

CERTIFICATION

ISO 45001 Certification

HSB, a Munich Re company, is a technology-driven company built on a foundation of specialty insurance, engineering, and technology, all working together to drive innovation in a modern world.

ISO 45001 is an international Occupational Health and Safety (OHS) standard of practices developed by a consensus of various industry groups and international organizations. It is a simple risk-based approach that focuses on mitigating harm to employees and visitors.

Benefits

- Global recognition makes it adaptable to any regulatory environment
- ISO 45001 OHS can be implemented by all companies to improve operational efficiency and minimize risk
- ISO 45001 OHS management system has been shown to reduce workplace accidents and related costs (lost production, fines, civil and criminal penalties)
- Implementation demonstrates management's commitment to eliminate workplace accidents — key to attracting and retaining talent

Implementing

Existing ISO 9001 Quality Management and ISO 14001 Environmental Management Systems can be updated to include ISO 45001. Or, it can also be implemented as a stand-alone management system. HSB Registration Services, or other accredited certification bodies audit and certify the implementer.

Why us

Recognition

HSB Registraton Services is accredited by International Accreditation Services (IAS), an internationally recognized accreditation body through mutual recognition agreements

Responsive

HSB Registraton Services is responsive to customer needs. Audit findings are available immediately and reports are issued within two weeks

Technical expertise

HSB Registraton Services has access to experienced technical staff in various client industries

Our auditors

- Qualified auditors who are familiar with local language and customs
- Industry-specific knowledge of operations and processes for objective performance feedback
- Understanding of health and safety risks for industries like fleet management, remote workers, exposure to lethal environment, radiological hazards, and more

If your company is considering developing an ISO 45001 Occupational Health and Safety program, please contact us for details.
