Munich Re's Smart Mobility program is a simple approach to the complex issues surrounding auto risks. It delivers customized technology-driven risk management solutions (including Telematics/Fleet Management Reporting) to help mitigate our clients' auto losses and prepare for the future of mobility.

Product summary

Geotab's OBD device, combined with the reporting power behind the Geotab Dashboard and the Fleet Concierge Services of Assured Telematics, offers one of the most flexible telematics and fleet management reporting solutions in the industry.

Features and benefits

The Geotab OBD is a small-vehicle tracking device that can be used to meet a fleet's unique needs. It plugs into a vehicle's OBDII port, a quick and easy installation process that does not require a professional installer. Once installed, the OBD device provides accident detection and notification services, in-vehicle driver coaching through immediate audible feedback, and accurate engine diagnostics to identify and monitor

mechanical issues. Fleet managers benefit from analytics and reporting elements designed to fit their specific needs. Examples of insights the system provides include:

Driver performance – identifying risky driving behaviors, including: speeding, hard braking, harsh cornering or rapid acceleration, so that corrective action can be taken to maximize safety as well as fuel efficiency

Vehicle service – alerting managers to any vehicle that is not communicating with the system and identifying vehicle engine or system faults for early intervention

Vehicle theft – identifying and tracking the location of stolen vehicles, which can assist in their recovery

Operational efficiencies – monitoring vehicle mechanical issues to help reduce vehicle downtime

Expertise not required – flagging potential issues and sending them to an advisor for analysis and further action
