

HSB Solomon Oil and Gas Carbon Emissions Dashboard

12/06/2023
Marina Barta
Paul Cannizzo

Energy Industry-wide standard for benchmarking

Global leader in carbon emissions and energy efficiency metrics

We understand Performance Data at the LOWEST level

Supporting clients through their energy transition

How to measure climate change?

Industry looking for trusted, data-driven standards to monitor real change

Creating a game changing solution

Partnering to solve challenges

Munich Re

- Began search over 2 years ago
- Reached out to Solomon for Oil and Gas domain intelligence

The Challenge

- Measure and track greenhouse gas footprint of Oil & Gas insurance portfolio
- Evaluate portfolio and create monitoring to reduce greenhouse gas footprint

The Solution

- A dashboard with transparent, auditable data, complete lifecycle analysis (Scope 1,2,and 3) covering 98% of global oil and gas production
- Support public financial statement disclosures to reduce carbon footprint of insurance portfolio

Realized Value

- Enable portfolio emissions comparison against targets to demonstrate achieved carbon footprint reduction
- Provides direction for future portfolio optimization

Impact to strategic portfolio decisions

Make REALISTIC Decisions

Provides the data-driven INSIGHTS to allow you to drive REALISTIC changes to the emissions footprint of your insurance portfolio

Drive REAL transformation with value added services versus just divesting high emissions assets, which shifts the problem and limits actual change

Thank you for your attention!
