

Munich Re Life US

MAPS™

MAPS™ — Machine Learning for APS — is Munich Re Life US's new tool that uses optical character recognition (OCR) and natural language processing (NLP) to read an APS. Machine learning is then used to assign an underwriting recommendation based on the information in the APS. Underwriters receive a fully searchable APS in PDF format and a recommendation for the action to be taken on the application.

MAPS™ can be used to automate decisions, triage applications by impairment, or accelerate review of an APS, resulting in improved time service.

Please contact us for more information or a demo of MAPS™ at wheretherisk@munichre.com.
