since 2001

The various indices we are listed in show that Munich Re is an attractive investment for investors who follow a socially responsible investment (SRI) approach. Since 2001, for instance, our shares have featured in the Dow Jones Sustainability Index (the world's leading sustainability index) and the FTSE4Good.

Although as a service provider Munich Re places comparatively little burden on the environment, our business is inextricably linked with ecological issues such as climate change. The growing number and greater intensity of weather-related natural catastrophes mean a rising trend in loss amounts as well. A particular focus of our commitment is therefore on climate protection: we have long been contributing our specialist knowledge to numerous organisations and associations concerned with global warming. We have been analysing aspects of climate change for over 35 years, with a view to counteracting its impact. This knowledge is incorporated into our investment policy, risk management and product development.

As an internationally operating group, Munich Re also accepts its responsibility towards the communities in which we live and work. The focal points of our social commitment are the active promotion of science and the support of socially disadvantaged youngsters and people in need. In addition, we have established ourselves as a patron of the arts and culture. The foundations we have set up play an important part, and they contribute substantially to sustainable development throughout the world.

Munich location carbon-neutral
since 2009

Preserving our natural resources is a contribution to value-based management, as our economic success is inseparably linked with protecting people, the environment, and physical resources. Our Group-wide activities are focused on reducing greenhouse gas emissions. In 2007, we adopted a carbon-neutrality strategy for reinsurance, and we have already reached the first milestone: since 2009, business activities at our Munich location have been carbon-neutral. All our international reinsurance operations will follow suit by 2012. To achieve this, we are pursuing a fourfold strategy:

- 1) Increasing our energy efficiency: Reducing carbon emissions by 10% per employee
- 2) Purchasing green electricity
- 3) Investing in renewable energy projects: Compensating for carbon emissions and achieving carbon credits
- 4) Making up for inevitable emissions through the purchase and/or retirement of emission credits

Munich Re has had an ISO 14001-certified environmental management system in place at its Munich head office since 2000. Our Munich and Milan offices have been using only green electricity since 2008.

Selectively promoting scientific work and sponsoring cultural and social projects is a key part of our corporate responsibility. Munich Re supports a large number of scientific institutions globally. For example, since 2008 we have been collaborating with the London School of Economics and Political Science (LSE) to advance research into the economic consequences of climate change. And since its foundation in 1922, the Munich University Society has been housed on Munich Re premises. In the field of culture, our sponsorships include the pan-European Gustav Mahler Jugendorchester, which we have supported since 2002.

Security and availability

Ensuring the protection of persons, information and infrastructure is of fundamental importance for the Company. The same applies to our ability to maintain business operations when human errors occur, protective measures fail, or new operational risks occur.

Meeting these objectives requires professional risk management in all operational and central units. Central responsibility for the coordination and monitoring of the relevant activities lies with Group Security and Continuity Management (GSCM), a unit located in the Integrated Risk Management Division. We focus particularly on an appropriate cost-risk relationship and on the consistency and balance of the loss prevention and minimisation measures taken. Headed by the Chief Security Officer (CSO), GSCM ensures that the relevant processes and guidelines are implemented, updated and complied with throughout the Group. It reports to the GSCM committee of the Board of Management. The CSO is also responsible for coordinating the protection of persons, property and information, as well as availability management. He supervises a global network of specialists from reinsurance, primary insurance and asset management with interfaces to the compliance officers, to internal audit, to data protection officers and to the operational units for protection of persons and property, as well as IT security. In addition, he is in charge of the security training and awareness programme for Munich Re employees, geared to developing the security culture as a cornerstone of a successful protection concept.

Corporate governance statement

Munich Reinsurance Company's corporate governance statement comprises (1) the declaration in accordance with Section 161 of the German Stock Companies Act and (2) the report of the Chairman of the Supervisory Board on the Company's corporate governance within the meaning of item 3.10 of the German Corporate Governance Code, including the remuneration report in accordance with item 4.2.5 of that Code and the disclosures as per Section 289a para. 2 items 2 and 3 of the German Commercial Code.

1. Declaration of the Board of Management and Supervisory Board of Munich Reinsurance Company in accordance with Section 161 of the German Stock Companies Act, dated November 2009

"Münchener Rückversicherungs-Gesellschaft Aktiengesellschaft in München fulfils all the recommendations of the German Corporate Governance Code of 18 June 2009 (published on 5 August 2009) and will continue to do so in future. Since the last declaration of conformity in November 2008, Münchener Rückversicherungs-Gesellschaft Aktiengesellschaft in München has fulfilled all the recommendations of the German Corporate Governance Code of 6 June 2008 (published on 8 August 2008)."

This declaration is permanently accessible on our internet website.

Munich Reinsurance Company also complies with all the proposals of the German Corporate Governance Code.

2. Corporate governance report

It is our conviction that good corporate governance creates lasting value. We therefore apply the highest standards to our operations and activities, complying with all the recommendations and proposals of the German Corporate Governance Code.

Munich Re Code of Conduct

Beyond this, we have our own Munich Re Code of Conduct specifying high-level ethical and legal requirements that must be met by employees. This document is published on our website.

In our Code of Conduct we clearly state our views on corporate integrity, i.e. legally impeccable behaviour based on ethical principles. At the same time, the Code is an expression of our understanding of value management. The Code of Conduct contains regulations that are binding on all Munich Re employees including the management, in particular for dealing with conflicts of interest. Furthermore, it outlines a procedure for reporting legal infringements or contraventions, which allows the Company to respond promptly even to the suspicion of irregularities and to prevent any form of financial crime.

How we view corporate governance

Corporate governance stands for a form of responsible company management and control geared to long-term creation of value. One of our particular aims in this context is to foster the confidence of investors, clients, employees and the general public. Also of great relevance for us are efficient practices on the Board of Management and Supervisory Board, good collaboration between these bodies and with the companies' staff, and open and transparent corporate communications.

Continually improving our good corporate governance is an important principle underlying our business activities.

What rules apply to Munich Re?

As a result of its international organisation, Munich Re has to consider corporate governance rules in different national legal systems. Clearly, we observe not only the respective national standards but also internationally recognised best practices. In Germany, where Munich Reinsurance Company has its headquarters, corporate governance rules are laid down above all in the German Stock Companies Act and the German Corporate Governance Code. Also applicable to Munich Reinsurance Company is the German Act on the Co-Determination of Employees in Cross-Border Mergers (MgVG) and a co-determination agreement concluded in December 2008 on the basis of the MgVG; these provisions supersede those of the German Co-Determination Act. The co-determination agreement is published on our website.

The German Corporate Governance Code, which entered into force in 2002 and has since been amended several times, contains the main legal rules that must be observed by German listed companies. In addition, it includes recommendations and proposals based on nationally and internationally recognised standards of good and responsible management. Every year, Munich Reinsurance Company's Board of Management and Supervisory Board publish a declaration stating how far the Code's recommendations have been and will be complied with. The current declaration of conformity can be found on page 49.

Corporate legal structure

Munich Reinsurance Company is a joint-stock company (“Aktiengesellschaft”) within the meaning of the German Stock Companies Act. It has three governing bodies: the Board of Management, the Supervisory Board and the Annual General Meeting. Their functions and powers derive from the relevant legal provisions, the co-determination agreement and the Articles of Association, which are published on our website.

The principle of parity co-determination on the Supervisory Board has been maintained as a result of the relevant provision in the co-determination agreement, and strengthened by taking into account staff employed in the rest of Europe.

Board of Management

Duties and responsibilities

The Board of Management is responsible for managing the Company, setting objectives and determining strategy. In doing so, it is obliged to safeguard Company interests and endeavour to achieve a long-term increase in the Company’s value. The Board of Management must ensure compliance with statutory requirements and internal company directives, and is responsible for effecting adequate risk management and risk control in the Company. The Chairman of the Board of Management provides for homogeneous management of the Company, which he represents especially vis-à-vis the authorities, the press and associations.

Internal regulation and working procedure

Pursuant to Article 16 of the Articles of Association, the Board of Management must comprise a minimum of two persons; beyond this, the number of members is determined by the Supervisory Board. Munich Reinsurance Company’s Board of Management had nine members in the 2009 financial year. An overview of its composition and distribution of responsibilities can be found on page 120. Additional information on individual members of the Board of Management is available on our website. Since 1 January 2006, the Board of Management has had two committees – one for Group matters and one for reinsurance – in order to enhance the efficiency of its work. Rules of procedure issued by the Supervisory Board regulate the work of the Board of Management, in particular the allocation of responsibilities between the individual Board members, matters reserved for the full Board of Management, and the required majority for Board of Management resolutions. The full Board of Management decides on all matters for which the law or the Articles of Association prescribe a decision by the Board of Management. In particular, it is responsible for matters requiring the approval of the Supervisory Board, for items which have to be submitted to the Annual General Meeting, for tasks which constitute fundamental management functions or are of exceptionally great importance, and finally for significant personnel issues at top management level.

Meetings of the Board of Management take place as required, but at least once a month. The members of the Board of Management cooperate closely to the benefit of the Company and aim to reach unanimous decisions.

Composition and working procedure of the Board of Management committees

The **Group Committee** comprises the Chairman of the Board of Management and at least one other member of the Board of Management. As in the past financial year, its current members are Nikolaus von Bomhard, Jörg Schneider and the Chief Risk Officer of Munich Reinsurance Company, Joachim Oechslein. The Chairman of the Board of Management is also Chairman of the Group Committee. The Group Committee decides on all fundamental matters relating to its members' divisions unless the full Board of Management is mandatorily responsible. In addition, it prepares decisions that have to be taken by the full Board.

The **Reinsurance Committee** comprises those members of the Board of Management that do not sit on the Group Committee, i.e. Torsten Jeworrek, Ludger Arnoldussen, Thomas Blunck, Georg Daschner, Peter Röder, Wolfgang Strassl and Joachim Wenning. A further member, as in the past business year, is the Chief Financial Officer for Reinsurance, Hermann Pohlchristoph. The Chairman of the Committee is appointed by the Supervisory Board. In the period under review, this office was held by Torsten Jeworrek. The Reinsurance Committee decides on all fundamental matters relating to the business field of reinsurance except where the full Board of Management is mandatorily responsible.

The committee meetings are held as needed, and usually take place every two weeks.

Collaboration between Board of Management and Supervisory Board

The Board of Management and Supervisory Board cooperate closely to the benefit of the Company. The Board of Management coordinates the Company's strategic approach with the Supervisory Board and discusses the current state of strategy implementation with it at regular intervals. It reports regularly to the Supervisory Board about all questions relevant to the Company. The Supervisory Board has defined the Board of Management's information and reporting requirements in detail. Specific types of transaction such as investments and divestments of substantial size and individual capital measures (e.g. according to Article 4 of the Articles of Association) generally require the Supervisory Board's consent. Beyond this, the Board of Management reports to the Audit Committee on specific topics falling within the latter's scope of responsibility. The Chairman of the Board of Management keeps the Supervisory Board informed about all significant business transactions.

Supervisory Board

The Supervisory Board monitors the Board of Management and gives counsel where appropriate. Certain transactions require its approval, but it is not authorised to take management action. The Supervisory Board also appoints the external auditor of the financial statements. Remuneration of the members of the Supervisory Board is regulated in Article 15 of the Articles of Association, i.e. is determined by the shareholders. A breakdown is provided on page 70 ff.

In compliance with the Articles of Association, Munich Reinsurance Company's Supervisory Board has a total of 20 members. Half are elected representatives of the employees, and half representatives of the shareholders, elected by the Annual General Meeting. Following the merger of Münchener Rück Italia S.p.A. with Munich Reinsurance Company, the opportunity was taken to modernise employee co-determination on the Company's Supervisory Board. Previously, the right to participate in elections of employee representatives to the Supervisory Board had been restricted to Munich Re employees working in Germany. Now employees of Group companies in the European Union (EU) and European Economic Area (EEA) may also participate. The new arrangement was applied for the first time in the regular election of Munich Reinsurance Company's Supervisory Board for a new term of office in April 2009. Employee representatives on the Supervisory Board will in future be elected by a European electoral board, made up of members from employee representative bodies and

employees. Every EU/EEA member country in which at least 10% of the total Munich Re workforce is employed has a seat on the Supervisory Board. Munich Re's fields of business are to be adequately represented on the Supervisory Board. The distribution of the seats apportionable to Germany for senior executives and union representatives is based on the MgVG. Supervisory Board resolutions on the nomination of candidates for election to the Supervisory Board at the Annual General Meeting only require the majority of votes cast by the Supervisory Board members representing the shareholders.

Internal regulation and working procedure

An overview of the members of the Supervisory Board can be found on page 121 ff. Additional information on the current members of the Supervisory Board (shareholder representatives) is available on our website.

The Supervisory Board has established its own rules of procedure, specifying responsibilities, work processes and required majorities. In July 2009, it also adopted separate rules of procedure for the Audit Committee. As provided for in the German Co-Determination Act and included in the provisions of Article 12 of the Articles of Association, the Chairman of the Supervisory Board and his first deputy must be elected by a majority of two-thirds of its constituent members. If a second vote is needed, the shareholder representatives elect the Chairman of the Supervisory Board, and the employee representatives his first deputy, by a majority of the votes cast in each case.

The Supervisory Board is quorate if all its members have been invited to the meeting or called upon to vote and if ten members including the Chairman or alternatively 15 members participate in the vote. Members of the Supervisory Board unable to attend in person may vote in writing. In addition, votes may be taken between meetings in writing, by phone or in similar form if the Chairman of the Supervisory Board so determines. Subject to the same precondition, whole meetings may be conducted by means of telecommunications (e.g. as a videoconference), or individual members may take part in this fashion.

The Chairman of the Supervisory Board is authorised to make declarations on the Supervisory Board's behalf. He signs minutes, copies of resolutions and other Supervisory Board documents and publications.

Composition and working procedure of the Supervisory Board committees

Munich Reinsurance Company's Supervisory Board has set up five committees: the Standing Committee, the Personnel Committee, the Audit Committee, the Conference Committee, and the Nomination Committee. The main committee responsibilities are described below. As a result of the changes on the Supervisory Board after the elections at the Annual General Meeting in 2009, the composition of most of the committees altered during the year.

The **Standing Committee** prepares Supervisory Board meetings and decides on matters of Company business requiring the Supervisory Board's approval insofar as the full Supervisory Board or another committee is not responsible. It makes amendments to the Articles of Association that only affect the wording, and decides on the attendance of guests at Supervisory Board meetings. Besides this, it prepares the annual declaration of conformity with the German Corporate Governance Code, in accordance with Section 161 of the German Stock Companies Act, and the Supervisory Board's report about the Company's corporate governance in the annual report. Every year, it reviews the efficiency of the Supervisory Board's work and submits appropriate proposals to the full Supervisory Board where necessary. Subject to the rules concerning matters for which the Personnel Committee is responsible, it also approves certain legal transactions of the Company with members of the Board of Management and Supervisory Board or parties related to them. If the Chairman of the Supervisory Board is unable to attend, it determines the Chair of the Annual General Meeting.

Members of the Standing Committee are Dr. Hans-Jürgen Schinzler (Chairman), Herbert Bach, Hans Peter Claußen, Wolfgang Mayrhuber and Dr. Bernd Pischetsrieder. Up to the end of 2009 Annual General Meeting, the members of the committee were as follows: Dr. Hans-Jürgen Schinzler (Chairman), Herbert Bach, Dr. Bernd Pischetsrieder, Dr. Albrecht Schmidt and Josef Süßl.

The **Personnel Committee** prepares the appointment of members of the Board of Management and, together with the Board of Management, concerns itself with long-term succession planning. It also prepares the Supervisory Board's resolution on the remuneration system for the Board of Management, including the total remuneration of the individual members of the Board of Management. Its responsibility for fixing the Board of Management remuneration has ceased, owing to changes in the relevant legal provisions. The Personnel Committee also represents the Company vis-à-vis the members of the Board of Management and is responsible for other personnel matters involving members of that Board unless these are issues that have to be dealt with by the full Supervisory Board. It approves certain legal transactions between the Company or affiliated companies and members of the Board of Management or parties related to them. It also decides on secondary occupations that members of the Board of Management may pursue and seats they hold on the boards of other companies.

Members of the Personnel Committee during the whole of 2009 were Dr. Hans-Jürgen Schinzler (Chairman), Herbert Bach and Dr. Bernd Pischetsrieder, and this continues to be its current composition.

The **Audit Committee** prepares Supervisory Board resolutions on the adoption of the annual Company financial statements and approval of the Group financial statements, reviews the financial reporting, discusses the quarterly reports, and takes delivery of the audit reports and other reports and statements by the external auditor. The committee monitors the accounting process, including the effectiveness of the Company's internal control system, the compliance system, the risk management system and internal audit system. Furthermore, it initiates the decision on the appointment of the external auditor and monitors the latter's independence and quality. It appoints the external auditor for the Company and Group financial statements, determines focal points of the audits and agrees on the auditor's fee for the annual audit; the same applies to the review of the half-year financial report. The requisite statements are given by the Chairman of the Audit Committee on the basis of these resolutions. In addition, together with the Board of Management, it prepares the annual discussion of the risk strategy held before the Supervisory Board and discusses any changes or deviations from the risk strategy with the Board of Management during the year.

Members of the Audit Committee are Prof. Dr. Henning Kagermann (Chairman), Christian Fuhrmann, Marco Nörenberg, Anton van Rossum and Dr. Hans-Jürgen Schinzler. Up to the end of 2009 Annual General Meeting, the members of the committee were as follows: Dr. Albrecht Schmidt (Chairman), Hans-Georg Appel, Prof. Dr. Henning Kagermann, Dr. Hans-Jürgen Schinzler and Wolfgang Stögbauer.

Comprising solely representatives of the shareholders, the **Nomination Committee** suggests suitable candidates to the Supervisory Board for the latter's election proposals to the Annual General Meeting.

Members of the Nomination Committee are Dr. Hans-Jürgen Schinzler (Chairman), Prof. Dr. Henning Kagermann and Dr. Bernd Pischetsrieder. Up to the end of 2009 Annual General Meeting, the members of the committee were as follows: Dr. Hans-Jürgen Schinzler (Chairman), Dr. Bernd Pischetsrieder and Dr. Albrecht Schmidt.

The **Conference Committee** makes personnel proposals to the Supervisory Board if the requisite two-thirds majority is not achieved in the first vote when it comes to appointing or dismissing members of the Board of Management. Its responsibilities remain the same after application of the co-determination agreement and are now laid down in the Articles of Association and the Supervisory Board's rules of procedure.

Members of the Conference Committee are Dr. Hans-Jürgen Schinzler (Chairman), Herbert Bach, Hans Peter Claußen and Dr. Bernd Pischetsrieder. Up to the end of 2009 Annual General Meeting, the members of the committee were as follows: Dr. Hans-Jürgen Schinzler (Chairman), Herbert Bach, Dr. Bernd Pischetsrieder and Judy Vö.

More details of the work of the Supervisory Board committees in the financial year ended can be found in the report of the Supervisory Board to the Annual General Meeting, which is printed on page 2 ff.

Annual General Meeting

The regular responsibilities of the Annual General Meeting include reaching a resolution on the appropriation of profits and approving the actions of the Board of Management and Supervisory Board.

At the Company's Annual General Meeting, the principle of "one share, one vote" applies. Shareholders may exercise their voting rights personally or authorise a proxy to cast their votes. Munich Reinsurance Company also offers its shareholders the opportunity to have their voting rights exercised in accordance with their personal instructions by one of the proxies nominated by the Company. At the Annual General Meeting in 2009, an amendment to the Articles of Association was adopted allowing for electronic participation in the Annual General Meeting and postal voting. The details of the procedure are to be determined by the Board of Management and notified when the Annual General Meeting is announced. A precondition for taking part in the Annual General Meeting is that shareholder have given notice of their intention to participate by the deadline specified in Article 6 of the Articles of Association and are entered in the register of shareholders. Insofar as shareholders are entered under their own name as being the holders of shares which belong to a third party and exceed the upper limit of 2% of the share capital as stated in the Articles of Association, the shares entered do not carry any voting rights. The aim of this provision is greater transparency of the share register. Besides this, it is intended to facilitate direct contact with the real shareholders, especially in connection with the convening of the Annual General Meeting and the exercising of voting rights. This regulation applies as from 1 January 2010, also for existing entries.

Corporate governance topics in 2009

The central corporate governance topic in the financial year 2009 was the adjustment of the remuneration system for the Board of Management as from 1 January 2010 to provide even greater incentives for sustainable, long-term-oriented corporate policy.

More details can be obtained from the remuneration report on page 56 ff.

In the past year, the Supervisory Board again performed an efficiency audit. Both the content and the scope of reports from the Board of Management to the Supervisory Board and the work of the Supervisory Board and its committees were assessed as consistently positive and efficient.

Remuneration report

Structure of the remuneration system for the Board of Management In conformity with the German Corporate Governance Code, we here explain the principles of the remuneration system for Munich Re's Board of Management and the structuring of the individual remuneration components.

In accordance with the provision governing remuneration for 2009 under item 4 of the German Corporate Governance Code, the remuneration system for the Board of Management, along with the key elements of relevant contracts, has been determined by the full Supervisory Board. The necessary preparations for the resolution were made by the Personnel Committee of the Supervisory Board, comprising the Chairman of the Supervisory Board, one shareholder representative and one employee representative.

Structure and system of the Board of Management's remuneration					
Component	Share	Assessment basis/ parameters	Corridor	Precondition for payment	Payment
Basic remuneration, remuneration in kind/ fringe benefits (company car, healthcare, security measures, insurance)	25%	Function Responsibility Length of service on Board	Fixed	Contractual stipulations	Monthly
Annual bonus	35%	Consolidated result Company result Divisional result Individual objectives	0-150% (fully achieved= 100%)	Achievement of objectives	Annually in following year
Mid-Term Incentive Plan (performance share plan; term: three years)	20%	Value-based performance targets (three-year average) Total shareholder return (TSR)	0-150% (fully achieved= 100%)	Achievement of three-year targets	In the fourth year
Long-Term Incentive Plan (stock appreciation rights; term: seven years)	20%	Appreciation in share price	0-150% (cap at 150% of share price increase)	> End of vesting period (two years) > 20% share price increase > Munich Re shares have outperformed EURO STOXX 50 twice at the end of three-month period during the term of the plan	As from third year of plan until end of plan
Retirement plan				> Retirement > Insured event	
a) Defined benefits plan (Board members appointed before 2009 who had reached the age of 55 in 2008)	-	Basic remuneration, number of years on the Board	Fixed	> Premature termination or non-extension of employment contract under certain circum- stances	-
b) Defined contribution plan (Board members appointed before 2009 who had not reached the age of 55 in 2008 and Board members appointed with effect from 2009)	-	Basic remuneration	Pension contribution		-

Fixed components

Basic remuneration

The fixed annual basic remuneration is paid in the form of a monthly salary.

Remuneration in kind/fringe benefits

Remuneration in kind and fringe benefits are granted according to function, and are commensurate with market conditions (DAX 30 companies). Income tax on the benefits in question is paid individually for each member of the Board of Management, with the Company bearing the amount due.

Variable components The variable components comprise the annual bonus and the share-price-based remuneration components “Mid-Term Incentive Plan” and “Long-Term Incentive Plan”.

Annual bonus

This compensation component is based on different categories of objectives. The targets and scaling for Group, Company and divisional objectives are geared to particular indicators; individual objectives form the basis for the achievement of personal targets. The key indicator used for the Group objective is RORAC (return on risk-adjusted capital), which comprises key figures from external accounting and from other important portfolio and performance data. Information on the definition of RORAC is provided on page 16. We use the performance measures embodied in value-based management for the Company objective and the divisional objectives.

The processes laid down for specifying objectives and assessing their achievement also involve the external auditor, who subjects the envisaged financial objectives to a predefined review procedure regarding their consistency and assessability, which includes analysing the calculation of the individual results achieved. The outcome of this review and any potentially controversial aspects are rendered transparent for the Supervisory Board’s Personnel Committee.

Mid-Term Incentive Plan

The Mid-Term Incentive Plan 2009–2011 is based on performance over a three-year period. It promotes the medium- and long-term increase in Munich Re’s value in terms of value added (value-based success factors) and improvement in the Munich Re share’s total shareholder return (TSR). The plan provides for the granting of performance share units, free of charge, to members of the Board of Management. Plan participants have the opportunity to share in the development of Munich Re’s value if they achieve their performance targets and increase the TSR.

For the value-based performance objectives, three-year average targets are set for each of the business fields reinsurance, Munich Health and primary insurance. Achievement of objectives is measured at the end of the plan’s term, there being no adjustment of the targets during the course of the plan.

The TSR represents the total return on shares, comprising both the rise in the share price and the dividends paid over a period of three years. Further information on the Mid-Term Incentive Plan can be found on pages 118 to 119 in the notes to the financial statements.

Long-Term Incentive Plan

This remuneration component, with a long-term perspective, is linked to the sustained appreciation of Munich Re’s share price. The Long-Term Incentive Plan, launched every year since 1999, was set up for the members of the Board of Management for the last time in 2009. The participants were granted a certain number of stock appreciation rights. These can only be exercised if, after a two-year vesting period, Munich Re’s share price has risen by at least 20% since inception of the plan and the shares have outperformed the EURO STOXX 50 at least twice over a three-month period during the term of the plan.

Whether the stock appreciation rights can be exercised and, if so, when, is not certain. The exercising and proceeds depend on the development of the share price and fulfilment of the exercise conditions. The amount of income is limited. Up to now, it has only been possible to exercise stock appreciation rights under the plans set up in 1999 and 2003 to 2005. Further information on the Long-Term Incentive Plan can be found on pages 116–117 in the notes to the financial statements.

Weighting of the remuneration components In the case of 100% achievement of objectives (annual bonus) and based on the imputed value of the share-price-linked compensation (Mid-Term Incentive Plan and Long-Term Incentive Plan) at the granting date, the weightings of the individual components in terms of total remuneration for 2009 were as follows: basic remuneration approximately 25%, annual bonus approximately 35%, Mid-Term Incentive Plan around 20%, and Long-Term Incentive Plan around 20%. Annual bonus, Mid-Term Incentive Plan and Long-Term Incentive Plan together formed a well-balanced and economic, i.e. strongly risk-based, incentive system, designed to ensure that the targets set for the members of the Board of Management do not have undesirable effects. No guaranteed variable salary components are granted.

All in all, the remuneration system for the Board of Management was in conformity with the recommendations of the German Corporate Governance Code for 2009.

Up until 2009, the level of total remuneration was set and regularly reviewed by the Supervisory Board's Personnel Committee, also taking into consideration data from peer-group companies. Criteria for the appropriateness of compensation were in particular the respective Board member's duties, the Board member's personal performance, the performance of the Board as a whole, and the financial situation, performance and future prospects of Munich Re. New Board members are generally placed at a level which allows sufficient potential for development in the first three years.

Continued payment of remuneration in the case of incapacity to work In the case of temporary incapacity to work due to illness or for other cause beyond the Board member's control, the remuneration is paid until the end of the contract of employment. The Company may terminate the contract prematurely if the Board member is incapacitated for a period of longer than 12 months and it is probable that he will be permanently unable to fully perform the duties conferred on him (permanent incapacity to work). In this event, the Board member will receive a disability pension.

Other remuneration In the case of seats held on other boards, remuneration for board memberships must be paid over to the Company or is deducted in the course of regular compensation computation. Exempted from this is remuneration for memberships explicitly recognised by the Company as private.

The members of the Board of Management have no contractual entitlement to severance payments. If the Board member's activities on the Board are terminated prematurely without good cause within the meaning of Section 626 of the German Civil Code, payments due may not surpass the equivalent of two years' total remuneration (three years' remuneration in the event of acquisition of a controlling interest or change of control within the meaning of Section 29 para. 2 of the German Securities Acquisition and Takeover Act) and may not cover more than the remaining period of the employment contract. The calculation is to be based on the overall remuneration for the past financial year and, if necessary, on the probable overall remuneration for the current financial year.

In the event of a change of control, only the conditions of the Long-Term Incentive Plan provide for special exercise options. Details of this are available in the notes to the financial statements on page 117 ff.

Pensions Up to and including 2008, the members of the Board of Management were members of a defined benefit plan, providing for payment of a fixed pension amount depending on their basic remuneration and years of service on the Board. The pension level started at 30% and could reach a maximum of 60% of annual basic remuneration.

Beginning in 2009, pension plans for Board members were changed to a defined contribution system. The main aim of this change was the fullest possible outsourcing of all pension-specific risks from the Company's balance sheet. This major risk transfer was achieved by financing increases in entitlements exclusively by paying premiums into insurance policies concluded to cover these benefit obligations. This means the Company is no longer liable for the pension benefits, as these are covered by the aforementioned insurance policies. The longevity risk, the biometric risks of premature occurrence of a pensionable event (e.g. disability or death of a member of the Board during active service), and the capital market risk were thus transferred to the insurer and the individual Board members.

As of 2009, newly appointed members of the Board thus become members of a defined contribution plan. For this plan, the Company provides the Board members with a pension contribution geared to their basic remuneration for each calendar year (contribution year) during the term of their contract. The pension contribution is paid over to an external pension insurer. The insurance benefits which will result from the contribution payments to the external insurer constitute the Company's pension commitment to the Board member. For Board members newly appointed as from 1 January 2009, a uniform pension contribution rate has been set; the annual basic remuneration is multiplied by this rate to arrive at the pension contribution payable.

Board members who had not reached the age of 55 by the end of 2008 maintain as a vested pension their pension entitlement under the previous defined benefit plan (fixed amount in euros) existing at the point of transition on 31 December. As of 1 January 2009, these Board members receive an incremental pension benefit generally based on the defined contribution plan for new Board members. Since the conversion of the pension system took place while Board members' contracts were in force, the pension contributions were calculated in such a way that the total of vested pension, pension-fund pension and incremental pension benefit results in an expected pension at age 60 equivalent to that of the previous pension benefit based on realistic estimates.

Board members who had already reached the age of 55 at the conversion date were not transferred to a defined contribution system and remain members of the previous system's defined benefit plan.

Benefits on termination of employment
Occupational pension

Board members are entitled to an occupational pension on retiring from active service with the Company after reaching the age of 60 or, at the latest, 65.

Benefit amount:

- // For a period of six months, previous monthly basic remuneration (only for Board members appointed prior to 2006)
- // Under the defined contribution plan for new members as from 2009: Annuity based on the policy reserve built up under the external insurance or payment of the policy reserve as a lump sum
- // For Board members transferred from the old system to the new: Vested pension from the defined benefit plan up to 2008 and annuity or lump sum from the policy reserve under the defined contribution plan
- // In the case of defined benefit plans: Defined benefit of between 30% and 60% of annual basic remuneration

Disability pension

Board members are entitled to a disability pension if, due to permanent incapacity to work, their contract ends by mutual agreement, is terminated by the Company, or their appointment is not extended or revoked. Permanent incapacity to work means if the Board Member is incapacitated for a period of longer than 12 months and it is probable that he will be permanently unable to fully perform the duties conferred on him.

Benefit amount:

- // For a period of six months, previous monthly basic remuneration (only for Board members appointed prior to 2006)
- // Under the defined contribution plan for new members as from 2009: 80% of the insured occupational pension up to the age of 59, with subsequent occupational pension
- // For Board members transferred from the old system to the new: Vested pension from defined benefit plan up to 2008 and 80% of the insured occupational pension benefit up to age 59 with subsequent occupational pension based on the defined contribution plan
- // In the case of defined benefit plans: Defined benefit of between 30% and 60% of annual basic remuneration

Reduced occupational pension on early retirement

Board members are entitled to an occupational pension if the contract of employment is terminated as a result of non-extension or revocation of the Board member's appointment without the Board member having given cause for this through a gross violation of his duties or at his own request; the precondition is that the Board member has already passed the age of 50, has been in the employment of the Company for more than ten years when the contract terminates, and has had his appointment to the Board of Management extended at least once.

Benefit amount:

- // For a period of six months, previous monthly basic remuneration (only for Board members appointed prior to 2006)
- // Under the defined contribution plan for new members as from 2009: Annuity based on the policy reserve built up under the external insurance or payment of the policy reserve as a lump sum at the date the pension benefit is claimed
- // For Board members transferred from the old system to the new: Entitlement of between 30% and 60% of annual basic remuneration, reduced by 2% for each year or part thereof short of the Board member's 65th birthday; the Company assumes payment of the difference between the monthly occupational pension and the monthly incremental pension from the external insurance. The policy reserve available at the date the pension benefit is claimed can be paid out as an annuity or as a lump sum
- // In the case of defined benefit plans: Defined benefit of between 30% and 60% of the annual basic remuneration, reduced by 2% for each year or part thereof short of the Board member's 65th birthday

Vested benefits for occupational pension, disability pension and surviving dependants

Vested benefits are paid upon the Board member reaching the age of 60, in the case of incapacity to work, or in the event of the Board member's death

a) Vested benefits under the German Employers' Retirement Benefits Act

Board members have vested benefits under the German Employers' Retirement Benefits Act if they leave the Company before reaching the age of 60 and the pension commitment has existed for at least five years before.

Benefit amount:

- // Under the defined contribution plan for new members as from 2009: Annuity based on the policy reserve built up under the external insurance or payment of the policy reserve as a lump sum at the date the insured event occurs
- // For members of the Board of Management transferred from the old system to the new The entitlement under the vested pension is a proportion of the vested pension based on the ratio of actual service with the Company to the period the Board member would have worked for the Company altogether up to the fixed retirement age (Section 2 para. 1 of the German Employers' Retirement Benefits Act). The entitlement from the incremental pension comprises the pension benefits fully financed under the insurance contract up to the occurrence of the insured event based on the pension contributions made up to the date of leaving the Company (Section 2 para. 5a of the German Employers' Retirement Benefits Act). This entitlement is paid out as an annuity or a lump sum
- // In the case of defined benefit plans: The defined benefit is between 30% and 60% of the annual remuneration. The vested benefits are a proportion of the occupational pension, based on the ratio of actual service with the Company to the period the Board member would have worked for the Company altogether until his 60th birthday (Section 2 para. 1 of the German Employers' Retirement Benefits Act)

b) Improved vested benefits

Improved vested benefits are granted if the contract ends owing to non-extension of the Board member's appointment (by the Company) but not due to gross violation of duties or to the Board member giving notice. A further precondition is that the Board member leaves the Board before reaching the age of 60 and has at least ten years' service with the Company.

The improved vested benefits do not apply to Board members appointed as from 2009. For Board members transferred from the old system to the new, the improved vested benefits apply only to that part of their pension resulting from the vested pension under the defined benefit plan.

Benefit amount:

- // For a period six months after leaving the Board, previous monthly basic remuneration (only for Board members appointed prior to 2006)
- // For the share of the defined benefit plan: Defined benefit of between 30% and 60% of the annual basic remuneration, reduced by 2% for each year or part thereof short of the Board member's 60th birthday

Provision for surviving dependants

In the event of the death of a Board member during active service, the surviving dependants (widow/widower, orphans) receive the previous monthly basic remuneration for a period of six months if the deceased was appointed to the Board of Management before 2006. In the case of Board members appointed as from 2006, the previous monthly basic remuneration is paid to the beneficiaries for a period of three months.

If the Board member dies after retirement, the surviving dependants receive the previous monthly occupational pension for a period of three months, provided the marriage took place and/or the child was born before the Board member started drawing the occupational pension. If the Board member's occupational pension was reduced owing to early retirement, widow(er)'s and orphan's pensions are based on the reduced occupational pension.

Surviving dependants of a Board member who dies during active service or after retirement, subsequently receive the following benefits:

Benefit amount:

- // Widow(er)'s pension amounting to 60% of the defined benefit or insured occupational pension
- // Orphan's pension amounting to 20% of the defined benefit or insured occupational pension per orphan
- // Doubling of the orphan's pension if no widow(er)'s pension is payable
- // Widow(er)'s and orphan's pensions together may not exceed the occupational pension

The entitlement to provision for surviving dependants ceases if the widow(er) of a Board member appointed as from 2006 remarries. The entitlement for orphans ceases on their reaching the age of 20. For orphans who are in full-time education or vocational training, doing military or civilian service, or unable to support themselves owing to a physical or mental disability, the entitlement is extended until they reach the age of 27.

In the case of Board members appointed before 2009, occupational pensions and pensions for surviving dependants are reviewed for adjustment if salaries payable under pay-scale agreements in the insurance industry have increased by more than 12% (based on the average final salary of all pay-scale categories) since the pensions were last fixed or more than three years have passed since that date. The adjustment made will at least be in line with the increase in the cost of living in the meantime according to the consumer price index for Germany. This arrangement also applies to Board members newly appointed as from 2009 who received a pension commitment from the Company for the first time before 1 January 1999. For Board members appointed as from 2009 who did not receive a pension commitment from the Company before 1 January 1999, occupational pension and benefits for surviving dependants are adjusted by 1% annually from the date when the pension or benefit starts being drawn, in accordance with Section 16 para. 3 item 1 of the German Employers' Retirement Benefits Act. Vested benefits are not adjusted.

Total remuneration of the Board of Management The basis for reporting the remuneration of Board members is German Accounting Standard No. 17 (DRS 17), according to which the amount shown for the annual bonus is the provision established for that bonus, since the performance on which the bonus is based has been completed by the balance sheet date and the requisite Board resolution is already foreseeable. The members of Munich Reinsurance Company's Board of Management received remuneration totalling €17.8m (18.2m) for fulfilment of their duties in respect of the parent company and its subsidiaries in the financial year. The previous year's figures have been adjusted in accordance with DRS 17.

Remuneration of individual Board members as per DRS 17

(in accordance with Section 285 sentence 1 item 9a sentences 5-9 of the German Commercial Code and Section 314 para. 1 item 6a sentences 5-9 of the German Commercial Code)

¹ At the balance sheet date, no Board resolution had yet been passed on the amounts to be paid for 2009. The amount shown for the annual bonus is based on estimates and the corresponding provisions posted. For the 2008 annual bonus, a total of €295,722 more was paid out than had been reserved. The provisions for the 2009 annual bonus have been increased by this amount.

² Performance share units were granted for the first time for the financial year under the Mid-Term Incentive Plan 2009-2011.

For 2008: Amount paid out for the medium-term bonus 2006-2008. Compared with the amounts shown in the previous year, there is a difference of -€253,800 resulting from the deviation between the provisions of €7,860,000 posted and the actual amount of €7,606,200 paid out.

³ The total expenditure recognised in the reporting period (expenses for reserves due to the development in value of the performance share units from the 2009-2011 plan, including the value recognised in 2009) for the Mid-Term Incentive Plan 2009-2011 breaks down as follows: von Bomhard €835,967, Arnoldussen €340,465, Blunck €368,024, Daschner €404,195, Jeworrek €510,793, Röder €297,979, Schneider €596,981, Strassl €199,609, Wenning €255,301.

⁴ The total expenditure recognised in the reporting period (expenses for/release of reserves due to the development in value of the stock appreciation rights from the 2002-2009 plans, including the value recognised in 2009) for the long-term incentive plans breaks down as follows: von Bomhard -€2,331,300.53, Arnoldussen -€346,713.03, Blunck -€675,247.58, Daschner -€1,099,742.78, Jeworrek -€1,252,168.39, Röder -€235,286.78, Schneider -€1,697,668.50, Strassl -€736,714.54, Wenning €303,538.79.

⁵ Remuneration in kind/fringe benefits including anniversary payment.

⁶ Member of the Board of Management since 1 January 2009.

⁷ Remuneration in kind/fringe benefits including one-off expenses on appointment to the Board of Management (e.g. maintaining two households, move).

The Mid-Term Incentive Plan 2009-2011 and the long-term incentive plans are accounted for at fair value at the granting date. Information on fair values is provided in the notes to the consolidated financial statements on pages 117 and 119. Whether the variable component amounts will actually be paid out to the Board members and, if so, how high the sums will be, is not yet certain and will depend on the degree to which individual objectives are achieved, on share-price development and on the fulfilment of the exercise conditions of the long-term incentive plans. Munich Re shares have been acquired to cover future obligations arising from the long-term incentive plans as from 2003, so that the expenses resulting from a growth in value of the stock appreciation rights are neutralised by an increase in the value of the share portfolio.

Remuneration of the individual Board members after allocation of component amounts to the financial years for which they were actually payable

Name	Financial year	Basic remuneration	Remuneration in kind/fringe benefits	Annual bonus ¹	Value of performance share units granted ^{2, 3}	Value of stock appreciation rights granted ⁴	Total	Number of performance share units	Number of stock appreciation rights

¹ At the balance sheet date, no Board resolution had yet been passed on the amounts to be paid for 2009. The amount shown for the annual bonus is based on estimates and the corresponding provisions posted. For 2008, the annual bonus actually paid is shown; it is €295,722 more than the provisions shown in the previous year (total provisions for 2008 = €2,546,789; actual amount paid = €2,842,511).

² Performance share units were granted for the first time for the financial year under the Mid-Term Incentive Plan 2009-2011. The figure 0 shown for 2008 refers to the medium-term bonus 2006-2008, for which the achievement of objectives was 0% for the previous year.

³ The total expenditure recognised in the reporting period (expenses for reserves due to the development in value of the performance share units from the 2009-2011 plan, including the value shown in 2009) for the Mid-Term Incentive Plan 2009-2011 breaks down as follows: von Bomhard €835,967, Arnoldussen €340,465, Blunck €368,024, Daschner €404,195, Jeworrek €510,793, Röder €297,979, Schneider €596,981, Strassl €199,609, Wenning €255,301.

⁴ The total expenditure recognised in the reporting period (expenses for/release of reserves due to the development in value of the stock appreciation rights from the 2002-2009 plans, including the value recognised in 2009) for the long-term incentive plans breaks down as follows: von Bomhard -€2,331,300.53, Arnoldussen -€346,713.03, Blunck -€675,247.58, Daschner -€1,099,742.78, Jeworrek -€1,252,168.39, Röder -€235,286.78, Schneider -€1,697,668.50, Strassl -€736,714.54, Wenning €303,538.79.

⁵ Remuneration in kind/fringe benefits including anniversary payment.

⁶ Member of the Board of Management since 1 January 2009.

⁷ Remuneration in kind/fringe benefits including one-off expenses on appointment to the Board of Management (e.g. maintaining two households, move).

The presentation of remuneration after allocation to appropriate periods shows the economic apportionment of the amounts between the individual financial years, which is particularly relevant for the medium-term bonus 2006-2008. In this view, the total remuneration shows an increase of €6.5m compared with the previous year. The main reason for this is that, based on the results, the achievement of objectives for the medium-term bonus 2006-2008 was 0% for 2008. After allocation to appropriate periods, total remuneration for the year under review amounts to €17.5m (11.0m).

Pension entitlements Personnel expenses of €3.4m (-0.2m) were incurred in the financial year 2009 to finance the pension entitlements for active members of the Board of Management. Of these, €0.7m was apportionable to defined benefit plans and €2.8m to defined contribution plans. As a consequence of the risk transfer to an external insurer under the defined contribution system, there will be a clearly noticeable and lasting increase in the visible pension costs as of 2009. The Company accepts this increase in order to avoid higher costs in future and to eliminate long-term pension-specific risks. The following pension commitments result for the individual members of the Board of Management:

Pension entitlements

¹ Value of vested pension at 31 December 2008.

² Expenses for defined benefit plan, including provision for continued payment of salary for surviving dependants.

³ No transfer to defined contribution system, as Board member had already reached 55 at the conversion date.

⁴ Member of the Board of Management since 1 January 2009.

Outlook

Structure of the remuneration system for the Board of Management as from 1 January 2010

The remuneration system for the Board of Management has been revised with effect from 1 January 2010 on the basis of the remuneration-related amendments to the German Act on the Appropriateness of Management Board Remuneration and the German Corporate Governance Code. Particular attention has been paid in this regard to comprehensibility and transparency.

The following new remuneration system for the Board of Management has been decided by the full Supervisory Board on the basis of a proposal by the Personnel Committee of the Supervisory Board.

Structure of the remuneration system for the Board of Management					
Component	Share ¹	Assessment basis/parameters	Corridor	Precondition for payment	Payment
Basic remuneration plus remuneration in kind/ fringe benefits (company car, healthcare, security measures, insurance)	30%	Function Responsibility Length of service on Board	Fixed	Contractual stipulations	Monthly
Variable remuneration	70%	Corporate performance Personal performance			
30% annual performance (for 100% achievement of objectives)		Group objective Company objective Divisional objectives Individual objectives	0-200% (fully achieved = 100%)	Achievement of annual objectives	In the second year, on condition that 50% of the net payout amount is invested by the Board member in Munich Re shares that must be held for at least a four-year period
70% multi-year performance (for 100% achievement of objectives)		Objectives for the business fields - reinsurance - Munich Health - primary insurance Individual objectives	0-200% (fully achieved = 100%)	Achievement of three-year objectives	In the fourth year, on condition that 25% of the net payout amount is invested by the Board member in shares that must be held for at least a two-year period
Pension				> Retirement > Insured event > Premature termination or non-extension of employment contract under certain circumstances	
a) Defined benefits plan (Board members appointed before 2009 who had reached the age of 55 in 2008)	-	Pensionable basic remuneration (= 25% of target overall direct remuneration), number of years on the Board	Fixed		-
b) Defined contribution plan (Board members appointed before 2009 who had not reached the age of 55 in 2008 and Board members appointed since 2009)	-	Target overall direct remuneration	Pension contribution		-

¹ For the variable remuneration, the share shown presupposes 100% achievement of the objectives.

The new structure comprises only two remuneration components: basic and variable remuneration. The variable remuneration component contains both annual and three-year objectives, thus replacing the annual bonus and Mid-Term Incentive Plan. The Long-Term Incentive Plan has been done away with. The share-price-based component has been retained in the form of the Board members' obligation to invest in Munich Re shares that they must hold for at least a four- or two-year period. Overall, the new remuneration system focuses more strongly than before on long-term targets and thus creates an even greater incentive for sustainable corporate development.

Variable remuneration

The variable remuneration component is geared to the overall performance of the Group and of defined organisational units and to the personal performance of the individual members of the Board of Management. It is measured on the basis of annual and multi-year performance, for which new objectives will be set every year. Payouts are made at the end of the one- and three-year periods under consideration. With a view to sustainability, the members of the Board of Management will be obliged to invest part of the variable remuneration paid out in Munich Reinsurance Company shares.

Annual performance

Annual performance targets for the variable remuneration component are set on the basis of divisional and individual objectives as well as the Company and the Group objective. 30% of the target amount for variable remuneration can be earned in the event of full achievement (= 100%) of the objectives. The targets and scaling for Group, Company and divisional objectives are geared to particular indicators; individual objectives form the basis for the achievement of personal targets. The key indicator used for the Group objective is RORAC (return on risk-adjusted capital), which comprises key figures from external accounting and from other important portfolio and performance data. Information on the definition of RORAC is provided on page 16. The performance measures embodied in value-based management are used for the Company objective and the divisional objectives. The objectives are weighted individually according to the responsibilities of the individual members of the Board of Management.

The variable remuneration for annual performance is reviewed and decided on by the full Supervisory Board and then calculated and paid out in the year after the one-year period under consideration. Payment is effected on condition that 50% of the net payout amount is invested in Munich Reinsurance Company shares that the Board member must hold for at least a four-year period.

Multi-year performance

Three-year targets based on the performance of the reinsurance, Munich Health and primary insurance segments and on individual objectives are fixed every year for the multi-year performance remuneration component. 70% of the target amount for variable remuneration can be earned in the event of full achievement (= 100%) of the objectives. The targets and scaling for the business field targets are geared to VBM performance indicators, and the individual targets are based on individual objectives. The objectives are weighted individually according to the responsibilities of the individual members of the Board of Management.

The variable remuneration for multi-year performance is reviewed and decided on by the full Supervisory Board and then calculated and paid out in the year after the three-year period under consideration. Payment is effected on condition that 25% of the net payout amount is invested in Munich Reinsurance Company shares that the Board member must hold for at least a two-year period.

Pensions

Owing to the increase from 25% to 30% in the share of basic remuneration in overall remuneration, there has been a change in the assessment basis for the Board members' pensions. An unintended rise in the pension would otherwise have been the consequence. From 1 January 2010 onwards, the defined benefits are fixed on the basis of "pensionable basic remuneration", which corresponds to 25% of the target overall direct remuneration (= basic remuneration + variable remuneration on the basis of 100% achievement of objectives). In the case of the defined contribution plan, the rate is fixed on the basis of the target overall direct remuneration.

Further development of the remuneration system

In its Circular 23/2009 of 21 December 2009, the German Federal Financial Supervisory Authority (BaFin) specified in more detail for the German insurance industry the Financial Stability Board principles whose implementation the G20 states agreed on at their summit meeting in Pittsburg in September 2009. In January 2010, Munich Re set up a Remuneration Committee as required by the BaFin circular. In 2010, the Remuneration Committee will deal with the implementation of the principles in the Group with effect from 1 January 2011.

An initial provisional examination has shown that the remuneration system for the Board of Management as decided on with effect from 1 January 2010 is in compliance with the requirements of the BaFin circular.

Remuneration structure for senior executives, including security-based incentive systems In compliance with BaFin's Circular 23/2009, the following paragraphs provide details of the remuneration structures for our senior executives in Munich.

The **fixed components** for senior executives comprise a fixed annual basic remuneration, paid out as a monthly salary, plus customary market fringe benefits and remuneration in kind (e.g. company car, insurance).

The **variable components** are made up of the short-term components "performance-related bonus" and "Company result bonus", and the share-price-linked components Mid-Term Incentive Plan and Long-Term Incentive Plan.

The **performance-related bonus** is based on quantitative and qualitative objectives. We use indicators from strategic planning for the quantitative objectives, while personal objectives are agreed on for the qualitative portion.

The key indicator used for the **Company result bonus** is RORAC (return on risk-adjusted capital), which comprises key figures from external accounting and from other important portfolio and performance data. The targets correspond to the Group objective for the annual bonus for members of the Board of Management. Information on the definition of RORAC is provided on page 16. The Company result bonus basically takes the form of a "bonus pool" model. Depending on corporate performance, an available aggregate amount is calculated that can be distributed between all staff as a bonus. The higher the management level, the higher the target range under the Company result bonus. The way this bonus works ensures that the performance of Munich Re as a whole is systematically reflected in the remuneration of all staff and that the bonus amount bears a reasonable relationship to overall corporate performance.

The **Mid-Term Incentive Plan**, with a duration of three years, and the **Long-Term Incentive Plan**, with a duration of seven years, are based on the corresponding plans for the Board of Management in 2009. Their structure is explained on pages 58-59.

The **weighting** for the variable remuneration components is more than 50% for the first management level below the Board of Management. Proceeding down the management hierarchy, the proportion of variable remuneration decreases successively from one management level to the next, making up around one-third of total remuneration at the lowest management level. Thus, with the same incentivisation logic, the individual variable components are present at all management levels, albeit with different weightings.

There is a well-balanced combination of short-, medium- and long-term components. The proportion of medium- and long-term remuneration is over 50% in the variable remuneration for the top management level, so that a longer-term incentive system is provided for. No guaranteed variable remuneration components are granted.

Total remuneration of the Supervisory Board By resolution of the 2008 Annual General Meeting, the Supervisory Board's remuneration was adjusted and restructured to take account of current circumstances. The rules apply for the first time to the financial year 2009. Fixed remuneration has been marginally increased, whereas the performance-related annual remuneration has been reduced. Each member of the Supervisory Board receives an annual fixed remuneration of €50,000 (previously €45,000) and a variable, performance-related remuneration.

The result-related annual remuneration is based on the undiluted earnings per share from continuing operations, as shown in the consolidated financial statements in accordance with International Financial Reporting Standards (IFRSs): each Supervisory Board member receives €4,000 for each full euro by which earnings per share exceed €12, but a maximum of €40,000. Based on earnings per share of €12.95, no result-related annual remuneration is payable for the financial year 2009.

Furthermore, in accordance with the German Corporate Governance Code, a remuneration component of €10,000 based on long-term corporate performance has been introduced. This will be paid out if earnings per share in the remuneration year exceed earnings per share in the third financial year preceding the remuneration year by at least 30%. No long-term remuneration component is payable for the remuneration year 2009.

The remuneration for the Chairman of the Supervisory Board and the additional amounts payable to members of the Supervisory Board committees have been increased, thus making greater allowance than in the past for the substantial workload involved. The additional amount paid for work on committees now totals 50% of the fixed remuneration (or 100% for the chairman of a committee). The remuneration of the Chairman of the Supervisory Board amounts to 250% of the fixed and variable remuneration, while his deputy continues to receive 150%.

The limitation of the total remuneration of each member of the Supervisory Board to three times the fixed remuneration ensures that the overall remuneration of individual Supervisory Board members remains appropriate even if further committees are set up.

Remuneration of Supervisory Board members in the financial year 2009 in accordance with Article 15 of the Articles of Association¹

¹ Plus turnover tax in each case, in accordance with Article 15 para. 6 of the Articles of Association.

² In the case of members of the Audit Committee and/or Nomination Committee, the amount includes attendance fees in accordance with Article 15 para. 4 of the Articles of Association.

Share trading and shares held by members of the Board of Management and the Supervisory Board

The Company has to be notified promptly of the acquisition or sale of Company shares (or financial instruments based on these) by members of the Board of Management and Supervisory Board and by certain persons closely related to or connected with them. This notification must take place for acquisition and sales transactions totalling €5,000 or more in a single calendar year. Under Section 10 para. 1 of the German Securities Prospectus Act, Munich Reinsurance Company is obliged to publish information of this kind on its website without delay as well as in an annual document.

The total number of Munich Re shares and related financial instruments held by all members of the Board of Management and Supervisory Board amounts to less than 1% of the shares issued by the Company.

Risk report

Risk governance and risk management system

The selective acceptance of reinsurance risks is at the core of our business model. Compliance of our risk early-warning system with the legal requirements is regularly examined independently, both by internal auditing units and by the external auditor as part of the annual audits. Whilst we are in a position to adequately assess risk situations, the growing complexity and dynamism of the environment in which we operate means that there are, naturally, limits. This risk report reflects the German Accounting Standard DRS 5-20.

Risk management organisation, roles and responsibilities

Remit and objectives Risk management is a key part of our corporate management. Its purpose is not only to safeguard the Group's financial strength, enabling us to meet our obligations to clients and create sustained value for our shareholders, but also to protect Munich Re's reputation. We achieve these objectives through global risk management encompassing all areas of our operations. In this process, Munich Reinsurance Company is included in the risk management of the reinsurance segment.

Organisational structure To ensure that its risk management is efficient and effective, Munich Re has established specific risk management functions and bodies. The Integrated Risk Management (IRM) Division supervises risk management Group-wide, building on decentralised structures in all units of the Group. It is headed by the Group Chief Risk Officer (Group CRO), who, like the decentralised CROs at individual companies, is supported by interdisciplinary teams of highly qualified staff. Our extensive documentation, guidelines and instructions ensure that staff in our risk management structure and the Group as a whole are sufficiently informed about our risk strategy, organisation and processes.

Risk governance The Chief Risk Officer is a permanent member of the Group Committee, the Board of Management committee for strategic issues and the body responsible for decisions in matters concerning the whole Group. Risk topics for the Group as a whole are dealt with by the Group Risk Committee, which comprises the members of the Group Committee plus other specialists from insurance and reinsurance. We adopt a similar approach at business-segment level. For reinsurance, a dedicated risk committee – the Global Underwriting and Risk Committee (GURC) – has been formed from within the ranks of the Reinsurance Committee.

New segment Munich Health (MH) from first quarter of 2010

From the first quarter of 2010, the new Munich Health segment (MH) will feature in Munich Re's risk reporting. Since early 2009, all of MH's strategic and risk issues have been addressed by the Munich Health Board. A Munich Health risk committee will also be set up in 2010 to deal with risk issues.

Determining the risk strategy We operate worldwide, turning risk into value. The assumption of risks is therefore an essential part of our business strategy. The risk strategy defines the extent of the risks we have incurred for our clients and shareholders. The development of the risk strategy is embedded in the annual planning cycle, and hence in our business strategy. The risk strategy is approved by the Board of Management and discussed regularly with the Supervisory Board. Our risk strategy takes into account the interests of both clients and shareholders. Its objectives are:

- // to maintain our financial strength, thereby ensuring that our liabilities to our clients can be met,
- // to protect and increase the value of our shareholders' investment,
- // to safeguard Munich Re's reputation.

The risk strategy is determined by setting a risk appetite defined by a series of risk limits. The risk appetite is based on the capital and liquidity available and earnings volatility, and provides a term of reference for the Group's operating divisions. The risk limits are:

- // overall portfolio limits: based on Munich Re's overall risk portfolio and designed to protect our capital and limit the likelihood of an economic loss for the year;
- // supplementary limits: to limit losses that can arise out of individual risk types or accumulations, such as natural hazards, terrorism and pandemics, and to limit market and credit risks that could endanger Munich Re's survival;
- // other limits: designed to preserve Munich Re's reputation and thus protect its future business potential. They encompass limits for individual risks that, though they would not necessarily threaten the Company's existence, could cause lasting damage to the confidence of clients, shareholders and staff.

The risk appetite laid down ensures that an appropriate balance is maintained between business opportunities and risks incurred. The terms of reference set out in the risk strategy have especially proved their worth in the financial crisis.

Implementation of strategy and the risk management cycle The risk appetite defined by the Board of Management is reflected in our business planning and integrated into the management of our operations. In the event of capacity shortages or conflicts with the systems of limits and rules, there are fixed escalation and decision-making processes which ensure that business interests and risk management aspects are reconciled. If necessary, risks are ceded or hedged by means of reinsurance, derivatives or other forms of risk relief.

Our **implementation of risk management at operational level** embraces the identification, measurement, analysis and assessment of risks, and the resultant risk reporting, limitation (reduction to a level we have defined as appropriate) and monitoring. With these processes, we endeavour to consider all risks.

Risk identification is performed by means of appropriate systems and indicators (quantitative component) and a number of risk surveys, which are supplemented by expert opinions and assessments by selected managers (qualitative component). Our ad-hoc reporting process provides for staff to report risks to central risk management (IRM) at any time.

Constant refinement of our risk measurement tools

Risk measurement We are constantly refining the tools we use to measure risks. Our suite of tools is tailored to the business or operational segment we are monitoring. This enables us to properly assess the risks of Munich Reinsurance Company as a part of the reinsurance segment. In each case, the lead risk measure is an economic risk measure designed to best reflect the risk in our portfolio.

We regularly compare the results of our risk model with both regulatory and rating-agency measures. These comparisons are made at a number of levels, including segment and risk type. We also regularly perform outside-in benchmarking of our capital-model results and participate in industry surveys to constantly challenge and continuously refine our risk measurement tools. We compare our model with the current status of Solvency II and take part in the Quantitative Impact Studies.

Risk analysis and evaluation, taking into account limitations of capital fungibility, are carried out at the top-most level in IRM, in the form of a consolidated Group view. They are based on the analyses prepared in the central risk management units of the Munich Re reinsurance group. Besides this, IRM is responsible for checking and validating the analyses of downstream units. To this end, IRM collaborates closely with many units and experts within the Group and in some cases with outside parties. This provides us with a quantitative and qualitative assessment that considers possible interdependencies between risks.

Risk limitation is derived from the risk strategy. Based on the defined risk appetite, limits and budgets and any risk-reducing measures required are decided on and implemented. Various units in the Group work hand in hand to comply with the specified risk criteria, whilst simultaneously taking account of business interests. If a business unit identifies attractive business that exceeds its risk limits, the competent risk management departments and IRM analyse the potential impact of the business on the Group portfolio and the risk appetite of the Group as a whole. Taking these results and the expected earnings from the business into consideration, we devise a solution that enables the business to be accepted in our books if appropriate.

Quantitative **risk monitoring** based on indicators is carried out at central points, e.g. at MEAG for investments. We monitor qualitative risks on a decentralised or centralised basis, depending on their significance and classification.

Control and monitoring systems

Uniform worldwide system for managing risks

In 2009, we continued with the Group-wide project launched in 2008 to enhance our internal risk-control system (ICS) aimed at harmonising and coordinating more closely the various control and monitoring systems in place in the Group. The ICS being introduced at Munich Re is a uniform worldwide system for managing risks across all risk dimensions that both meets Group management needs and satisfies local legal and regulatory requirements. The Board of Management has responsibility for the ICS and it falls structurally under the responsibility of the CRO. Munich Re's organisational structure ensures the separation required by MaRisk between functions that are not reconcilable, up to and including Board level.

Using a holistic risk management approach, risks and the related controls across all risk dimensions and areas of the Group were identified, analysed and assessed and improvements and control procedures defined. We focused on significant risks, key processes and controls, and important units in our international organisation.

By systematically linking risks and processes and determining the relevant risk control points, we were able to clearly identify even cross-divisional risks and controls. Staff from our specialist departments were involved throughout and were thus able to feed their knowledge and experience directly into the ICS. Their involvement also enabled us to make the need for risk controls and risk management clearer. In this way, we have been able to build a stronger foundation for a uniform understanding of risk and improve our awareness of risk and the need for controls. The ICS will in future be reviewed by Internal Audit as part of its audit plan at least annually to evaluate its effectiveness and assess the need to adapt it to take account of changes in parameters.

The ICS is being implemented in stages and will be fully operational in 2012.

Besides risks in our operational units, the ICS and risk management also covers risks in the compliance and accounting areas. The risks in our operational units comprise investment risks, underwriting risks and operational risks.

Appropriate internal controls for
accounting risks

We use the ICS to ensure that appropriate internal controls are set up and maintained for accounting risks, enabling us to guarantee that financial reporting is reliable and, in particular, our published financial statements are correct.

Underwriting transactions and general business are in principle accounted for locally, i.e. in Munich and at our offices abroad, while accounting for investments is carried out centrally by our service provider MEAG. The centralisation and introduction of global sub-ledgers is not yet fully complete and is currently being implemented.

Munich Re applies carefully defined materiality thresholds to ensure that internal controls are appropriate. Significance, risk experience and compliance are taken into account in determining the thresholds. All risks significant from the Company's perspective for financial reporting are integrated into the ICS in accordance with uniform criteria.

By means of an accounting manual and regular circulation of information on changes required, Munich Re ensures that uniform rules are applied throughout the Group for the treatment, valuation and disclosure of all items in the balance sheet and income statement. The process of change in accounting is subject to stringent procedure as regards timing, responsibilities and circulation of information. A standardised "enforcement" process is used to ensure that the accounting regulations are implemented and complied with.

The financial statements are prepared using a fast-close procedure in a central system. Clearly documented instructions and controls are in place for the closing process.

At the branches included in the financial statements, transactions are posted using a globally standard ledger with harmonised basic data, standard processes and posting rules, and standard interfaces to the underwriting and investment sub-ledgers. The rules for access to accounting systems are clearly defined using systems of authorisation.

Dual control is applied throughout the process of producing the financial statements. System and accounting checks are in place at every stage of the closing process. Any errors are analysed, followed up and corrected.

Risk reporting

Internal risk reporting provides management with regular information on the risk situation as regards the individual risk categories (ongoing). This ensures that faint signals and negative trends are identified in sufficient time for countermeasures to be taken. Responsibility for risk reporting lies with IRM, whilst Group Reporting attends to related annual-report requirements deriving from the accounting standards applied.

The aim of our external risk reporting is to provide a clear overview of the Company's risk situation. This includes information on our risk management methods and processes, our risk governance, and the individual risks to which the Company is exposed.

We not only meet current legal requirements with our risk reporting, but also create transparency for management, our clients and our shareholders.

Significant risks

We classify risks as significant if their implications are serious enough to endanger Munich Re's continued existence or reputation. Taking into account the relevant risk tolerance, we have applied this definition consistently to the individual business units. The assessment of whether a risk is significant for a unit within the meaning of this definition is carried out in the risk management unit IRM.

Specifically, we distinguish between the following categories from which significant risks can arise.

Underwriting risk: Property-casualty insurance This is defined as the risk that insured losses in property-casualty business may be higher than our expectations.

Significant risks in property-casualty insurance are the premium and reserve risks. Premium risk is the risk of future claims payments relating to insured losses that have not yet occurred being higher than expected. The reserve risk is the risk of technical provisions being insufficient to cover losses that have already been incurred.

Premium risk Primary responsibility for controlling the premium risk lies with operational management. Managers of operations grant underwriting authorities and lay down internal processes with the intention of ensuring that a high level of quality is maintained; in doing so, they take account of both the specific exposures in their business and the competence of each member of staff.

This operational responsibility is increased or limited by instructions and procedures, which define the activity of each underwriting unit and recognise the particular characteristics of the reinsurance business concerned.

In particularly critical areas, the underwriting authorities granted to the operating units are restricted, minimum standards prescribed to ensure transparency, and quality assurance and risk management processes laid down. For the natural hazard and terrorism scenarios, budget capacities compatible with the risk strategy are allocated to each underwriting unit. Before business is accepted, risk data must be recorded and the potential loss quantified in accordance with mandatory rules, and the business may only be written if sufficient budget capacity is available.

In order to prevent Munich Re's risk appetite for a single risk being exceeded, mandatory procedures ensure that the channels through which we might be involved in a large individual risk are checked before it is written to ascertain the size of our overall participation.

Generally unwanted exposures may only be accepted after submission to the committees responsible.

Due to the diversity and complexity of Munich Re's business, it is not possible to produce a set of rules for acceptance that would fully cover all relevant risks. The training of operational underwriters is therefore of prime importance. This is achieved through organised training, provision of IT systems for risk assessment and pricing, circulation of information papers and underwriting recommendations, and working groups set up to prepare underwriting knowledge for transmission to underwriters.

Reserve risk The estimation of liabilities is fraught with uncertainty. This is due to the fact that the settlement of claims that have arisen before the balance sheet date is dependent on future events and developments. Unforeseen loss trends resulting from court decisions, changes in the law, differences in loss adjustment practice, medical and long-term care, and economic factors such as inflation can have a considerable effect on loss experience.

We calculate the reserves for losses and claims settlement costs in accordance with actuarial practice based on substantiated assumptions, methods and assessments. The assumptions are updated and reviewed from a variety of perspectives, for example by actuaries in our Reserving Department, underwriters, claims staff, the Chief Financial Officer and the Board of Management.

We are convinced that the reserves we have posted comply with accepted actuarial principles and are sufficient for all unpaid claims and actuarial liabilities that Munich Re has to meet on the basis of its contractual conditions and agreements.

The net run-off loss (excluding life business) after adjustment premiums decreased by €152m to €281m compared with the previous year. Significant run-off losses after adjustment premiums resulted in the year under review mainly in liability and credit reinsurance, owing to the aforementioned claims burdens from the financial crisis in the lines of D&O and credit and surety business. Further run-off losses were recorded in accident reinsurance. By contrast, run-off development was positive above all from fire, motor and engineering business, chiefly due to the fact that it was not necessary to strengthen reserves to the same degree as in the previous year. Also, we were able to reduce some reserves because the claims estimates turned out to have been too conservative.

**Consistency through
Group-wide reserving rules**

Application of Group-wide reserving rules guarantees a consistent procedure. In addition, internal audits are carried out Group-wide to provide a continuous check of both compliance with reserving rules and the appropriateness of the reserves.

Besides other key indicators, combined ratios are important for us in monitoring the premium/claims risk in property-casualty reinsurance.

Combined ratios for the last ten years in %	2009	2008	2007	2006	2005 ³	2004	2003	2002 ²	2001 ¹	2000
Including natural catastrophes	98.2	102.4	95.9	97.9	117.0	96.4	93.8	108.3	127.4	115.7
Excluding natural catastrophes ⁴	96.8	97.1	91.5	96.6	97.5	91.2	92.3	105.0	126.2	111.9

¹ Thereof World Trade Center 15.9%.

² Thereof World Trade Center 3.5%.

³ Thereof effect of assuming discounted claims provisions from Munich Re America: 8.7%.

⁴ 2007 and prior years adjusted due to an increase in the threshold for large losses.

Underwriting risk: Life and health insurance The underwriting risk in this case is defined as the risk that insured benefits payable in life or health business may be higher than expected.

In life reinsurance, biometric and lapse risks are especially relevant. Mortality and disability are the most significant biometric risks. The assessment of our business on an embedded-value basis is based on biometric actuarial assumptions, which are regularly reviewed and adapted to include new findings, in particular relating to our own experience and expected future developments.

Of importance for health primary insurance are the biometric risk, the lapse risk and the benefits risk for long-term policies. However, if there are permanent changes in the biometric actuarial assumptions, i.e. assumptions regarding mortality and morbidity development, there is generally the possibility of a premium adjustment. For short-term health insurance business, on the other hand, the primary risk is a sudden increase in expenses due to exceptional one-off events, e.g. pandemics.

Depending on the contract structure, the risks of health primary insurance are reflected in the generally short-term contracts for health reinsurance.

The remarks on underwriting guidelines and limits (see "property-casualty" section) also apply to life and health reinsurance business.

Market risk We define market risk as the risk of economic losses resulting from changes in values in the capital markets. This includes equity risk, interest-rate risk, property risk and currency risk. We also include in market risk the risk of changes in credit risk spreads, inflation rates and implicit volatilities (cost of options). Fluctuations in market prices affect not only our investments but also our underwriting liabilities.

Control of market risks by means of suitable limit and early-warning systems and through our asset-liability management

We deal with market risks by means of suitable limit and early-warning systems and through our asset-liability management. We limit the deviations in actual investments from those investments that are economically required to cover underwriting liabilities with minimum market risk (referred to as the replicating portfolio). Applying stress tests, sensitivity and duration analyses, we simulate market fluctuations and devise strategies for counteracting them where necessary.

We mainly use derivative financial instruments to hedge parts of the portfolio, optimise earnings or implement planned purchases and sales. For this, strict rules apply as regards the limitation of risks and the choice of top-quality business partners. Adherence to these rules is continually monitored.

Beyond this, derivatives are used in isolated cases to hedge against risks assumed in underwriting business. Securitisation of insurance risks and their placement on the capital markets is gaining in importance as an instrument of risk transfer to supplement traditional reinsurance. Here, an underwriting risk is ceded by way of a retrocession contract (swap contract) to a special-purpose vehicle (insurance derivatives I). The special-purpose vehicle covers potential liabilities arising from the contract by issuing insurance bonds (cat bonds). In addition, Munich Reinsurance Company itself has cat bonds in its portfolio. These in turn contain derivative components to be accounted for separately (insurance derivatives II). The options on catastrophe and reinsurance risks (insurance derivatives III) also serve a hedging purpose. Further information on the carrying amounts and fair value of the derivatives is provided on page 106 in the notes to the financial statements.

With the exception of equity futures, stock index futures, Bundfutures and interest-rate index futures, all the derivatives are over-the-counter products.

The investments we make in our operations must meet the requirements of our General Investment Guidelines, which lay down the Group-wide minimum standards for operational investments. Furthermore, we take account of associated restrictions for investments resulting from our risk strategy.

The following sensitivity analyses for market risks serve to estimate potential changes in the value of investments under hypothetically possible market scenarios. The review is based on the Company's investments excluding participations in insurance companies, holding and service companies as at 31 December 2009. The changes in share price assumed in these scenarios, $\pm 10\%$ and $\pm 20\%$ respectively, a corresponding shift in the interest rate curve of ± 100 and ± 200 basis points (BP) respectively, and a fluctuation in exchange rates of $\pm 10\%$, would produce the following changes in the market value of the investments:

Market risk - Share prices	Change in market value of investments sensitive to share prices
Increase of 20%	€0.691bn
Increase of 10%	€0.345bn
Decrease of 10%	-€0.345bn
Decrease of 20%	-€0.690bn
Market values at 31 December 2009	€2.713bn

Market risk - Interest rates	Change in market value of investments sensitive to interest rates
Increase of 200 BP	-€3.527bn
Increase of 100 BP	-€1.887bn
Decrease of 100 BP	€2.134bn
Decrease of 200 BP	€4.514bn
Market values at 31 December 2009	€37.156bn

Market risk - Exchange rates	Change in market value of investments sensitive to exchange rates
Increase of 10%	€1.745bn
Decrease of 10%	-€1.745bn
Market values at 31 December 2009	€21.948bn

A breakdown of investments is available on page 30.

Risks from our portfolio of participating interests are controlled by closely involving the companies concerned in our Group-wide planning and controlling process.

Credit risk We define credit risk as an economic loss which the Company could incur as a result of changes in the financial profile of a counterparty, issuer of securities or other debtor with liabilities towards us.

In addition to credit risks arising out of investments and transactions with suppliers and clients, we actively assume credit risk through the writing of reinsurance business. This includes trade credit reinsurance and surety business, financial reinsurance (life and non-life) and the granting and insurance of loans. Credit risks can also arise through reinsurance, risk transfers to the capital markets and other financial transactions.

Our internal risk model also takes account of a wide range of specific drivers that impact on our credit exposure. Credit risk emanating from the insurance and investment sides of the balance sheet are considered. On the insurance side, we model trade credit, surety and bonding, and political risks. We also take into consideration credit risks associated with claims on our retrocessionaires after allowing for any collateralisation. On the investment side, credit risks are measured and limited using the Credit-Value-at-Risk (CVaR) approach with a standard "asset value" model. The main input parameters are our investment volume, the migration matrix between different rating classes, interest-rate curves and recovery rates. The correlated rating class migrations and defaults of the respective bond issuers are modelled using a simulation. Revaluation of our investments under these rating scenarios ultimately leads to a future profit and loss distribution. Hence, we can then adequately capitalise for this risk and manage our portfolio with respect to its expected and unexpected loss.

In order to monitor and control our credit risks, we have implemented a cross-balance-sheet counterparty limit system. The limits per individual counterparty (a group of companies or country) are based on its financial situation and the risk tolerance defined by the Board of Management. The limit per counterparty is broken down for the reinsurance segments, and for the underwriting and investment sides. The basis for the exposure figure is the estimated financial loss in the event of default by the counterparty, after realisation of collateral (loss given default – LGD). These factors are estimated on the basis of historical evaluations and expert opinions.

In order to take account of other country risks besides credit default, our Group Development function also prepares a specific country rating in addition to the pure default rating. This is not included in the limit calculation, but has to be considered in underwriting and investment decisions. It covers political, economic and security-related country risks, thus permitting an additional comprehensive assessment of country risks, which are relevant in different ways for the individual fields of business. Beyond this, we monitor and – if necessary – limit our accumulations in certain sectors and regions.

In the area of **retrocession**, we control the default risk through the Retro Security Committee, which monitors the quality of our potential retrocessionaires independently based on various criteria (such as minimum ratings and capital requirements), and issues appropriate limits. With this system, we achieve a broad and high-quality spread of our cessions in the reinsurance market.

Ceded claims provisions and provisions for future policy benefits	31.12.2009	Prev. year
%		
AAA	15.5	19.5
AA	83.0	78.7
A	0.1	0.0
BBB or lower	0.0	0.0
No rating available	1.4	1.8

The credit exposure on capital market placements, such as our catastrophe bonds, is generally reduced by the deposit of first-class collateral or the integration of suitable hedging mechanisms. In our fixed-interest investments, we control the related credit risk by selecting issuers of suitable quality and observing counterparty limits. We set very high standards for issuers, which are also reflected in our investment principles. There are additional limits on investments in structured products according to their risk profile.

As at 31 December 2009, our accounts receivable on ceded business were split between the following ratings (based on those of Standard & Poor's):

Rating of accounts receivable	31.12.2009
€m	
AAA	0.1
AA	15.0
A	108.2
BBB or lower	0.1
Without external rating	10.5

€36.8m of all our receivables on underwriting business at the balance sheet date was outstanding for more than 90 days. The average defaults of the last three years total €2.8m.

The remarks on underwriting guidelines and limits (see "property-casualty" section) also apply to credit risks incurred through insurance business. Responsibility for the issue of underwriting guidelines and credit limits lies with IRM.

Operational risk Munich Re defines operational risks as potential losses resulting from inadequate processes, technical failure, human error or external events. These include criminal acts committed by employees or third parties, insider trading, infringements of antitrust law, business interruptions, inaccurate processing of transactions, non-compliance with reporting obligations and disagreements with business partners.

Through our comprehensive internal control system, we identify and mitigate these risks (see page 75). It is our declared corporate aim, which we consistently pursue, to make employees aware of the potential risks and to establish an appropriate risk culture. This includes willingness to learn from mistakes and to recognise them as opportunities for improvement.

Liquidity risk Our objective in managing liquidity risk is to ensure that we are in a position to meet our payment obligations at all times.

In general, our reinsurance business continuously generates significant liquidity, as premium income is usually received some time before claims and other benefits are paid to our clients.

In addition, at Munich Re we attach particular importance to

- // prudent, real-time cash-flow management,
- // a balanced investment structure aligned with our financial obligations, with investment primarily in asset classes that take due account of security, liquidity and ability to realise at market prices and
- // frequent simulation of the impact of particular burdens on our liquidity.

Management of the liquidity risk in the framework of our overall risk strategy

We also manage liquidity risk in the framework of our overall risk strategy, with the Board of Management defining limits for liquidity risk, on which minimum liquidity requirements for our operations are based. These risk limits are reviewed annually and compliance with the minimum requirements continuously monitored. The management of liquidity risk takes account of the following:

- // known and expected payment obligations through regular, detailed liquidity planning at individual entity level and a central cash flow reporting system;
- // short-term margin and collateral obligations arising out of derivative positions where companies make use of such instruments;
- // unexpectedly high payments resulting, for example, from accumulation losses that far exceed normal loss expectations.

Strategic risk Munich Re defines strategic risk as the risk of making wrong business decisions, implementing decisions poorly, or being unable to adapt to changes in its operating environment. The existing and new potential for Munich Re's success and the segments in which it operates creates strategic risks, which generally arise early on and can lead to a significant long-term reduction in corporate value.

We counter this risk through the activities of our Strategy Committee, which discusses strategic planning and significant strategic issues and decisions, and regularly monitors their implementation. The Strategy Committee comprises members of the Group Committee, and hence the CRO, plus the CEOs of the business segments and the Head of Group Development. As a result, strategic decision-making processes are intermeshed with risk management. IRM is additionally involved in the operational business planning and in the processes for mergers and acquisitions.

Reputational risk Reputational risk is the risk of a loss resulting from damage to the Group's public image (for example with clients, shareholders or other parties).

We monitor reputational risk through the identification processes we have established in various internal units (e.g. Group Communications). As soon as such a risk is identified, our reaction is decided on by the Reputational Risk Committee, which was set up specifically for this purpose, with a view to ensuring that operational risks are not accompanied by reputational risks. The Committee is made up of experts from various units and is headed by the Compliance Officer. Rules of procedure regulate the functions and work of the Committee. Our Code of Conduct comprises the main rules and principles for legally correct and responsible behaviour by employees.

Munich Re's risk situation in 2009: manageable and under control

Overview of the risk situation

We assess our risk situation on the basis of qualitative and quantitative factors. This assessment is carried out by central risk management. Throughout the entire period under review, the Company's risk situation was manageable and under control. In the interests of our clients and shareholders, our carefully implemented, modern risk management processes combined with our solid level of capitalisation ensured the solvency and viability of the Group at all times. In addition to the underwriting and capital market risks inherent in our business model, which we consciously take and can therefore assess very well (see below), there are a large number of other risks to which Munich Reinsurance Company – like every other company – is exposed. The incidence of these risks is not planned and their occurrence probability and impact are generally difficult to estimate. We therefore attach great importance to closely monitoring our environment and our own Company to identify such risks in good time and to take suitable measures to avert loss or damage.

Internal risk model

For a quantitative assessment of the overall risk situation, we use our internal model, whose design follows a bottom-up approach. We have selected the financial year as the period for evaluating risk capital requirements at Group level. Risks within this period are covered by risk-based capital derived from our risk tolerance. All risks beyond the annual timeline are accounted for by the costs of holding risk-based capital over time. In so doing, we follow the "cost of capital" approach. In determining the risk capital, we examine the risk segments "underwriting", "market", "credit" and "operational risks". Within underwriting risks, we distinguish between property-casualty and life and health risks. Further subcategories are applied to these risk types – for example, for the property-casualty reinsurance segment, we distinguish between natural catastrophe risks, other accumulation losses (such as terrorism or liability accumulations), large losses and basic losses. Those risks are first modelled separately. In a further step, the risks are aggregated using a combination of empirical and judgemental techniques that allow for the risks of so-called "tail dependencies" (e.g. the risk that extreme events happen at the same time in different lines of business, geographies, and risk types) and the overall risk is thereby quantified.

Regulatory and rating-agency capital requirements

Munich Reinsurance Company meets the regulatory solvency requirements stipulating a specified minimum capitalisation supplemented by the criteria of specific ratings from the major rating agencies. More information is given in the "Financial position" section.

Selected risk complexes

Overarching accumulation risks

Effects of the financial crisis An example of overarching accumulations is the impact of the worldwide financial crisis.

On the insurance side, current indications are that Munich Re is potentially exposed mainly via the liability classes directors' and officers' liability (D&O) and professional indemnity (PI). Specifically, there is the prospect of liability arising out of alleged misconduct in the form of inadequate advice, mismanagement or negligence on the

part of sales organisations, banks or other financial intermediaries. Even if courts ultimately do not award damages, any defence costs covered under insurance policies could be considerable. Since such lawsuits are typically very prolonged, it will be several years before there is final clarity regarding the extent of the losses. At the turn of the year 2009/2010, we had received isolated provisional notifications from our liability reinsurance clients. We have taken these into account through appropriate allocations to IBNR reserves.

The upheaval in the international financial markets caused by the financial crisis is impairing economic recovery, with the related rise in insolvency rates leading to higher claims costs for the year in credit reinsurance. We expect a further increase in insolvencies in 2010. Both we and our cedants took account of this for the 1 January 2010 renewals by adapting our underwriting policy and conditions. We are withdrawing totally from some areas of credit reinsurance. We have tightened up our criteria and analysis processes for large transactions in life and non-life that involve substantial credit or liquidity risk.

Our exposure to credit risk on the investment side in 2009 was relatively low, though even we are not immune to the crisis due to our high investment volume. Our exposure in the financial sector – measured at market values – amounted to around €4.6bn at the end of the financial year. Much of our exposure (around 16%) is to the German financial sector. We took various measures during the year to counter the risk arising out of our exposure to the financial sector, including the introduction of tools for monitoring and limiting sector accumulations. The limits in our Group-wide counterparty limit system for certain banks were also subjected to a critical review and continuously monitored taking account of current market indicators.

Pandemic A further example of an overarching accumulation risk is a major pandemic. Like other companies in the insurance industry, Munich Re would be exposed to risks from a marked increase in mortality and morbidity and from disruptions in the capital markets. We counter this risk by analysing our overall exposure in detail (scenario analysis), defining suitable limits, and optimising our risk structure by transferring risk, e.g. through the launch of the Nathan pandemic bond programme.

No noticeable impact from swine flu so far

We were well prepared for the swine flu in autumn/winter 2009/2010. In recent years, we had already developed scenarios to quantify the pandemic risk, which are based on experience with Spanish flu (1918), Asian flu (1957) and Hong Kong flu (1968). We take into consideration parameters such as infection rates, duration of illness, excess mortality, etc. together with selection effects that produce a lower average mortality in the insured portfolio than among the population as a whole. So far, we have not observed any noticeable impact. Assumptions as to the further progress of swine flu are, of course, subject to uncertainty. Changes in the severity of the illness, the supply and effectiveness of medication and vaccinations and, notably, a mutation of the virus may have a considerable impact on future developments.

Climate change

Whilst we are in a position to adequately assess the known risks in our portfolio on the basis of current knowledge, scientific research into climate change is complex and the political and regulatory environment in which we operate is developing dynamically, so that we must remain vigilant with regard to the identification and representation of new and emerging risks. We adopt a multidisciplinary approach, using and combining the experience and expertise of our scientists, specialist underwriters, lawyers, economists, sociologists and actuaries.

Climate change represents one of the greatest risks of change for the insurance industry. In Munich Re's Corporate Climate Centre, we analyse and evaluate the related risks for all divisional units and for asset management. However, changes in the physical environment and new regulations resulting from climate change also open up many business opportunities. Applying the knowledge of this topic we have accumulated over decades, we exploit these opportunities – for example, through new insurance products for renewable energy technologies.

Emerging risks

Within our early-warning system, we also consider “emerging risks”. These are risks that may have unidentified effects on our risk portfolio due to changes in risk factors (e.g. legal, socio-political, scientific and technological), where the degree of uncertainty as regards the extent of damage and occurrence probability is by nature very high.

We identify trends and faint signals in many ways, including systematic trend research, using Munich Re's knowledge management, and regular structured discussions in our “emerging risks think tank”. To ensure that emerging risks are understood, a group of experts reports on the issues involved from various perspectives. They derive conceivable scenarios and analyse their possible impact on Munich Re. Of particular significance are interactions between different risks and other aspects related directly or indirectly to emerging risks. Cooperation with external partners complements our internal early-warning system. One example is our collaboration with the US Rand Institute for Civil Justice on the issue of class actions.

Legal and supervisory risks

As a result of our global activities, we are subject to a large number of supervisory regulations in different countries. These may give rise to legal and regulatory risks. In April 2004, New York State Attorney General Eliot Spitzer started an investigation into the use of Placement or Market Service Agreements (PSAs) in the insurance industry. Several other US state regulators subsequently commenced similar probes into this matter, as have regulators in other countries. We have received requests to provide information in connection with these investigations and are cooperating fully with the authorities. Munich Re entities have been named together with several other insurers and brokers as defendants in a number of PSA-related class actions by US policyholders. Munich Re denies any wrongdoing and will defend itself against the accusations in the appropriate manner.

In late 2004, the US Securities and Exchange Commission (SEC) and the Office of the New York State Attorney General initiated inquiries of Munich Reinsurance Company with respect to "certain loss mitigation insurance products". Subsequently, a number of other authorities in the USA and elsewhere made both formal and informal requests for similar information from the Company and some of its subsidiaries. We are fully cooperating with these inquiries.

In November 2009, the Spanish antitrust authority (CNC - Comisión Nacional de la Competencia) imposed fines on various insurers and reinsurers, including Munich Re's Spanish branch (Münchener Rückversicherungsgesellschaft, Surcursal España y Portugal), for alleged collusion restricting competition in Spanish decennial liability business (compulsory insurance for guarantee claims in respect of contract works). In December 2009, Munich Re's Spanish branch lodged an appeal against the CNC's decision in the expectation that the next higher instance will arrive at a different assessment of the facts.

After the federal legislative procedure for the US Fairness in Asbestos Injury Resolution Act founded in February 2006, several US states adopted legislation initiatives (tort reform) which may have a positive effect on the settling of asbestos claims. Following revelations about questionable asbestos-related disease diagnoses and resultant lawsuits, various investigation committees are at work. Similar questionable practices that have come to light in silicosis lawsuits are also relevant for US asbestos claims. These developments indicate that the legal situation in the USA is moving in a positive direction. However, it is too early to say whether and to what extent this will have favourable implications for future loss development in the insurance industry. We are aware that the plaintiffs' attorneys are trying hard to repel the tort reform. We are currently still being affected by late-reported claims - in some cases for high amounts - for asbestos-related diseases and similar liability complexes. Though the total number of asbestos claims is declining, the number of severe cases of mesothelioma and other types of cancer has remained relatively constant in recent years.

Outlook

The future regulatory requirements for risk management have become more transparent as a result of the progress made in the European Union's Solvency II project, notably the adoption of the Solvency II Directive in early 2009 and the draft implementation measures published by CEIOPS (Committee of European Insurance and Occupational Pensions Supervisors) at the year-end. Nevertheless, there are still considerable uncertainties regarding the future calibration of Solvency II.

Summary

In accordance with the prescribed processes, Munich Re's Board committees explicitly defined the risk appetite for significant risk categories in the year under review and quantified it by means of specific figures. We determined and documented the risk appetite and communicated it throughout Munich Re. During the whole of 2009, risk exposures were regularly quantified and compared with the risk appetite. Since exposure was always within the appetite, we assess Munich Reinsurance Company's risk situation as manageable and under control.

Prospects

- // Economic environment still difficult, despite further signs of recovery; challenges for the Group but also opportunities thanks to financial strength and know-how
- // Sharpened positioning in reinsurance
- // After systematic reallocation of investments from equities to interest-bearing instruments, expected return on investment distinctly below 4%
- // Adherence to long-term result target of 15% on risk-adjusted capital (RORAC) after tax over the cycle
- // Dividend proposal for 2009: €5.75 per share

Predictions about the forthcoming development of our Company are based primarily on planning figures, forecasts and expectations. Consequently, the following assessment of Munich Re's development merely reflects our incomplete assumptions and subjective views. It follows that we cannot accept any responsibility or liability in the event that they are not realised in part or in full.

Overview

The global economic recession seems to have bottomed out, but there is still great uncertainty as to whether the recovery will be sustained. Neither the job market nor the trend in real incomes has turned around yet. The demand for primary insurance and reinsurance therefore remains subdued. Even if the downturn has come to an end, it will take some time for economic performance to return to its pre-crisis level and for companies to again invest more and also insure this investment. Given the rising unemployment rate and economic uncertainty, consumers are reducing their expenditure on private provision. All the following prognoses are subject to considerable uncertainty in view of the difficulty involved in estimating future development, in particular if they go beyond the current financial year 2010.

Opportunities despite difficult economic situation

Yet even in this taut economic situation, there are opportunities open to us in various areas. We aim to take advantage of our global market and business presence and our strong capitalisation to expand into new areas and broaden those in which we already operate. We have responded to the steady shift in demand trends by repositioning ourselves in reinsurance. Our new Munich Re brand highlights our sharpened value proposition in offering clients tailor-made insurance solutions.

Economic parameters

Macroeconomic parameters are likely to improve further in 2010, which should also have positive implications for insurance demand and for expected returns on investments.

Economy

Moderate macroeconomic recovery expected for 2010

After the sharp downturn in the global economy, the first signs of a recovery began to emerge towards the middle of 2009, a trend that is expected to continue in 2010. The industrial countries will probably show moderately positive growth. More momentum will come from the emerging economies, especially China and India. It is to be feared that despite any economic upturn, the steep rise in unemployment will persist, particularly in the developed economies, with a weakening effect on private consumption. The high level of household debt in a number of countries, including the USA, should also contribute to consumer reluctance. The German economy is likely to recover in line with export demand. With the expected return of global demand, prices for consumer goods and raw materials will rise again. The international increase in public debt, which in some cases has been pushed to historic proportions by economic programmes and the support for the financial markets, is likely to affect countries' economies in the medium to long term.

Capital markets

For the capital markets, 2010 will be a year of transition, in which the after-effects of the crisis and reduction in monetary and fiscal policy stimuli will need to be absorbed. In this environment, we anticipate a modest increase in the yield levels of long-term government bonds. Higher-risk investments should be subject to high volatility again in 2010, reflecting the remaining uncertainty about the economy, the stability of the financial system, and a withdrawal – with minimum impact on the market – from the expansive monetary policy practised thus far.

At present, we see no signs of a further weakening of the US dollar. Following the very accommodating monetary policy pursued by the United States until now, we anticipate that 2010 will bring some initial tightening measures that should strengthen the dollar. In addition, a reduction in the US trade deficit could contribute to a positive development of the US currency.

Insurance industry

The anticipated global economic recovery should also have a favourable effect on the insurance industry in 2010. In most of the developed markets, slight growth in premium income is therefore expected. Growth dynamics in the emerging countries should be somewhat more pronounced. In individual areas of life, health and personal accident insurance, delayed effects of the crisis are to be feared, such as the consequences of higher unemployment. Likewise, individual segments of property-casualty insurance could continue to suffer in the short term from the impact of the financial crisis. It cannot be ruled out, for instance, that a significant portion of the losses in professional indemnity insurance will not occur until a later stage. Other segments such as credit and surety business, however, should benefit directly from an economic upswing and record lower losses. For life insurance, the development of interest-rate and return levels is a crucial success factor. Although demand for life insurance cover should pick up again as the prospects for the economy improve, the profitability of the business could suffer in the long term if the financial crisis triggers a prolonged phase of low interest rates.

Risk-adequate terms and conditions still essential

The improved capital situation is having a significant effect on prices, terms and conditions in the international insurance and reinsurance markets. Accordingly, the renewals at the beginning of the year showed a slight weakening of prices. In a number of segments that were hit more severely by the crisis, a further improvement in terms and conditions is expected. As a general principle, primary insurers and reinsurers must continue to ensure – in the interests of clients – that pricing remains risk-adequate.

Risks

Although the prospects for the economy have brightened considerably, the outlook remains comparatively uncertain. The durability of economic recovery is still unclear. A repeated slump or even extended period of stagnation with deflationary consequences cannot yet be completely ruled out. Furthermore, the implications of the massive government and central bank interventions and the reactions they provoke are difficult to estimate. For instance, a misguided monetary policy that, in the event of a sustained economic recovery, results in a higher rate of inflation in the medium term constitutes a significant risk for the insurance industry. Further risks may derive from the long-term impact of the crisis – for example in the form of subdued future growth potential. The implications for international trade, in particular as regards protectionist restrictions, remain unclear. Geopolitical threats, for instance in the Middle East or in eastern and southern Asia, are also still a significant risk for the insurance industry.

It remains to be seen whether and to what extent future political decisions will affect the insurance industry's business activity. Business fields with a link to social insurance, e.g. private health insurance, are subject to political risk. Moreover, the planned tightening of supervisory regulations in the financial services industry also harbours risks for the industry. There are concerns that the changes – mainly geared to banking – could be transferred indiscriminately to the insurance sector. Conceivable in this context are exaggerated capital requirements, excessive reporting obligations, and restrictions for individual types of business.

Unexpectedly fierce price competition in the insurance markets is another risk scenario. It could be aggravated by a recession-related drop in demand or politically induced restrictions on business activity. Keeping a clear focus on profitability before growth and on the efficiency of management systems will remain critical to the insurance industry's performance.

Munich Re's development

Underwriting

Reinsurance continues to hold considerable promise for the future, with a wide variety of earnings possibilities in the long term. Although the economic strains for primary insurers and their customers have an impact on reinsurers' growth and profit perspectives, reinsurance has gained in importance owing to the after-effects of the financial crisis, as its capital-relief function is in demand. At the same time, Munich Re sees a steady shift in demand trends in insurance and reinsurance, which is why we have sharpened our positioning. Our objective is to leverage insurance solutions individually for clients. Even more so than in the past, Munich Re will offer its clients specialist consulting services also for tasks such as balance-sheet management, risk modelling or asset-liability management – for instance to prepare for the restructured European supervisory regime (Solvency II). Clients can thus optimise their risk management, save risk capital or increase their return on investment with the same risk capital. A further focus is on devising innovative coverage concepts for new and complex risks. In addition, we aim to expand our client base in areas where risk expertise is the crucial success factor, i.e. in business with insurance pools or in public-private partnerships and specialist primary insurance niche segments.

Good growth opportunities in life reinsurance

Life reinsurance offers good growth potential in the short and long term. We will strengthen this segment further given its relatively low volatility and its importance as a component of diversification in our business portfolio. Over the short to medium term, we see unbroken demand among our clients for solutions to strengthen their capital base. Reinsurance is an efficient and flexible option for increasing solvency and is therefore much sought after at present, for instance in the form of large-volume quota share treaties. We anticipate that medium-term impulses for new business will derive from the implementation of Solvency II, a revived privatisation trend in provision for old age, long-term care and disability in the developed markets, the need for asset protection, and the dynamic expansion of the Asian life insurance markets. However, the development of our primary insurance clients' new business is temporarily coming under pressure because of declines in demand as a result of the economic crisis. A relapse of the economy into a severe recession could curb this growth, adversely affecting investment results as well as disability and suicide rates, with a respective downward impact on the result. As things stand at present, significant burdens from the ongoing flu pandemic appear less probable, since the disease has been very moderate in most cases, in spite of its rapid spread.

We are adhering to our objective of doubling the value added by new business in the period 2006 to 2011. On the basis of Market Consistent Embedded Value Principles, this objective corresponds to a value added by new business of €330m for the year 2011. Given the good results of recent years, we are at present confident of being able to achieve good results that exceed this target in future.

There are a host of growth avenues in the international healthcare markets, in particular due to advances in medicine and improved life expectancy. Outside Germany the connections between our Group's health insurers and their subsidiaries for other classes of business are less close. Munich Re has therefore housed its health specialists from primary insurance and reinsurance under the roof of the new brand **Munich Health**. This separate organisation combines health primary insurance outside Germany and reinsurance business in Germany. Munich Health covers large stretches

of the value chain, with services ranging from risk assessment and risk management to healthcare support and involving much more than just the assumption of risks. In this context, opportunities and risks will derive for our reinsurance business and for our health insurance subsidiary Sterling Life from the expected fundamental US health-care reform.

Renewals at 1 January 2010: Munich Re's stability, global presence and diversification have paid off

In **property-casualty reinsurance**, which is influenced by cycle-oriented market developments, Munich Re will adhere to its clear, profit-oriented underwriting policy and accept risks only at commensurate prices, terms and conditions.

At 1 January 2010, treaty business with a volume of around €7.9bn was up for renewal. Compared with earlier estimates, the capital markets recovered more quickly than expected. Primary insurers' and reinsurers' balance sheets have thus gained significantly in strength. Especially the capacity made available by reinsurers has increased. Besides this, there is greater pressure on primary insurance costs, which also has an impact on reinsurance costs. This combination of reduced, highly price-sensitive demand and increased supply is exerting pressure on prices worldwide. Only individual segments such as credit, aviation and some natural catastrophe covers have not followed this trend, owing to high claims expenditure in 2009 or general market trends.

In view of the softening market and sometimes no longer adequate prices, we refrained from writing various blocks of business due to our strict cycle management and clearly result-oriented underwriting policy. Of the total business up for renewal, 14.6% (around €1.2bn) was not renewed. In most cases, this concerned individual treaties which, owing to the deterioration in prices, were no longer attractive and thus did not meet our profitability criteria. We were able to compensate for the reduction in premium through strategic growth or profitable niche business on the one hand and opportunistic new business on the other. Overall, new business written accounted for around €700m. The renewals resulted in a reduction in premium of some €530m (-6.7%) on balance.

The renewal of natural catastrophe business in particular shows a heterogeneous picture. While risks and markets not affected by losses in the past year recorded significant price reductions of up to 10%, business that had been affected by specific claims in 2009 showed price increases that were quite substantial in some cases. In this context, it is necessary to take into consideration that US natural catastrophe business in the previous year had been characterised by a very high profitability level, due to the influence on prices of the prior-year claims and reduced capacity. This business is therefore still attractive, despite the decline in prices.

An overall analysis clearly shows that by consistently focusing on the profitability of our portfolio, we were able to buck the international trend, keeping price levels fairly constant at -0.3% compared with the previous year and also maintaining the quality of our portfolio. In this market environment, Munich Re's stability has paid off. Thanks to our global presence and broad diversification, we are in a position to offset falling prices in individual markets and segments with rising prices in others.

For the forthcoming renewals at 1 April 2010 (Japan and Korea) and 1 July 2010 (parts of the US market, Australia and Latin America), a premium volume of around €2.5bn will be up for renewal. We expect that here, as in the January renewals, markets will move sideways at best, with a slight downward tendency. An exception will be segments affected by specific losses. There is as yet no indication of a clear trend reversal.

For property-casualty reinsurance overall, our expectation for 2010 is a combined ratio of around 98% of our net earned premiums, and we project a combined ratio of some 97% over the market cycle as a whole. This projection is based on an average major-loss burden of 6.5% from natural catastrophes, which takes account of shifts in the portfolio. Since we were affected by very severe accumulation loss events at the end of February 2010, i.e. the earthquake in Chile and Windstorm Xynthia over Europe, we will only be able to achieve our target if random major losses remain below expectations in the further course of the year. This estimate involves a number of imponderables deriving from the random incidence of major individual losses and from the fact that recession-related exceptional burdens cannot be disregarded in view of the still uncertain and difficult economic situation.

Measures against climate change open up growth opportunities

Measures to counter climate change offer us good business opportunities in property-casualty reinsurance. In cooperation with industrial insurance broker Marsh and photovoltaic producer Signet Solar, Munich Re has launched an innovative insurance solution to cover the risk of a performance deterioration in photovoltaic modules. It is a solution that covers the warranty given for Signet Solar modules over a period of 25 years, guaranteeing performance of at least 90% in the first ten years and at least 80% in the remaining 15. Designed specifically to meet the needs of the photovoltaic industry, this cover is of importance in financing the use of such technology. The energy project Desertec, in which we belong to a consortium of companies, also offers major business potential. Its aim is to produce sufficient power to meet around 15% of European electricity requirements and a substantial portion of the power needs of the producer countries. Desertec is intended to trigger a large number of infrastructure projects in the energy sector in southern Europe, the Middle East and North Africa. On 30 October 2009, a limited company was set up to serve as the planning entity. The insurance of such major construction projects throughout the world is already part of the core business handled by Munich Re's engineering experts. These increasingly include projects for generating renewable energy. Munich Re is actively promoting Desertec not just to pursue its own business interests but, more importantly, to make an essential contribution to reducing carbon emissions in Europe and thus curbing global warming.

In 2010, reinsurance (including health reinsurance written by Munich Health) should post a slight increase in gross premiums overall, provided that exchange rates remain stable and the cyclical losses in premium income for primary insurers and their impact on reinsurance keep within reasonable bounds and can be offset by additional business.

Investments

In 2009, the global economy continued to suffer from the consequences of the financial crisis. In the first quarter of the year, the situation further deteriorated in the international capital markets. The stock markets slumped worldwide, while the yields on government bonds and risk spreads for corporate bonds stayed at their historic lows or highs. A capital market rally was triggered by numerous economic programmes and political emergency measures in the further course of the year. Nevertheless, there is still considerable uncertainty regarding the durability of the recovery and future prospects.

Even though there has been less bad news of late and the economic and early indicators are slowly stabilising, we can by no means assume that the crisis is over. Economic forecasts are thus subject to exceptional uncertainty. The development of Munich Re's

investment strategy is therefore based on various scenarios, enabling us to respond flexibly to future trends and keeping us protected from extreme situations. Overall, we essentially aim to maintain our relatively cautious risk profile.

To achieve stable results in these still difficult times for the capital markets, we plan to increase our investment in real assets. By broadly diversifying our assets, we also protect ourselves more effectively from the impact of potential inflation. We are therefore considering the possibility of prudently expanding our share of equities and commodities. Furthermore, we are looking to invest in renewable energy, thereby keeping our options open in various scenarios and ensuring that we can participate in a potential recovery of the capital markets. It is this prudent investment policy that has helped us weather the crisis, particularly in the past two years.

We further expanded our portfolio of fixed-interest investments in the financial year 2009, especially by increasing our holdings of corporate bonds with a minimum rating of BBB. We do not plan to further expand this portfolio in 2010.

Besides this, we raised our investments in inflation-indexed bonds with the aim of further hedging the inflation sensitivity of our liabilities. At present, we see no indicators for an immediate rise in inflation in 2010. We are nevertheless preserving the option of moderately expanding our portfolio of indexed bonds in 2010. We marginally reduced our large portfolio of nominal government bonds compared with the previous year.

We intend to continue managing interest-rate risks by gearing the periods to maturity in our bond portfolio to match the periods of our liabilities. However, in order to profit from the currently steep yield curve, we will extend durations, particularly of our government bonds.

In the area of alternative investments, we intend to invest more strongly in renewable energy and new technologies. Given adequate profitability prospects, we envisage investing a sum of around €2.5bn over the coming years. We do not plan to actively expand our relatively small investment volume in hedge funds and private equity.

In previous years, we cut back our investment in real estate and kept it more or less constant at a market value of €2.2bn in 2009. Real estate thus accounts for a share of 3.5% of Munich Reinsurance Company's investments (excluding deposits retained on assumed reinsurance). We see the present market situation as an opportunity to further expand and internationally broaden our portfolio in order to hedge against inflation and improve the diversification of our portfolio. For 2010, we anticipate that real estate prices will remain at the same level.

We do not expect any significant increase in capital market interest rates for 2010; regular income from fixed-interest securities and loans is therefore likely to be relatively low. We have also considerably reduced the proportion of our investments in equities compared with previous years. Our exposure to impairments is thus marginal, but so is our opportunity to realise capital gains. As things stand at present, we therefore project lower investment results overall for the coming years, with a return distinctly below 4% on the portfolio for reinsurance business.

Munich Reinsurance Company

We are fundamentally interested in further strategic acquisitions if the purchase prices reflect the difficult economic situation and risks, thus enabling us to create attractive added value. This was not, incidentally, the case in the projects recently looked at by us, so that we did not submit any offers or the offers we made did not meet the sellers' expectations. Whilst state support schemes have brought a certain amount of stability, they also suppress the self-regulating mechanisms of the market, adversely impact the structure of competition, and curb private demand for capital owing to growing government debt. We trust that a gradual withdrawal of state aid will lead to a strengthening of the necessary consolidation trends on the supply side.

The Company has acquired further shares in ERGO Versicherungsgruppe AG from Bayerische Hypo- und Vereinsbank AG (HVB) via an investment company. This acquisition increases its direct and indirect holdings in ERGO's share capital to 99.69%. At ERGO's next Annual General Meeting on 12 May 2010, a squeeze-out resolution is therefore to be adopted. ERGO's minority shareholders will receive appropriate cash compensation for their shares.

We are adhering to our long-term objective of a 15% return on our risk-based capital (RORAC) after tax across the cycle, although it will be much more difficult to achieve this in a low-interest environment. In addition, given the volatility of the claims equalisation provision, a result forecast is subject to considerable uncertainty. We are generally proceeding on the assumption of a combined ratio of 98%, based on a major loss burden from natural catastrophes of 6.5%. This target remains achievable despite the claims burdens from the earthquake in Chile and Winter Storm Xynthia, although the further development of major losses in relation to the expected annual average will naturally be a significant factor. The good unadjusted technical result expected would lead to an allocation to the claims equalisation provision. Since investment income is likely to decline at the same time, we anticipate that the annual result for the financial year 2010 will be below that of 2009. This is also our current expectation for 2011.

Since November 2006, Munich Reinsurance Company has carried out share buy-backs with a total volume of €4bn. After concluding the 2008/2009 share buy-back programme as planned, we had originally proposed to carry out further share buy-backs totalling over €1bn for each of the following two twelve-month periods preceding the 2011 Annual General Meeting, but then put them on hold from April onwards owing to the uncertainties resulting from the economic crisis. In our estimation, the economic environment has now stabilised and our buy-back programme was resumed on 1 October 2009 after a seven-month break. By the Annual General Meeting on 28 April 2010 at the latest, we aim to buy back shares for a total purchase price of up to €1bn. By the end of February 2010, we had bought back a total of 6.0 million Munich Re shares with a volume of €648m. A decision on further buy-backs will have to be taken in due course, after weighing the options of organic and external growth.

Dividend proposal of €5.75 per share for 2009

But for the time being, our shareholders can look forward to the dividend for 2009, which – subject to the approval of the Annual General Meeting – will amount to €5.75 per share, thus exceeding the previous year's high level. For the financial year 2010 and beyond, our intention is to again pay our shareholders an annual dividend depending on the result for the year.

MUNICH REINSURANCE COMPANY REPORT ON THE 130TH YEAR OF BUSINESS 1 JANUARY TO 31 DECEMBER 2009

Financial statements at 31 December 2009	97
Balance sheet	98
Income statement	100
Notes to the financial statements	102

Balance sheet as at 31 December 2009

Assets	Notes					Prev. year
		T€	T€	T€	T€	T€

Notes to the financial statements

Recognition and measurement

Accounting basis The financial statements and management report have been prepared in accordance with the German Commercial Code and the German Stock Companies Act, the German Statutory Order on Insurance Companies' Accounting and the German Insurance Control Act, observing conservative accounting principles.

Intangible assets Intangible assets are measured at the acquisition cost less admissible straight-line amortisation or, where applicable, write-downs for impairment.

Investments Our real estate is valued at the acquisition or construction cost less depreciations admissible under German tax law, taking into account lower fair values where necessary.

The carrying amount of shareholdings in affiliated companies and other participating interests is generally the acquisition cost, written down for impairments in value where applicable.

Loans to affiliated companies and to participating interests, mortgage loans, registered bonds, and loans and promissory notes are generally recognised in the balance sheet at their nominal values. An exception are zero bonds, which are accounted for at amortised cost. The relevant premiums and discounts are shown as deferred items and placed to account pro rata temporis.

Shares, investment fund certificates, bearer bonds, fixed-interest and non-fixed-interest securities, and other investments are valued at acquisition cost or at the market price at the balance sheet date, whichever is the lower. Investments with participating interests have been classified under Section 341b of the German Commercial Code but have been valued according to the strict lower of cost or market principle, despite the alternative valuation option provided for.

Lower valuations from previous years are maintained for all our investments if the impairment in value is probably permanent. Where the market value at the balance sheet date was higher than the previous year's valuation, we have written back the value to the acquisition cost or the amortised cost.

Receivables Deposits retained on assumed reinsurance business, accounts receivable on reinsurance business and other receivables are recognised at the nominal values less any necessary adjustments of value.

Other assets Inventories are recognised at acquisition cost. Office furniture and equipment is valued at acquisition cost less admissible depreciations. The purchase price of low-value items is fully written off in the year of acquisition. Own shares are recognised at the lower of cost or fair value. Those earmarked for retirement are offset against the revenue reserves.

Deferred taxes Deferred taxes result from temporary differences between financial statement valuations and valuations prescribed for determining taxable income. We have not availed ourselves of the option under Section 274 para. 2 of the German Commercial Code to recognise deferred tax assets.

Technical provisions The technical provisions are calculated in accordance with the requirements of German commercial law. In all cases, we have taken into account the necessity of ensuring that our obligations from reinsurance business can always be met.

Unearned premiums are accrued premiums already written for future risk periods. They have been calculated in accordance with the principles of German commercial law, partly on the basis of information received from our ceding companies and partly using nominal percentages. Where unearned premiums are calculated using such percentages, these are based on many years of experience and the latest knowledge available.

The provision for future policy benefits is generally set up in accordance with the amounts reported to us by our ceding companies. Sufficient provisions, calculated using actuarial methods, have been posted for claims that have been incurred but not yet reported or not reported enough.

The actuarial assumptions used for their calculation include, in particular, assumptions relating to mortality, disablement, morbidity, interest-rate development, lapses and costs. These are estimated on a realistic basis at the time the insurance contracts are concluded and they include adequate provision for adverse deviation to make allowance for the risks of change, error and random fluctuations. The actuarial assumptions are adjusted if, and only if, the original provisions for adverse deviation are no longer considered sufficient.

Provisions for outstanding claims are generally established in accordance with the amounts reported to us by our cedants. They are posted for payment obligations arising from reinsurance contracts where the size of the claim or the timing of the payment is still uncertain. Part of the provision is for known claims for which individually calculated provisions are posted. Another part is for expenses for claims which are not yet known (e.g. because they have not been reported yet or have not yet manifested themselves). A third class of provisions covers claims which are basically known but whose extent has turned out to be greater than originally foreseen. All these provisions include expenses for internal and external loss adjustment expenses. The provision for outstanding claims is based on estimates: the actual payments may be higher or lower. The amounts posted are the realistically estimated future amounts to be paid; they are calculated on the basis of past experience and assumptions about future developments (e.g. social, economic or technological parameters) and using appropriate actuarial methods. Future payment obligations are not discounted but recognised at the future settlement value.

The item "claims equalisation provision and similar provisions" contains the amounts required in accordance with commercial law to mitigate fluctuations in claims experience in future years, plus the provisions for major risks.

The "other technical provisions" mainly comprise provisions for profit commission and the provision for anticipated losses.

Technical provisions apportionable to the business retroceded by us have been calculated in accordance with the terms of the retrocession agreements.

Other accrued liabilities Following the IFRS approach, the provision for pensions is shown as the present value of the pension obligations.

In 2003, the Company established a contractual trust agreement in the form of a two-way trust for its unfunded company pension obligations. To finance these obligations, it is necessary for the trust assets to correspond to the present value of pension obligations. In the process, however, account has to be taken of the difference between the actuarial interest rate relevant for measuring the obligations and the return attainable on the investments. Therefore, the present value of the pension obligations is calculated using an actuarial interest rate equivalent to the expected investment return. Moreover, based on studies of the Company's portfolio of pensioners, the mortalities of the currently used Heubeck 2005 G tables were also modified. We likewise take these mortalities into account in calculating the provisions for semi-retirement and anniversaries.

The reserve amount is €281m (278m) higher than the reserve amount pursuant to Section 6a of the German Income Tax Act, applying an actuarial interest rate of 6%. For calculating the liability, we apply an actuarial interest rate of 3.8% to 5.0%.

Except for the semi-retirement and anniversary provisions, which are measured using an actuarial interest rate of 3.3% and 5.0% respectively, the other provisions are posted in accordance with the probable requirements.

Liabilities Subordinated liabilities, deposits retained on retroceded business, accounts payable on reinsurance business, amounts owed to banks and other liabilities are stated at the amount repayable.

Foreign currency translation All business transactions are generally booked in the original currencies and recorded using the respective day's exchange rate in euros. The foreign currency amounts are retranslated for the balance sheet at the year-end exchange rate.

Realised exchange gains and realised and unrealised exchange losses are recognised in "other income" and "other expenses" respectively; unrealised exchange gains are neutralised through the formation of an appropriate provision.

The following table shows the exchange rates of the most important currencies for our business (exchange rate for €1 in each case):

Foreign currency translation	31.12.2009	Prev. year
Australian dollar	1.5953	1.99375
Japanese yen	133.56800	126.00800

The statement of changes in assets and investments is shown at year-end exchange rates.

Intangible assets consist mainly of purchased insurance portfolios and software.

The carrying amount of owner-occupied property totals €241m.

Of our total investments (excluding deposits retained on assumed reinsurance) with a carrying amount of €56,359m, an amount of €7,619m is deposited with ceding companies or foreign governments or in the custody of trustees nominated by us. In addition, investments of €459m are subject to a restraint on disposal and have been transferred to the custody of a trustee solely to safeguard pension commitments and the provision for comparable benefits.

To support Hypo Real Estate (HRE), the German federal government adopted a rescue package in October 2008, backed by the Deutsche Bundesbank and also the German financial services industry. As part of this rescue package, the Bundesbank granted liquidity assistance of €20bn, and a consortium of financial institutions subscribed to two HRE bearer bonds totalling €30bn with a maximum term up to the end of 2009. As from 23 December 2009, the two bonds were replaced by a €22.98bn bond issued by Deutsche Pfandbriefbank AG. This has a term of one year and is guaranteed by the German Financial Market Stabilisation Fund (SoFFin). Munich Re has taken up €108.3m of this bond, €37.3m in trust for companies of the ERGO Group. The bond is shown under "bearer bonds and other fixed-interest securities".

Derivative financial instruments (derivatives) are financial instruments whose fair value is derived from one or more underlying assets.

Derivatives are generally valued at the acquisition cost or their fair value at the balance sheet date, whichever is the lower. A pending liability is taken into account through the posting of a provision for anticipated losses. Upfront payments are capitalised and amortised over the term. In the case of the interest-rate swaptions, we deviate from this rule: these investments are always accounted for at fair value.

Total return swaps are part of the hedge fund certificates. They are calculated as the difference between the total market value of the funds and the respective capital component (zerobonds), in line with the accounting requirement to divide items into a capital component and a derivative component. The carrying amounts of the insurance derivatives (swap contracts and derivatives embedded in cat bonds) are derived in the same way from the market values of the related insurance risk bonds.

The equity forwards held for hedging purposes form a single valuation unit with the hedged portfolio – the derivative is not recognised in the balance sheet; any loss on the underlying business is thus shown only to the extent that it is not compensated for by the hedging transaction. The same applies to interest-rate swaps in connection with the fixed-interest subordinated bond of €1.5bn issued by the Company in June 2007.

Recognised valuation methods are used to determine the fair values of derivatives not traded on the stock exchange. Details may be obtained from the following table.

Derivatives	Pricing method	Parameters	Pricing model
Equity and index risks

The fair value of investments (excluding deposits retained on assumed reinsurance) amounts to €63.54bn. The relevant carrying amount totals €56.36bn. This results in valuation reserves of €7.18bn for the financial year 2009.

The valuation reserves contain hidden losses of €119m for investment holding companies, of which €33m is apportionable to one company whose sole object is the holding of shares in a listed company. Owing to current fluctuations on the capital markets, we regard a fair value based on the shares' stock market price as inappropriate. This is confirmed by the stock market price determined for these shares by the central reporting office of the German Insurance Association, which gives a fair value of the participating interest well above the book value. We have therefore refrained from making a write-down.

Further hidden losses of €15m are apportionable to an investment holding company whose sole purpose, too, is the holding of shares in a listed company. However, due to the low trading volume involved and small free float, the stock market price of these shares is not very meaningful. No write-down has been made because the net asset value per share is higher than the stock market price and also higher than the carrying amount per underlying share in the holding company.

There are also hidden losses of €71m for a subsidiary. Since these mainly reflect foreign-exchange effects in the valuation, we do not consider the impairment to be permanent. We have therefore refrained from making a write-down.

The valuation reserves also contain hidden losses of €5m for loans. No write-downs have been made, because the impairments in value are only temporary (the carrying amount corresponds to the loans' redemption amount).

The fair values of real estate are determined once a year, generally using the capitalised earnings value; new buildings are valued at cost at the balance sheet date. In the case of shares in affiliated companies, participating interests, equities, investment fund certificates and other non-fixed interest securities, the market prices on the balance sheet date are used if the investments concerned are listed on the stock market. If no market prices are available, we calculate the value using the discounted earnings method or use net asset values. In the case of unlisted new acquisitions, we use the acquisition cost.

The fair values of fixed-interest securities listed on the stock market are determined on the basis of the market prices at the balance sheet date. In the case of fixed-interest securities not listed on the stock market, we determine the values using recognised valuation methods in accordance with the present value principle on the basis of interest-rate curves.

(3) Information on shareholdings

The list of all our shareholdings is filed with the Company Registry in Munich under registration number HRB 42039.

Notes to the balance sheet – Equity and liabilities

(4) Equity

The total share capital of €587,725,396.48 at 31 December 2009 is divided into 197,401,624 registered no-par-value shares, each fully paid up and entitled to one vote.

The capital authorised for capital increases comprises the following items:

€m	31.12.2009
Authorised Capital Increase 2009 (until 21 April 2014)	280
Authorised Capital Increase 2006 (until 18 April 2011)	5
Total	285

The contingent capital is as follows:

€m	31.12.2009
To safeguard conversion rights or subscription rights from convertible bonds or bonds with warrants (Contingent Capital Increase 2005)	100
Total	100

The withdrawal from the revenue reserves due to the share buy-back programme amounts to €406m, whilst the allocation to the revenue reserves totals €1,229m. Net retained profits include a profit of €62m carried forward from the previous year.

By resolution of the Annual General Meeting on 17 April 2008, Munich Reinsurance Company was authorised to buy back shares amounting to a maximum of 10% of the share capital up to 16 October 2009. The Annual General Meeting on 22 April 2009 renewed this resolution, thereby authorising the Board of Management to buy back shares amounting to a maximum of 10% of the share capital up to 21 October 2010.

On 31 December 2009, a total of 5,491,447 Munich Re shares with a calculated nominal value of around €16.3m were held by Group companies. This represents 2.78% of the share capital.

On 6 May 2008, Munich Re's Board of Management decided on a share buy-back programme, thus availing itself of the authorisation granted by the Annual General Meeting on 17 April 2008, in accordance with Section 71 para. 1 item 8 of the German Stock Companies Act. In the period from 8 May 2008 to 11 March 2009, 7,692,180 Munich Re shares were acquired via the stock exchange. In addition, pursuant to the Board of Management's resolution of 29 January 2008 and the authorisation granted at the Annual General Meeting on 26 April 2007, 1,310,000 own shares were acquired using put options. The total of 9,002,180 own shares were then retired on 1 and 2 April 2009 in a simplified process, without reducing the share capital, by adjusting the proportion of the Company's share capital represented by each of the remaining no-par-value shares.

On 1 October 2009, Munich Re's Board of Management decided on a further share buy-back programme, thus availing itself of the authorisation granted by the Annual General Meeting on 22 April 2009, in accordance with Section 71 para. 1 item 8 of the German Stock Companies Act. The share buy-back is restricted to a total purchase price (excluding incidental expenses) of €1bn up to the 2010 Annual General Meeting. From 2 October 2009 to 31 December 2009, a total of 3,225,550 shares were purchased at an average price of €108.51. Altogether, 3,793,050 shares were acquired in 2009 at an average price of €107.16.

In 2009, no employee share programmes were set up for the employees of Munich Reinsurance Company, MEAG MUNICH ERGO AssetManagement GmbH or the ERGO Insurance Group (including ERV and almeda, formerly called Mercur Assistance, which now belong to ERGO). At Munich Reinsurance Company, there is a total of 255 shares left over from the 2008 employee share programme.

In addition, one subsidiary holds 1,831,795 shares to safeguard stock appreciation rights granted to the Board of Management and top Munich Reinsurance Company executives since 1999. In 2009, no shares were acquired to hedge these programmes, and a total of 62,060 shares were sold at an average price of €106.47.

In the financial year 2009, companies of the ERGO Insurance Group acquired 9,666 shares at an average price of €95.58 each and sold 16,163 shares at a price of €111.55 each to cover future commitments from the long-term incentive plans launched since 2002. Together with the remaining Munich Re shares acquired to safeguard the stock appreciation rights granted in previous years, the ERGO Insurance Group had a total portfolio of 294,093 shares at 31 December 2009.

MEAG MUNICH ERGO AssetManagement GmbH acquired 23,000 shares at €99.61 each and sold 2,319 shares at an average price of €106.16 in the financial year 2009 to safeguard obligations from its long-term incentive plan and thus has a portfolio of 139,754 Munich Re shares.

The acquisition costs of all Munich Re shares in the possession of Group companies at the end of the financial year totalled €579,739,065.18.

The Company has received the following notifications pursuant to Section 21 of the German Securities Trading Act regarding voting-right percentages (status at 31 January 2010):

In December 2009, BlackRock Inc., New York, USA, notified us that on 1 December 2009 its share of the voting rights in our Company had exceeded the threshold of 3% and totalled 4.58% (9,039,588 voting rights). These voting rights are attributable to BlackRock in accordance with Section 22 of the German Securities Trading Act (para. 1 item 6 in conjunction with sentence 2).

In January 2010, Warren E. Buffett, USA, notified us that on 19 January 2010 he held, either directly or indirectly, 3.084% of the voting rights (6,088,300 voting rights) in accordance with Section 21 para. 1 in conjunction with Section 22 para. 1 sentence 1 item 1 of the German Securities Trading Act. He also notified us, in accordance with Section 25 of the German Securities Trading Act, that on 19 January 2010 he held additional financial instruments directly or indirectly that gave him the right to subscribe for shares in our Company carrying 1.945% of the voting rights (3,840,000 voting rights). On 19 January 2010, he would on that basis have exceeded the threshold of 5% of voting rights in our Company, holding a total share of 5.029% (9,928,300 voting rights). The exercise date of the financial instruments is 11 March 2010.

In the past financial year 2009, AXA S.A., Paris, France, and the fund manager Alliance-Bernstein, which belongs to the AXA Group, notified us in accordance with Section 21 para. 1 of the German Securities Trading Act that their share of the voting rights in our Company had fallen below the notifiable thresholds of 5% and 3%.

(5) Subordinated liabilities

The subordinated bonds issued in 2003 with nominal values of €3,000m and £300m will mature in 2023 (euro tranche) and 2028 (pound sterling tranche) and are callable by us for the first time on 21 June 2013 and 21 June 2018 respectively.

In June 2007, the Company issued another subordinated bond with a volume of €1,500m. We have hedged the interest-rate risk by means of an interest-rate swap on the nominal amount of the bond. It is a perpetual bond, callable by us from ten years after the date of issue.

In 2009, we bought back and retired subordinated bonds with a nominal value of around €251m.

The remaining term of the subordinated liabilities with a total amount of €4,587m is more than five years.

Subordinated liabilities	31.12.2009
€m	
Subordinated bonds 2003/2023, €2,900m ¹ 6.75% until 2013, thereafter floating	2,900

¹ With original nominal value of €3,000m (thereof €2,900m outstanding).

² With original nominal value of €1,500m (thereof €1,349m outstanding).

(6) Special reserve

The special reserve has been posted in accordance with Section 6b of the German Income Tax Act. In the financial year 2010, owing to the introduction of the German Act to Modernise Accounting Law (BilMoG) and the related abolition of the "tax dictates financial accounting" principle, we will reverse the special reserve and add the amount concerned to the revenue reserves with no impact on profit or loss.

(7) Technical provisions by class of business

	Unearned premiums	Provision for future policy benefits	Claims provision	Claims equalisation provision and similar provisions	Other provisions	Total	Reserves as % of net premiums
€m							
Life	571	8,772	912	10	585	10,850	220
Health	149	1,038	246	5	22	1,460	77
Accident	60	300	3,747	14	25	4,146	1,253
Liability	212	-	10,587	716	-26	11,489	809
Motor	386	-	5,660	414	-84	6,376	406
Marine	231	-	1,130	548	8	1,917	214
Aviation	215	-	1,135	942	-1	2,291	438
Fire	595	-	2,583	3,559	64	6,801	220
Engineering	587	-	1,999	646	6	3,238	325
Other classes	255	-	1,733	1,170	65	3,223	215
Non-life combined	2,690	1,338	28,820	8,014	79	40,941	335
Total	3,261	10,110	29,732	8,024	664	51,791	302

The claims provisions shown have been influenced both by payments made in the year under review and by expenses or income from increasing or reducing the provision respectively.

Claims expenses for the year under review less the payments already made in the same year increase the provisions. The provisions for previous years are reduced by the payments made in the year under review for these years. As the provisions are determined using best estimates based on claims information and past claims experience, as well as estimates of future claims development, it is inevitable that the relevant estimate will regularly change as knowledge of claims cases grows in the year under review.

The claims equalisation provision and similar provisions break down as follows:

	31.12.2009	31.12.2008
T€		
Claims equalisation provision	7,664,244	8,395,207
Provision for major risks	360,195	349,217
Thereof:		
For nuclear facilities	72,608	72,015
For pharmaceutical products liability	74,457	70,442
For terrorism risks	213,130	206,760
Total	8,024,439	8,744,424

(8) Other accrued liabilities

We have agreed to pay pensions to nearly all our staff and their surviving dependants. These commitments are to be met partly by the company itself and partly by the Munich Re staff pension fund. There are pension provisions of T€95,612 for former members of the Board of Management or their surviving dependants.

The tax provisions contain deferred taxes of T€160,764.

The other provisions include, in particular, a provision of T€524,490 for unrealised currency gains.

For personnel expenses not yet payable on the balance sheet date, provisions of T€188,371 have been posted.

There are provisions of T€169,630 for anticipated losses from derivatives.

(9) Amounts due to banks

The amounts due to banks at the balance sheet date had a remaining term of less than five years.

Notes to the income statement

(10) Reinsurance underwriting result by class of business

	Gross premiums written		Underwriting result before claims equalisation provisions and similar provisions		Change in claims equalisation provisions and similar provisions		Combined ratio in %	
	2009	2008	2009	2008	2009	2008	2009	2008
€m								
Life	5,415	4,050	303	34	0	-1	-	-
Health	1,964	884	19	14	0	-1	99.1	98.4
Accident	354	379	-160	-339	-13	-	147.7	196.3
Liability	1,465	1,443	-786	-338	468	3	155.3	122.6
Motor	1,618	1,968	70	-296	82	142	95.7	116.2
Marine ¹	960	985	63	52	-110	-138	92.8	94.6
Aviation	590	519	56	38	-52	3	88.3	91.7

Engineering ¹	1,061	1,283	150	109	126	42	85.6	91.1
Other classes ¹	1,613	1,929	-566	132	433	-226	136.3	92.6
Non-life combined	12,907	12,445	202	-301	720	787	98.2	102.4
Total	18,322	16,495	505	-266	720	786	-	-

¹The previous year's figures have been adjusted owing to a change in class-of-business allocation.

(11) Interest on technical provisions

We have calculated the interest on technical provisions in accordance with Section 38 of the German Accounting Regulations for Insurance Companies and – where prescribed there – have transferred it from the non-technical to the technical account.

(12) Personnel expenses

The management expenses include the following personnel expenses:

	2009	Prev. year
T€		
Wages and salaries	340,242	329,325
Social insurance contributions and voluntary assistance	63,877	66,001
Expenses for employees' pensions	35,641	67,507
Total	439,760	462,833

In 2008, a reduction in the actuarial interest rate gave rise to expenses for pensions. In 2009, the actuarial interest rate remained virtually unchanged, so that the expenses for pensions are lower than in the previous year.

(13) Investment income

The write-ups result from the reversal of write-downs, in accordance with Section 280 para. 1 of the German Commercial Code, because the reasons for these write-downs no longer apply.

(14) Investment expenses

T€231,990 of the write-downs are apportionable to impairments as per Section 253 para. 2 sentence 3 of the German Commercial Code.

(15) Tax accounting influences

There are no tax accounting influences.

(16) Long-term incentive plans

Every year since 1 July 1999, Munich Reinsurance Company has set up long-term incentive plans, each with a term of seven years. Entitled to participate in these share-price-related remuneration plans are members of the Board of Management, senior management in Munich, and top executives in Munich Re's international organisation. Participants receive a certain number of stock appreciation rights.

The relevant initial share price for the stock appreciation rights is calculated from the average of closing prices for Munich Re shares in Frankfurt Xetra trading over the last three months prior to plan commencement. The initial price for the 2009 long-term incentive plan is €97.57. As a result of Munich Reinsurance Company's capital increase in the financial year 2003, the initial share prices for the stock appreciation rights issued up to then and the number of stock appreciation rights already granted were adjusted in accordance with the conditions. In the year under review, a total of 459,734 stock appreciation rights were granted, 151,667 of these to Board of Management members. The future obligations arising from the long-term incentive plans are covered by Munich Re shares.

The personnel expenses and income incurred for the stock appreciation rights are determined on the basis of the change in the fair value of the underlying options. The fair value recognises not only the intrinsic value (difference between current share price and initial share price of the stock appreciation rights) but also the possibility of growth in value up to the date of forfeiture or expiry of the rights and is determined on the basis of recognised valuation models, taking into account the exercise conditions. At each balance sheet date, the fair value is calculated and reserved; this amount is recognised in full. In the year under review, related provisions of €29.5m had to be posted. The personnel expenses recognised in the income statement correspond to the change in the provision in the year under review, taking into consideration any rights exercised. This resulted in income of €33.3m in 2009. The weighted average share price for the stock appreciation rights exercised in 2009 was €108.98 for plan year 2003, €108.92 for plan year 2004, and €108.54 for plan year 2005. The intrinsic value of the exercisable stock appreciation rights at the balance sheet date amounted to €11.6m.

Each stock appreciation right entitles the holder to draw in cash the difference between the Munich Re share price at the time when the right is exercised and the initial share price. The stock appreciation rights may only be exercised after a two-year vesting period and then only if the share price is at least 20% higher than the initial price. In addition, Munich Re shares must have outperformed the EURO STOXX 50 twice at the end of a three-month period during the term of the plan. The gross amount that may be

obtained from the exercising of the stock appreciation rights is limited to an increase of 150% of the initial share price.

Stock appreciation rights not exercised on the last trading day of the plan term are exercised on the participant's behalf insofar as the prerequisites for this are met. If the prerequisites are not met, the stock appreciation rights are forfeited. If another company acquires control of Munich Reinsurance Company or the Company's group of shareholders changes significantly due to a merger or comparable transaction or intended business combination ("change of control"), all plan participants may exercise their stock appreciation rights within 60 days after the change of control becomes effective, even if the prerequisites for exercising the rights are not yet met at that juncture.

(17) Mid-Term Incentive Plan

On 1 January 2009, Munich Reinsurance Company set up a Mid-Term Incentive Plan with a duration of three years. Eligible for participation in this cash-settled share-based remuneration plan are members of the Board of Management and senior management in Munich. The participants receive performance share units (PSUs). In the fourth year after plan commencement, participants are entitled to a bonus payment dependent on the achievement of value-based performance targets and the increase in the total shareholder return (TSR).

The plan conditions are structured as follows:

The calculation factors are, on the one hand, value-based performance targets and, on the other, the total shareholder return of Munich Reinsurance Company shares.

The value-based performance targets are set for the business fields of reinsurance, ERGO primary insurance and Munich Health in the form of an average target to be achieved over the years of the plan and are allocated according to responsibilities.

The share-based factor **TSR** represents the total return on Munich Re shares and comprises share price increases plus dividends paid over a certain observation period. The initial TSR value and the final TSR value are determined from the average of the last 60 days prior to plan commencement and plan termination respectively.

At plan commencement, the PSUs are granted as follows: the contractual target amount for 100% achievement of the performance targets is divided by the initial TSR value. The total return index of the Xetra listing of Munich Re shares, starting on 22 January 1996, is used for the TSR.

The final number of PSUs is calculated by multiplying the PSUs at plan commencement by the percentage achievement of the performance target at plan termination. The number of PSUs may fluctuate between 0 and 1.5 times the initially allocated number.

Payment is capped if the TSR doubles. The maximum amount payable is limited to 150% of the target amount for members of the Board of Management and to 300% of the target amount for senior management.

The basis for full and partial allocation of PSUs is the year of commencement (= first plan year). A pro rata temporis arrangement applies for participants joining or leaving the plan during the year.

The Mid-Term Incentive Plan at the reporting date is valued indirectly at the fair value of the liability. The fair value takes account of the value-based performance target and the total shareholder return during the performance period.

Munich Re's incentive plan 2009	Incentive Plan 2009
Plan commencement	1.1.2009
Plan end	31.12.2011
Fair value 2009 for one right	€191.38
Number of rights (for 100% achievement of objectives) on 1 January 2009	56,741
Additions	-
Forfeited	-
Number of rights (for 100% achievement of objectives) on 31 December 2009	56,741

In the financial year 2009, expenses of T€9,962 were recognised for the Mid-Term Incentive Plan. At the balance sheet date, the provision came to T€9,962.

(18) Remuneration report

The total remuneration of Munich Reinsurance Company's Board of Management amounted to €17.8m and that of the Supervisory Board to €1.5m. All other disclosures on the remuneration of and loans to Board members, share trading and shares held by the members of the Board of Management and the Supervisory Board, and the structure of the Board of Management's remuneration system can be found in the remuneration report on page 56.

Payments to retired members of the Board of Management or their surviving dependants totalled T€5,709.

Personnel expenses of T€0 were incurred for pension commitments to retired members of the Board of Management. As at 31 December 2009, the pension provisions and provisions for comparable benefits for former members of the Board of Management and their surviving dependants amounted to T€95,612.

The members of the Supervisory Board and Board of Management did not receive any cash advances or loans in the year under review; no contingent liabilities were entered into for their benefit.

(20) Number of staff

The number of staff employed by the Company in Munich and at its offices abroad in the financial year 2009 averaged 3,969 (3,649).

(21) Auditor's fees

Information on the auditor's fees can be found in Munich Re's Group annual report.

(22) Contingent liabilities, other financial commitments

Munich Reinsurance Company has assumed a guarantee for certain reinsurance liabilities of Munich American Reassurance Company (MARC Life). In addition, an agreement has been signed under which Munich Reinsurance Company guarantees to maintain the company's solvency capital above the level required by supervisory law.

There is an agreement between Munich Reinsurance Company and Munich American Capital Markets in which a target minimum capitalisation and the liquidity of the subsidiary is guaranteed.

For three foreign subsidiaries, a guarantee for office rents in the full amount, equivalent to €3.2m per annum, has been assumed.

Moreover, Munich Reinsurance Company has assumed a guarantee of €500,000 for a small German subsidiary's pension obligation towards a former member of its Board of Management.

In isolated cases, we have given guarantees concerning the correctness of individual items warranted in the sales contract when buying or selling investments. An obligation to pay compensation for disadvantages is included in some of these guarantees, most of which are for a limited period of time.

For one of its subsidiaries, Munich Reinsurance Company has assumed a guarantee to fulfil all financial obligations resulting from the sale of equities and interests.

As a member of the German Reinsurance Pharmapool and the German Nuclear Insurance Pool, we are committed – to the extent of our proportional share – to assuming the payment obligations of another pool member if the latter is not able to meet these obligations.

In the event of the need to repay state subsidies totalling €68,000, Munich Reinsurance Company has guaranteed sufficient capital resources for one of its subsidiaries.

There are other financial commitments amounting to €511m (€417m of these towards affiliated companies). They result mainly from commitments to inject capital into various investment funds, agency and leasing agreements, and initiated investment projects.

Beyond this, there are no off-balance-sheet transactions which are material for the assessment of the Company's financial position.

Information on open forward transactions can be found on page 106 of this annual report.

(23) Declaration of conformity with the German Corporate Governance Code in accordance with Section 161 of the German Stock Companies Act

In November 2009, Munich Re's Board of Management and Supervisory Board published an updated declaration of conformity with the German Corporate Governance Code as per Section 161 of the German Stock Companies Act and made this declaration publicly available on the internet.

(24) Proposal for appropriation of profit

The net retained profits at the disposal of the Annual General Meeting amount to €1,291,060,272.38. The Board of Management proposes that this amount be appropriated as follows: payment of a dividend of €5.75 on each share entitled to dividend and allocation of €156,000,934.38 to "other revenue reserves", with the dividend amount apportionable to own shares held directly or indirectly or already retired at the time of the Annual General Meeting being carried forward to new account.

Drawn up and released for publication, Munich, 2 March 2010

The Board of Management

Auditor's report

The following is a translation of the auditor's opinion in respect of the original German financial statements and management report:

We have audited the financial statements prepared by the Münchener Rückversicherungs-Gesellschaft Aktiengesellschaft in München, Munich, comprising the balance sheet, the income statement, and the notes to the financial statements, together with the bookkeeping system and management report for the business year from 1 January to 31 December 2009. The maintenance of the books and records and the preparation of the annual financial statements and management report in accordance with German commercial law and supplementary provisions in the Articles of Association are the responsibility of the Company's Board of Management. Our responsibility is to express an opinion on the annual financial statements, together with the bookkeeping system, and the management report based on our audit.

We conducted our audit of the annual financial statements in accordance with Section 317 of the German Commercial Code and German generally accepted standards for the audit of financial statements promulgated by the German Institute of Certified Accountants (IDW). Those standards require that we plan and perform the audit such that misstatements materially affecting the presentation of the net assets, financial position and results of operations in the annual financial statements in accordance with the principles of proper accounting and in the management report are detected with reasonable assurance. Knowledge of the business activities and the economic and legal environment of the Company and expectations as to possible misstatements are taken into account in the determination of audit procedures. The effectiveness of the accounting-related internal control system and the evidence supporting the disclosures in the books and records, the annual financial statements and the management report are examined primarily on a test basis within the framework of the audit. The audit includes assessing the accounting principles used and significant estimates made by the Board of Management, as well as evaluating the overall presentation of the annual financial statements and management report. We believe that our audit provides a reasonable basis for our opinion.

Our audit has not led to any reservations.

In our opinion, the annual financial statements give a true and fair view of the net assets, financial position and results of operations of Münchener Rückversicherungs-Gesellschaft Aktiengesellschaft in München in accordance with principles of proper accounting. The management report is consistent with the annual financial statements and as a whole provides a suitable view of the Company's position and suitably presents the opportunities and risks of future development.
