

Case Study: Retail motor pricing

From traditional to online

Adjusting the commercial rate to improve the growth on new business

Initial situation

- Motor retail business in an advanced market
- Aggregators turned on the digital competition
- The client has a consolidated market share on intermediate channel and wants to gain new space on aggregators

Project approach

- Development of conversion model leveraging on AutoML
- Measuring clients' elasticity
- Deploying models in production
- Adjusting the commercial rate according to clients elasticity

Result

- Improved conversion by **5%**
- Increase of top line of **6%**
- Lower predicted LR for newly converted profiles
