Connect with us

Your insurance policy entitles you to equipment inspections at no additional cost.

HSB may contact you soon to conduct an equipment inspection. There are two types of equipment inspections – Jurisdictional and Loss Prevention; and, if applicable, both may be conducted at the same time.

Inspections are conducted by our trusted and experienced in-house team of inspectors and engineers, the largest of its kind in Canada.

Jurisdictional Inspections - Why do you need one?

It's the law. And you're responsible. By law, periodic Jurisdictional Inspections of certain boilers and pressure vessels are required in some provinces in order to ensure safety. As a business owner, you are responsible for having this equipment inspected. Failure to do so can result in heavy penalties and may even lead to a shutdown of your operations.

How can we help?

As part of our service, and included in your policy:

- We will identify whether you have Jurisdictional Inspection requirements;
- We will schedule and perform boiler and pressure vessel inspections in accordance with jurisdictional requirements;
- In accordance with provincial regulations, we will provide an Inspection Report or a Certificate of Inspection to post at your facility;
- We will provide recommendations if we observe potentially hazardous conditions;
- We will recommend ways to improve equipment operation, maintenance and reliability.

Loss Prevention Inspections - Why do you need one?

To protect your business. Loss Prevention Inspections to your insured equipment, such as heating, cooling, electrical, processing, and production machinery, are designed to help you stay in business so you don't run the risk of losing revenue and customers, and of damaging your reputation. A machinery breakdown could also result in personal injury.

How can we help?

As part of our service, and included in your policy:

- We will identify the risks that could result from a breakdown of your equipment;
- We will provide recommendations if we observe potentially hazardous conditions;
- We will recommend ways to improve equipment operation, maintenance and reliability - and help reduce the chances of downtime.
