Munich Re's Smart Mobility program is a simple approach to the complex issues surrounding auto risks. It delivers customized technology-driven risk management solutions (including Virtual Risk Manager) to help mitigate our clients' auto losses and prepare for the future of mobility.

Product summary

Virtual Risk Manager by eDriving, LLC is a holistic infrastructure to improve long-term driver safety. It facilitates safety leadership at all management tiers by proactively identifying at-risk drivers through the integration of incident and collision, telematics, license check and other data universes. The platform, white-labeled with your brand, creates risk reduction plans for high-risk drivers and identifies the safest drivers for recognition. It delivers state-of-the-art training and assessment materials directly to drivers/managers on a global scale.

Process

Virtual Risk Manager reinforces mission-critical, non-negotiable policies and standards designed to keep drivers (and the community) safe while driving for work purposes. It performs a 'proactive'

RoadRISK® driver/organization self-assessment and gap analysis that identifies the most at-risk drivers. The driver's data is integrated from the Mentorsm smart-phone app, a vehicle installed dongle, or your existing fleet management system, to develop a DriverINDEX score – an objective evaluation of individual driver performance. The conclusions derived from the DriverINDEX score lead to specific training modules targeting identified risk exposures and aiding in best practice awareness. All data points are captured in one platform, allowing the manager to monitor performance, oversee driver training and benchmark against internal and external performance analytics.

Benefits

The platform complies and/or exceeds international best practices, such as ANSI Z15 and ISO 39001.

Virtual Risk Manager creates a platform for continuous improvement of the risk and liability exposures faced by your organization, persons driving for work and the community at large.
