

True or false? How organizations answer can mean saving time, money, and the bottom line

Organizations that can't answer "true" to all these questions could be setting themselves up for unexpected equipment breakdowns that can disrupt daily operations and ding their budget with unplanned, costly repair bills.

1

They know what equipment is in their buildings.

True False

2

They know where equipment is located, and its condition.

True False

3

They adhere to a regular maintenance schedule.

True False

4

When they need repairs, they can easily find the right part and trusted service providers.

True False

Ditch spreadsheets for scheduling

Most organizations still manage their equipment maintenance using pen and paper, Excel, or no system at all. They're often reactive to maintenance instead of managing it, aren't using authorized service providers, and show poor management results in **up to 43% higher maintenance costs**.

An easy solution for maintaining equipment, brought to policyholders, from HSB

Organizations that carry HSB equipment breakdown coverage now have access to an online platform that simplifies the maintenance process for everything from air conditioning to heating equipment.

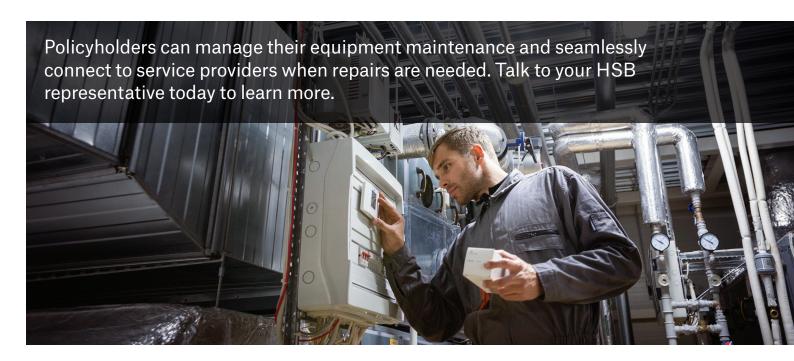

Fortunately, there's a way to maintain equipment that can help policyholders:

- Save cash and time
- Increase equipment uptime and increase revenue
- Decrease energy usage
- Lengthen equipment lifespans
- Unlock time to focus on the most important work

HSB + HELIXintel

HSB has teamed up with HELIXintel to offer an easy-to-use platform that helps organizations catalogue, track, and maintain unlimited equipment, supplies, and inventory across multiple locations. It's a one-stop, centralized platform that:

- Can be accessed from any device
- Provides guidance on equipment care and rebates
- Matches particular equipment with optimized maintenance plans
- Enables organizations to buy directly from multiple OEMs
- Helps organizations easily connect with experts and authorized dealers for service or parts
