

How does Sensor Solutions by HSB™ compare?

If you're looking for ways to help prevent losses using sensors, here are reasons to consider Sensor Solutions by HSB over other sensor systems.

Sensor Solutions by HSB	Other sensor systems
 <p>Reliable and secure cellular technology Our long-range sensors use cellular technology, so they are more reliable than those using Wi-Fi. They are battery-powered and don't use your local network, helping to keep data safe.</p>	<p>Less secure Wi-Fi technology If power goes out, so do their sensors. These sensors may also introduce cyber security risk to your network.</p>
 <p>Place-and-play convenience HSB sensors are easy to install, less invasive, and less expensive.</p>	<p>May need professional installation Sensor/water shut-off devices can be expensive to monitor and need a professional plumber to install.</p>
 <p>Fewer false alarms HSB sensors run on proprietary algorithms that know when to sound an alarm and when not to. For example, the sensor will understand when you have started a regularly scheduled freezer defrosting and will therefore not falsely alert of a freezer failure.</p>	<p>Standard alerts Their sensors may not be able to distinguish between a real loss situation and a false alarm. You may also be required to set your own alarms.</p>
 <p>Data you can use You will have access to aggregate program data from all sensor users, providing insights into risks and user behaviors.</p>	<p>Data for an extra cost If they provide data at all, you will likely have to pay extra for it.</p>
 <p>Monitoring and Support Centre As a customer, you can talk to a U.S.-based team if you have questions. Plus, if your alert needs immediate attention, our team will make an outgoing call to make sure you are aware of the situation.</p>	<p>No one to talk to You may only be able to email for help.</p>
 <p>Strong, stable company HSB is a 155+ year old insurance company, and part of Munich Re, one of the world's largest reinsurers.</p>	<p>Start-ups May not be around for the long term.</p>
