

# Munich Re US – A leader in facilitating a sustainable cyber market

In 2021, the total global economic loss due to cybercrime was estimated at ~US\$6tn. Ransomware and cyberattacks on both supply chains and critical infrastructures pose a greater threat than ever to companies and society.

Currently, there is a heightened awareness of cyber risk across all industries which has led to an increased demand for cyber insurance. At the same time, concerns around ransomware losses and systemic risk exposures have resulted in capacity constraints across the cyber market. In order to remain relevant, the (re)insurance industry must ensure a balance between offering customers attractive solutions and maintaining a high level of sustainability and profitability in the volatile cyber line of business. Munich Re US leads the way in helping move progress forward by increasing cyber resilience, improving the protection of digital business models, and contributing to a sustainable cyber market.

## Capacity

Offers superior risk transfer solutions to promote resilience, increase transparency, and foster long-term cyber market profitability.

## Systemic risk

Collaborates with clients and vendors to tackle cyber accumulation risks by clearly defining and modeling risks and insurability.

## Expertise

Leads the cyber market by a continual investment in multidisciplinary teams to help our clients understand and address their cyber exposures.

## Data

Develops innovative, datacentric solutions by capturing quality data to identify trends, model cyber risk, and share learnings with clients and partners.
