

# International Code Singapore MOM

HSB, a Munich Re company, is a technology-driven company built on a foundation of specialty insurance, engineering and technology, all working together to drive innovation in a modern world.

HSB's network of worldwide offices supports exporting pressure equipment into international markets. We understand local regulations and rules.

### **Singapore MOM (Ministry of Manpower)**

In Singapore, the Occupational Safety Department of the MOM approves, accredits, and registers certain classes of personnel and organizations that are empowered to perform specific duties and services. Before any pressure vessel can be installed, erected, or used in Singapore, approval must first be obtained from the Director of Occupational Safety or his approved representative. The approval process for manufacturers outside of Singapore includes the receipt of a fabrication survey report from an Inspection Body accredited to ISO 17020 with a mutual recognition arrangement accepted by the Singapore Accreditation Council, certifying that the pressure vessel has been fabricated and tested in accordance with ASME, BSI (British Standard Institute), JIS (Japanese Industrial Standards), AD2000, BS EN, or DIN Standards. Use of other pressure vessel codes requires prior approval from the MOM Chief Inspector.

Only qualified inspectors employed by an accredited Inspection Body may carry out fabrication surveys and sign the survey reports. The designated accredited Inspection Body shall ensure that the pressure system that they surveyed complies with the code requirements, the Singapore Factories Act, and all legislation made under the Act.

MOM recognizes HSB as an accredited ISO/IEC 17020:2012, Type A Inspection Body for performing inspections and to act on behalf of MOM to perform services outside of Singapore as needed for compliance.

HSB delivers:

- The required design reviews (approval stamp of the drawings and design review certificate)
- Local inspections (issue an Inspection Certificate)
- Numerous inspectors qualified under AOIA status
- Extensive MOM inspection experience through a wide range of customers in many countries

## HSB provides

<b>Single-Source Inspection Service</b>	HSB can perform inspections of all your pressure equipment requirements.
<b>Global Coverage</b>	HSB's engineers and inspectors around the world allow us to cost-effectively manage complex, multi-site inspections involving a variety of standards.
<b>Local Presence</b>	We have local representation in Europe, Asia, and the Americas, so you can strategize globally and act locally.
<b>Responsiveness</b>	HSB responds quickly to urgent situations that require accelerated project schedules and high levels of responsiveness.
<b>Global Inspection Staff</b>	HSB has more than 450 pressure equipment inspectors and supervisors. We have National Board nuclear and nonnuclear-commissioned inspectors in Asia, Europe, the Middle East, and North and South America.
<b>Client Focus</b>	HSB ensures that the delivered services meet clients' needs and requirements. Services can include everything from incoming material approval to installation and testing.
<b>Experience</b>	HSB brings together our knowledge of the ASME Codes and Standards, quality program development, and surveillance activity, and combines it with our unique understanding of many international codes, which helps you save time and money.
<b>Support</b>	HSB is approved to perform pressure equipment inspections to almost all international codes and standards, and HSB often assists clients with design reviews and product inspections for international use.
