## To our shareholders

**Dr. Nikolaus von Bomhard**  
Chairman of the Board of  
Management of Munich  
Reinsurance Company

### Dear Shareholders,

Economic growth and key economic indicators such as incoming orders, business sentiment and consumer confidence stabilised further in the first quarter of 2010. It is to be hoped that this recovery is sustainable. All around the world, the economy and financial markets continue to be supported by extraordinarily expansive monetary and fiscal policy. Munich Re is monitoring this development closely, but above all we are concentrating on our core business as a risk carrier, where our financial strength was in great demand in the first few months of this year.

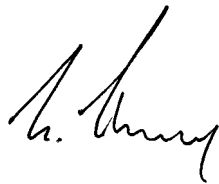

Exceptionally severe natural catastrophes occurred in the reporting period. Winter Storm Xynthia, which swept across Europe in late February, and the earthquake in Chile alone impacted Munich Re with a gross loss of almost €600m. In human terms, the major earthquake in Haiti in early January was particularly tragic; in terms of the number of victims, this was the severest in the history of North and South America. Owing to the low insurance density in Haiti, however, the impact on Munich Re was minimal. In addition, two major hailstorms hit Australia in March. In mid-April, the earth trembled again – this time in China. 2010 will thus clearly be a year with claims expenditure that is at least in line with the medium-term average and possibly even above this. Such major loss events demonstrate our importance as reinsurers and as a dependable partner for the insurance industry and those it insures. Given these heavy burdens, I am once again very satisfied with the result of €485m. In the first quarter, we were able to harvest the fruits of our investment policy of recent months, which bolstered our investment result with gains realised from a partial shift away from fixed-interest securities.

I am also satisfied with our resolve in advancing our integrated business model in the business fields of primary insurance, reinsurance and Munich Health. Since last May, our operations in health reinsurance worldwide and health primary insurance outside Germany have been unified under the Munich Health brand. The results of our newest field of business are included separately in our consolidated figures for the first time in these quarterly financial statements. Clearly, Munich Health is still in its start-up phase, which involves harmonising expansion with the consolidation of what has already been achieved. The important current consolidation also allows us to fine-tune our strategy.

The current year will without doubt still be shaped by the financial crisis and its effects. At present, the Greek debt crisis is keeping the capital markets in suspense. The joint support package agreed on by the International Monetary Fund and the euro member countries was the right decision in order to maintain the stability of the euro as a common currency. Now it is up to Greece to rigorously implement the savings and reform programme decided on. As a globally operating investor, with a very broadly diversified fixed-interest portfolio, we have also invested in Greece. But given the volume of our investment portfolio as a whole, we can absorb this risk.

Altogether, I am very optimistic for Munich Re. We are ideally positioned with our integrated business model, and our risk management has shown itself to be “storm-proof”. Our clients and shareholders have been able to depend on us at all times, even in the crisis. That is also reflected in our share price, whose performance since 1 January 2007 (i.e. before the financial crisis hit) up to the end of the first quarter of 2010 bettered the MSCI insurance index significantly. It is particularly pleasing for me that our shareholders will be able to participate directly in the success of our business. We have raised the dividend for the past year to €5.75. Munich Re shares thus have one of the strongest dividends in the DAX, making them an extremely attractive investment in view of lower interest rates. In addition, we concluded our share buy-back programme up to the Annual General Meeting on 28 April as announced. Both of these measures show that we remain a strong and reliable partner.

Yours sincerely,

A handwritten signature in black ink, appearing to read 'N. von Bomhard', written in a cursive style.

Nikolaus von Bomhard  
Chairman of the Board of Management  
of Munich Reinsurance Company

## Interim management report

### Key parameters

- Continued recovery of the global economy from severe recession, but sustainability uncertain
- Marginal price advances on the US and European stock markets
- Inflation and interest rates still low

The **global economy** continued to recover in the first quarter of 2010, as reflected in positive growth rates. Last year's monetary and fiscal policy stimuli are still playing a significant role. In addition, indicators for consumer confidence and corporate sentiment have improved worldwide. These positive signals are reinforced by further growth in the volume of world trade. In the emerging economies of Asia, consumer demand is becoming increasingly self-sustaining. Yet both the strength and durability of the economic recovery is still uncertain in many countries. For this reason, the central banks are persisting with their policy of low interest rates. There has generally been only a slight rise in inflation.

According to provisional estimates, the **US economy** grew by 3.2% in the first quarter of 2010 compared with the fourth quarter of last year. This means there was real growth for the third quarter in succession. Despite this, the unemployment rate remained at a high level of 9.7%, falling on a seasonally adjusted basis by 0.3 percentage points compared with December 2009. In seasonally adjusted terms, consumer prices rose by only 0.3% from the end of December 2009 to the end of March 2010, inflation still being subdued by restrained consumer spending.

The economic recovery in the **eurozone**, visible since the third quarter of 2009, started to falter in the fourth quarter, with GDP showing no quarter-on-quarter growth. The ifo business climate index for the eurozone rose from 91.0 points in the last quarter to 101.3 points in the first quarter of 2010. New orders in industry fell by 1.6% month on month in January, but increased again by 1.8% in February. A virtually unchanging unemployment rate and only moderately rising consumer prices underlined how fragile the economic recovery appears to be. The uncertainty has been exacerbated by the worsening of the Greek debt crisis.

In **Japan**, the economic situation stabilised further. Industrial production rose by 4.8% in the first three months of 2010, and the unemployment rate decreased from 5.2% in December 2009 to 5.0% in March 2010. In spite of this, consumer prices fell by 0.3% in the first quarter compared with December 2009.

The robust economic growth in **China** continued in the first quarter of 2010, with GDP growing in real terms by 11.9% compared with the first quarter of 2009.

In the first quarter, the US and Japanese **central banks** kept the target rates they had introduced at the end of 2009 at 0–0.25% and 0.1% respectively. The European Central Bank maintained its reference interest rate at 1.0%, to which it had been lowered in May 2009.

The **oil price** fluctuated within a range of US\$ 69.8–81.1 per barrel in the first quarter and stood at US\$ 81.0 at the end of March, about the same level as at the beginning of the quarter, but approximately 74% higher than one year before. The euro was unable to maintain its fourth-quarter level, declining from US\$ 1.43 to US\$ 1.35 at the end of March.

After a short bout of weakness, the **stock markets** in the USA and Europe continued the upward trend they had begun in March 2009. The Dow Jones closed at 10,857 points on 31 March 2010, having gained 4.1% over the quarter, while the EURO STOXX 50 almost regained its level of the fourth quarter, finishing on 2,931 points. After a temporary downward trend, the Japanese stock market was also able to recapture its previous-quarter level, the Nikkei closing the first quarter at 11,090 points, 5.2% up on the start of the year. At 31 March, yields on ten-year US and German government bonds were slightly lower than at the start of the quarter, standing at 3.83% and 3.09% respectively.

Although the indicators for consumer confidence and corporate sentiment are generally positive, the **outlook** for 2010 as a whole remains uncertain. The central question is whether the recovery will move from a state-supported to a self-sustaining phase. Rising unemployment could further weaken consumption and investment may only grow at a low rate, as production capacities lie idle. There is also the risk of the economic recovery being disrupted by an escalation of the public debt crisis, especially in Europe, by renewed destabilisation of the financial system, or by undesirable fiscal or monetary policy developments. Steeply rising oil prices cannot be ruled out either, as investments in production capacities have fallen due to the crisis. Another slump or prolonged stagnation of economic growth would harbour the risk of deflation. On the other hand, a stronger-than-expected upswing in the global economy would carry the risk of higher inflation.

## Business experience from 1 January to 31 March 2010

### Overview

Munich Re's Group-wide business performed satisfactorily in the first quarter of 2010. Gross premium income amounted to €11.7bn (10.4bn), an increase of 12.4%. We recorded an operating result of €770m (736m) for the first three months. The consolidated result for January to March showed a year-on-year rise of 11.0% to €485m (437m). Including the income and expense recognised directly in equity, there was an improvement of €0.9bn compared with the same period last year (see table on page 30). The investment result benefited from the positive development of the markets, rising significantly to €2.5bn or by 80.0% compared with the first quarter of 2009. This represents an annualised return of 5.2% on the average investment portfolio at market values. The annualised return on risk-adjusted capital (RORAC) totalled 10.7%, whilst the return on equity (RoE) amounted to 8.5%.

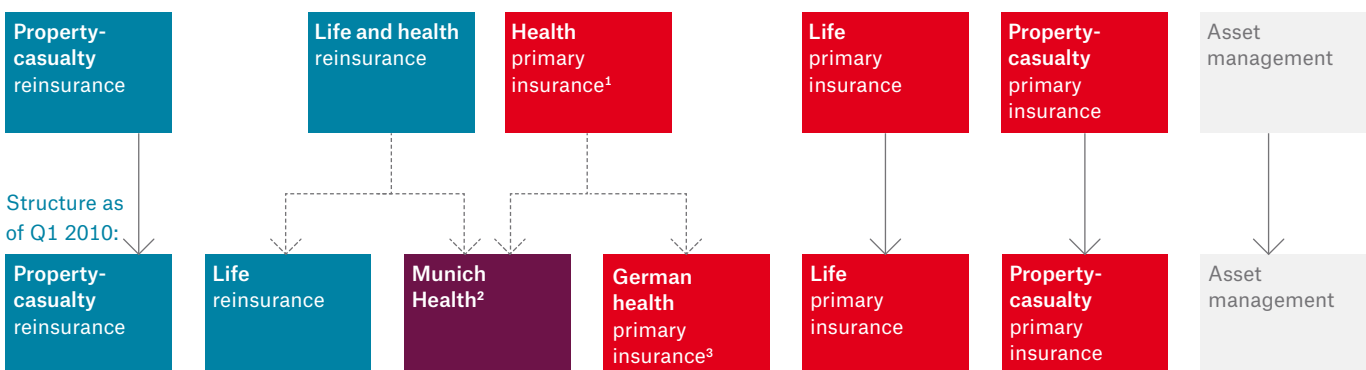

Our 2009/2010 share buy-back programme, which ran until the Annual General Meeting on 28 April 2010 and had a volume of €1bn, was concluded as planned on 21 April 2010.

### Changes regarding segmentation and the division of investment results between segments

As from this year, the business field of Munich Health, which covers our health reinsurance business worldwide and our health primary insurance outside Germany, is being shown for the first time as a separate segment. Munich Health's business was previously disclosed in the segments "life and health reinsurance" and "health primary insurance". Minus the business written by Munich Health, the segment "life and health reinsurance" has become simply "life reinsurance". The health primary insurance segment continues to include our German health insurance business and our travel insurance business. We have adjusted the figures for the previous year accordingly.

### Changed segmentation

Structure up to Q4 2009:

<sup>1</sup> German and international health primary insurance business.

<sup>2</sup> Health reinsurance business worldwide and health primary insurance business outside Germany.

<sup>3</sup> Health primary insurance business in Germany and travel insurance business.

Munich Health has a broad range of service providers and risk carriers, extending from pure reinsurers and traditional primary insurers to full-range providers of integrated insurance and healthcare services.

The following table shows the subsidiaries previously included under reinsurance or primary insurance that have been allocated to the business field of Munich Health as from this year.

---

### Munich Health at a glance

---

#### Reinsurance

#### Companies that were managed from within reinsurance and are fully allocated to Munich Health

Munich Health Holding AG, Munich  
 MedNet Holding GmbH, Munich  
 DKV Salute S.p.A., Milan  
 DKV Globality S.A., Luxembourg  
 Sterling Life Insurance Company, Bellingham, Washington  
 Olympic Health Management Systems, Inc., Bellingham, Washington  
 Olympic Health Management Services Inc., Bellingham, Washington  
 Munich Health North America, Inc., Wilmington, Delaware  
 Munich Re America Stop Loss Inc., Andover, Massachusetts  
 Excess Reinsurance, Inc., Providenciales

---

#### Companies that operate in more than one segment and are allocated proportionately to Munich Health

Munich Reinsurance Company, Munich  
 New Reinsurance Company, Geneva  
 Great Lakes Reinsurance (UK) Plc., London  
 Munich Re of Malta p.l.c., Floriana  
 Munich Reinsurance America, Inc., Wilmington, Delaware  
 American Alternative Insurance Corporation, Wilmington, Delaware

 Marina Salud S.A., Alicante  
 ERGO Generales Seguros y Reaseguros, S.A., Madrid  
 ERGO Vida Seguros y Reaseguros, Sociedad Anónima, Saragossa

---

The assets we hold to cover our technical provisions and other liabilities are not managed separately by field of business. This means that for our reinsurance companies which conduct life, health and property-casualty reinsurance, we have to divide up investment results and investment portfolios that cannot be directly allocated to a particular segment. In those cases where, as reinsurers, we post technical provisions with our clients to collateralise our obligations, the original amounts of the resulting deposits retained and associated interest income are naturally allocated precisely to the respective segment. The same applies to the portfolios and investment income from reinsurance covers for unit-linked annuity insurance with variable guarantees ("GMxB"). For all other portfolios and investment income, we undertake what is inevitably an imprecise division based on an allocation key. We have refined the method employed for this. Up to 2009, with the exception of Munich Reinsurance Company, we divided investment portfolios and investment results on the basis of the amount of the technical provisions. For the division of Munich Reinsurance Company's investment result, certain result components were allocated to the segments directly and then the remainder according to premium volume. As of 2010, we are allocating investment result and investment portfolio according to a key based on the technical provisions. Compared with the previous method, the new approach gives rise to significant result shifts in favour of property-casualty reinsurance.

## Reinsurance

- Treaty renewals at 1 January 2010: Consistent profit orientation at the expense of volume
- High combined ratio of 109.2% due to cost burden from major losses
- Investment result of €0.9bn
- Result of €0.4bn

Key reinsurance figures <sup>1</sup>		Q1 2010	Q1 2009
Gross premiums written	€bn	5.9	5.4
Loss ratio property-casualty	%	81.0	68.5
Expense ratio property-casualty	%	28.2	28.8
Combined ratio property-casualty	%	109.2	97.3
Thereof natural catastrophes	Percentage points	20.8	5.6
Technical result	€m	108	320
Investment result	€m	935	875
Operating result	€m	605	857
Consolidated result	€m	424	678
		31.3.2010	31.12.2009
Investments	€bn	79.7	76.8
Net technical provisions	€bn	56.3	53.4

<sup>1</sup> Previous year's figures adjusted owing to first-time recognition of Munich Health as a separate segment (see "Recognition and measurement") and to IFRS 3.62 and IAS 8.

### Gross premiums by division Q1 2010

Life	31% (25%)
Global Clients and North America	26% (28%)
Europe and Latin America	16% (18%)
Special and Financial Risks	15% (14%)
Germany, Asia Pacific and Africa	12% (15%)

The overall performance of reinsurance business in the first quarter of 2010 was satisfactory, as evidenced by the **consolidated result** of €424m (678m). The operating result decreased to €605m (857m), mainly due to the greater year-on-year burden from major losses, particularly the strong earthquake in Chile, the hailstorms in Australia and Winter Storm Xynthia, each of which had a distinctly negative impact on our result. By contrast, our investment result was good, largely owing to the realisation of gains on the disposal of fixed-interest securities, a product of our successful investment strategy in past months, with temporarily high volumes invested in corporate bonds.

Compared with the same quarter last year, **premium volume** climbed significantly by 9.7% to €5.9bn (5.4bn). Part of this increase was attributable to the gross premiums written by the Hartford Steam Boiler Group (HSB Group) acquired by Munich Re as at 31 March 2009. The euro fell against most other important currencies in the first quarter of 2010 compared with the same period last year. Without currency translation effects, premium income therefore would have been €71m lower, increasing by an overall 8.4% year on year.

In the **life** reinsurance segment, our premium income grew robustly by 35.7% to €1.8bn (1.4bn), essentially because we had concluded a number of large-volume quota share treaties during the first quarter of 2009, which have been recognised in the income statement since the second quarter of 2009. If exchange rates had remained the same, premium would have shown an increase of 29.8%. Owing to the economic recovery, demand for reinsurance as a capital substitute weakened in the first quarter of 2010 compared with 2009.

In **property-casualty reinsurance**, our premium volume rose only marginally by 1.0% to €4.1bn (4.0bn) on account of our acquisition of the HSB Group in 2009. A counterbalancing effect derived from our active cycle management in the form of shifts within the portfolio and our willingness to jettison unprofitable business. Without currency translation effects, premium income would have climbed by 1.2% compared with the same quarter last year. Around one-third of our business is generated via brokers, the predominant form of acquisition above all in the Anglo-American sphere.

At 1 January 2010, about three-quarters of Munich Re's global property-casualty reinsurance treaty business was up for **renewal**, involving a premium volume of approximately €7.9bn. As expected, the market environment was more difficult than in the previous year. The capital markets had recovered more quickly than anticipated, as had the balance sheets of many insurers and reinsurers. There was sufficient capacity available in most lines of business. Generally, prices showed a slight downward trend, also because the demand for insurance and reinsurance covers stagnated owing to the difficult economic environment. Marine business and the engineering classes were particularly hard hit by recession-related declines in prices and volume. All in all, we renewed treaties with a volume of around €6.8bn (85.4%), while 14.6% (around €1.2bn) were terminated in order to maintain our profitability. We were in part able to offset these terminations by means of new business with a volume of around €0.7bn. Altogether, the volume of renewed business fell by 6.7% (around €530m) to approximately €7.4bn year on year. The price level and hence profitability of the renewed portfolio remained gratifyingly stable (-0.3%) compared with the previous year, because Munich Re resolutely adhered to its profit-oriented underwriting policy and was prepared to dispense with unprofitable business where necessary.

The **combined ratio** for the first three months amounted to 109.2% (97.3%) of net earned premiums. At €761m (285m), the total burden from major losses was far higher than the projected amount and the multi-year average, representing 22.8% (8.6%) of net earned premiums, with 20.8 (5.6) percentage points attributable to natural catastrophes. In terms of the market cycle as a whole, a large part of the average annual expenditure for natural catastrophes thus occurred in the first quarter of the current financial year. Natural catastrophe covers are nevertheless among Munich Re's most profitable lines of business. We took account of the generally growing hazard potential and achieved annual price increases of 2-3% on average over the past years. For Xynthia, a typical winter storm that caused significant damage in Europe on 27 and 28 February, we paid and reserved some €70m. In addition, we established provisions of around €160m for the two hailstorms that occurred in Australia this March. Besides these claims burdens from natural catastrophes, the largest individual loss in the period under review was the devastating earthquake in Chile on 27 February, giving rise to expenditure of around €500m in the first quarter of 2010. Our original projection for these losses was approximately 20% lower. Given the high commercial and industrial insurance penetration in Chile, however, the loss amount incurred is expectedly high. The significant share of production facilities and buildings reinsured individually (facultative business) makes a reliable forecast of the overall burden difficult. Nevertheless, further increases in expenditure among insurers and reinsurers in general need not necessarily lead to a proportional increase of our loss burden. From the severe earthquake in Haiti, we anticipate a comparatively small loss burden in the single-digit to low double-digit million US dollar range, since far less insurance is purchased for people and buildings in countries like Haiti than in industrial nations.

## Primary insurance

- Total premium growth to €5.1bn; increase in German and international business
- Combined ratio impacted by harsh winter (98.7%)
- Investment result of €1.6bn
- Result of €165m

<b>Key primary insurance figures</b>		Q1 2010	Q1 2009
Total premium income	€bn	5.1	4.8
Gross premiums written	€bn	4.7	4.5
Loss ratio property-casualty	%	64.3	61.7
Expense ratio property-casualty	%	34.4	34.6
Combined ratio property-casualty	%	98.7	96.3
Technical result	€m	51	244
Investment result	€m	1,622	726
Operating result	€m	251	63
Consolidated result	€m	165	-59
Thereof attributable to minority interests	€m	5	-6

		31.3.2010	31.12.2009
Investments	€bn	120.7	118.4
Net technical provisions	€bn	109.9	107.7

Munich Re's primary insurance segment comprises all the activities of the ERGO Insurance Group (ERGO), with the exception of health insurance business outside Germany and handled by Munich Health.

In the first quarter of 2010, ERGO was able to confirm the upward trend initiated in the second quarter of 2009. In the previous year, its results had still been impacted by the financial crisis. In the primary insurance segment, we achieved an operating result of €251m (63m) and a consolidated result after tax of €165m (-59m) in the quarter under review. From an underwriting perspective, the first quarter of 2010 was again good, although our claims expenditure in property-casualty insurance was significantly higher year on year owing to the long, harsh winter and Winter Storm Xynthia. The combined ratio in the property-casualty segment (including legal expenses insurance) amounted to 98.7% (96.3%) and was thus above the previous year's level. A major reason for the increased result compared with the same period last year was our good investment result, which rose by 123.4%. The previous year's figure had additionally been impacted by impairment losses of goodwill.

**Overall premium volume** across all lines of business increased by 7.3% to a total of €5.1bn (4.8bn), with growth especially apparent in international business, where – in contrast to the same quarter of the previous year – positive developments in exchange rates made themselves felt in important international markets such as Poland and Turkey. **Gross premiums written** rose to €4.7bn (4.5bn). Not included in this figure are the savings premiums of unit-linked life insurance and capitalisation products.

### Gross premiums by class of business Q1 2010

● Health	30% (30%)
● Life	33% (34%)
● Property-casualty	37% (36%)

In the first quarter of 2010, the total premium income of our **life insurers** amounted to €2.0bn (1.8bn), a increase of 9.0% attributable to both German and international business. German new business was higher than in the same quarter last year (25.8%), thanks to the favourable performance of single-premium business. In this area, we posted double-digit growth rates, especially in traditional annuity covers. In terms of the annual premium equivalent (APE)<sup>1</sup> – the customary international performance measure – our new business volume totalled €117m (116m) and was thus a marginal 0.9% above that of the same period last year. Given the current economic environment, clients are still shying away from concluding long-term contracts with regular premium payments, as typically employed for old-age provision. From the marketing perspective, especially the business placed via our banking cooperation showed much better sales figures than in the same quarter last year. We were also able to record robust expansion through our tied agents. In international business, premiums climbed by 25.0% to €535m (428m), and we achieved good growth of 303.5% and 28.6% in Poland and Belgium respectively. The very gratifying increase in Poland is mainly attributable to our new bank cooperations with Alior and PKO Bank.

In the **German health** insurance segment, premium income in the first three months of 2010 climbed by 5.7% to €1.4bn (1.3bn). Business with supplementary benefit covers grew by 5.1%, while premium income in comprehensive health insurance expanded significantly by 7.2%, reflecting the marked price increases we were obliged to make at the beginning of 2010 owing to the general rise in medical costs. The conclusion of a major contract also had a positive effect on premium growth in comprehensive cover. We had to take a cut in new business acquired, which was down 23.6% on the same period last year. In 2009, many clients took out private insurance coverage at the conditions applying prior to the entry into force of major changes related to the health reform. In the period between January and March 2010, we posted an 8.7% increase in premium income in travel insurance. After a difficult 2009, we consider this to be a sign that the travel sector is gradually recovering.

The **property-casualty insurance** segment showed an increase in premium income to €1.7bn (1.6bn) in the first three months of the year. The improvement of 6.7% was largely attributable to international business. In Greece, we grew our premium income by 44.3% thanks to our exclusive partnership with Piraeus Bank. Premium expansion was also strong in Poland (+29.0%) and South Korea (+29.5%), reflecting favourable developments in exchange rates and double-digit organic growth. In Germany, we registered a rise in premium income of 2.5% to €1.2bn (1.1bn) in the same period. This development was largely driven by commercial and industrial business, where we posted 4.8% growth in premium. Our business with personal accident policies also showed a satisfying rise (+2.3%), while personal lines business as a whole essentially remained stable.

At 98.7% of net earned premiums, the **combined ratio** was good, albeit higher than in the same quarter last year (96.3%). Natural hazard events such as Winter Storm Xynthia and the long, harsh winter – also outside Germany – burdened the loss ratio for the first three months of 2010. For German business, the loss ratio rose to 58.7% (57.3%) in the first quarter of 2010, while for international business it increased to 73.2% (69.2%).

<sup>1</sup> APE = Total regular premium income and one-tenth of single-premium volume.

## Munich Health

- Marked increase in premium volume by 62.8% in the period from January to March
- Combined ratio of 101.3% influenced by start-up costs of new subsidiaries
- Result of -€11m

<b>Key Munich Health figures</b>		Q1 2010	Q1 2009
Gross premiums written	€bn	1.3	0.8

		31.3.2010	31.12.2009
Investments	€bn	3.5	3.1
Net technical provisions	€bn	2.9	2.9

<sup>1</sup> Excluding health insurance conducted like life insurance.

In 2006, Munich Re brought together its international health reinsurance and health primary insurance outside Germany in a separate business field, which has been operating since May 2009 under the Munich Health brand. We have pooled our Group-wide health market activities (except health primary insurance in Germany) in this field, thus covering the health-business value chain from insurance to healthcare provision. From January 2010 onwards, we show health business (except health primary insurance in Germany) as a separate business segment in accordance with IFRS 8. The cornerstones of Munich Health are the international subsidiaries of our health primary insurer DKV, the specialised US health insurer Sterling Life Insurance, Munich Re's worldwide health reinsurance business, and the service companies of the MedNet Group.

Munich Health's **gross premiums written** showed strong growth in the first quarter, owing to the conclusion of major treaties to provide our clients with capital relief due to the financial crisis, while the operating result remained constant at €4m (3m). The consolidated result amounted to -€11m (-4m) in the first quarter.

**Gross premiums by market region  
Q1 2010**

● Northern/Eastern/ Central Europe (NECE)	25% (29%)
● North America (NA)	48% (35%)
● Asia/Pacific (APAC)	7% (3%)
● Middle East/ Africa (MEA)	3% (9%)
● Southern Europe/ Latin America (SELA)	17% (24%)

In the first quarter, **premium income** improved appreciably by 62.8% compared with the same period last year, rising to €1.3bn (0.8bn). International health primary insurance business showed a moderate increase of 5.7% to €504m (477m), with premium growth particularly in Spain and Belgium. Sterling Life's premium income was down because the US regulatory framework has been tightened for the senior segment on which it focuses: premium income is coming under pressure from sales restrictions and costs are rising on account of increasing requirements placed on contracts with providers. The growth in reinsurance premium income by 156.2% to €748m (292m) is essentially due to the conclusion of new, large-volume quota share treaties in North America and Asia. If exchange rates had remained the same, premium volume would have been 58.4% higher than in the first three months of 2009.

The **combined ratio** for the period from January to March 2010 was 101.3% (100.5%). This key indicator relates only to short-term health business, and not to business conducted like life insurance. The latter amounted to 10.4% (15.6%) of gross premiums written in the first quarter. The relatively high combined ratio is mainly attributable to start-up costs for our young subsidiaries DKV Salute, Italy, DKV Globality, Luxembourg, und Marina Salud, Spain, the increased figure being reflected in a decline of €10m to -€5m in the technical result for the period from January to March 2010.

## Investment performance

- Cautious expansion of our economic equity exposure to 3.1%
- At 85%, proportion of investments in fixed-interest securities and loans remains a determining factor
- Investment result of €2.5bn up significantly on the crisis-induced low level of the previous year

Under our asset-liability management approach, our **investment strategy** is geared to the structure of our liabilities. The characteristics of the payment obligations from insurance business, including their dependence on economic factors such as interest rates, currency and inflation, thus determine the investments selected. This cushions our assets somewhat against the effects of capital market fluctuations. Our investment policy also considers the special features of the reinsurance, primary insurance and Munich Health business segments. The particularly long-tailed underwriting liabilities of our life primary insurers are reflected in the corresponding maturity structure of the related investments. Where possible, these investments are made in instruments that can be posted as loans so as to avoid fluctuations in carrying amounts due to interest rate changes.

In the period under review, we built up our equity portfolio via selective reallocations from corporate bonds. The gains on disposals thus realised and the improved net balance of write-ups and write-downs contributed significantly to the 80.0% increase in the investment result. The return on investment improved accordingly to 5.2% (3.1%).

As at the reporting date, the most important share price indices closed at almost the beginning-of-year levels, despite having slumped (markedly in some cases) in the middle of the first quarter. Risk spreads were also largely at the same level as at the beginning of January, whereas a fall in interest rates, especially for German government bonds, was apparent.

Despite a shift away from fixed-interest securities to real assets, primarily equities, **fixed-interest securities and loans** made up €159bn (157bn) or approximately 85% of our total investments at carrying amounts at the end of the quarter. Besides foreign-currency exchange gains, this slight increase was also due to the interest-rate trend, which led to our net unrealised gains moving up €1.0bn to €5.7bn. Furthermore, our loans recognised at amortised cost showed valuation reserves of €2.4bn, an increase of €1.1bn.

<sup>1</sup> Including owner-occupied property.

A good 45% of our fixed-interest securities and loans, including short-term items, are in government bonds or instruments for which public institutions are liable. Some 16% of this is in bonds from Portuguese, Italian, Irish, Greek and Spanish issuers; 33% is apportionable to German issuers and 15% to US issuers. Additionally, approximately 28% of our portfolio of interest-bearing investments is in securities and debt instruments with top-quality collateralisation, mainly German pfandbriefs.

Following the above-mentioned reallocation, corporate bonds accounted for only 9% of our portfolio of fixed-interest investments as at the reporting date. Our portfolio of asset- and mortgage-backed securities, which are held chiefly by our reinsurance companies, expanded somewhat due largely to exchange- and interest-rate developments, increasing by €0.1bn to €5.4bn (5.3bn) – despite disposals. Around 87% of these securities have an AAA rating

Approximately 12% of our portfolio of fixed-interest securities and loans, which includes short-term items, was invested with banks at the reporting date. A small portion of our bank exposure, around 3%, consists of dormant holdings, participation certificates and other quasi-equity instruments. For these securities in particular, further write-downs cannot be ruled out. Another 6% of our bank exposure is in subordinated bonds with limited maturities.

We hold bonds with a volume of approximately €7.4bn (7.8bn) as protection against the risks of future inflation and the rise in interest rates typically associated with this.

The reallocation of investments to equities during the period under review led to our [equity portfolio](#) (including investments in affiliated companies and associates) growing to €7.5bn (5.2bn). As at the reporting date, our economic equity exposure after hedging was 3.1% (2.8%).

**Regular investment income** rose, due especially to the larger portfolio of investments compared with the previous year and to careful investing in credit-exposed securities. In addition, there was an increase in income from associates.

In the first three months of the financial year, the net balance of **write-ups and write-downs** on our investments was -€93m (-543m). We made minor write-downs of only €10m (234m) on the swaptions used by our life primary insurers as protection against reinvestment risks in low-interest-rate phases. Given the favourable stock market performance at the end of the quarter, we made write-downs of only €11m (268m) on our equity portfolio. By contrast, in the previous year, prices had reached their lowest point towards the end of the first quarter and led to correspondingly high write-downs.

We made no write-downs on our fixed-interest securities and loans in the reporting period, compared with write-downs of €103m in the same period last year.

In the period under review, we again posted good net **realised gains on disposal** of €655m (359m). However, we do not anticipate that we can maintain this level in the quarters to come. We realised net gains on disposal of €551m (-89m) in our portfolio of fixed-interest securities available for sale, including gains on corporate bonds. In so doing, we benefited from our 2009 investment strategy of investing more strongly in corporate bonds, which subsequently record market-value gains as risk spreads fall. In the second half of 2009, we had already hedged some of these bonds against the risk of falling market values as a result of rising risk spreads.

Furthermore, we achieved a net result of €8m (408m) in the first quarter on the disposal of non-fixed-interest securities categorised as “available for sale” and of derivatives with non-fixed-interest underlying business.

In the period under review, we generated a result of €147m (–42m) from investments for the benefit of life insurance policyholders who bear the investment risk. We post this figure in the investment result under “other income/expenses”.

<b>Assets under management for third parties</b>		31.3.2010	31.12.2009

		Q1 2010	Q1 2009
Group asset management result	€m	12	8

MEAG MUNICH ERGO AssetManagement GmbH is Munich Re’s asset manager. In addition to its function as asset manager for the Group, MEAG also offers its expertise to private and institutional clients. The monies managed by MEAG in private-client business via investment funds totalled €2.0bn (2.0bn).

MEAG’s assets under management for institutional clients outside the Group rose to €6.2bn (5.9bn). The consolidated asset management result increased to €12m (8m). The assets managed by PICC Asset Management Company Ltd. (PAMC), Shanghai, 81% of which belongs to PICC People’s Insurance Company of China, and 19% to MEAG, reached €23.3bn (18.8bn).

## Prospects

- Challenges for the Group owing to difficult economic environment, but also opportunities thanks to financial strength and know-how
- Sharpened positioning in reinsurance; ERGO to drive profitability with its new brand strategy
- Premium income in the range of €43–45bn expected
- Consolidated result target of over €2bn, albeit increasingly ambitious

There are various reasons why the quarterly results of insurance companies, including Munich Re, are not a suitable indicator for the results of the financial year as a whole. Losses from natural catastrophes and other major losses have a disproportionate impact on the result of the reporting period in which they randomly and unforeseeably occur. Late-reported claims for major loss events can also lead to substantial fluctuations in individual quarterly results. Finally, gains and losses on the disposal of investments, dividends and write-downs of investments do not follow a regular pattern. Consequently, our quarterly figures do not provide more than pointers to the result for the year that may be expected.

### Overview

The global economic recession seems to have bottomed out, although there is still uncertainty regarding the durability of the recovery and future prospects. Even if the downturn has come to an end, it will take a long time for economic performance to return to its pre-crisis level, for companies to again invest more and also insure these investments, and for consumers to spend a greater share of their income on private provision. Despite the difficult economic situation, there are many opportunities for us.

### Reinsurance

Reinsurance continues to hold considerable promise for the future. We have responded to a shift in demand trends by repositioning ourselves in reinsurance. Even more so than in the past, Munich Re will offer its cedants specialist consulting services and solutions also for issues such as balance-sheet management, risk modelling or asset-liability management – wherever possible via customised insurance covers. For new and complex risks, we devise innovative coverage concepts that go beyond traditional reinsurance.

**Life reinsurance** offers good growth potential. We expect continuing demand for large-volume quote share treaties, albeit on a more limited scale than in 2009. Growth impulses will derive from the implementation of European supervisory rules (Solvency II), a revived privatisation trend in provision for old age, long-term care and disability in the developed markets, the need for asset protection, and the dynamic expansion of the Asian life insurance markets. Especially in Asia, we aim to take greater account of the regional conditions by means of specially developed insurance products, thereby expanding our business. Our gross premiums written should reach a volume of €7–8bn in 2010.

We are adhering to our objective of doubling the value added by new business in the period 2006 to 2011. On the basis of Market Consistent Embedded Value (MCEV) Principles, this objective corresponds to a value added by new business of €330m for the year 2011. Given the good results of recent years, we are at present confident of being able to continue surpassing this goal in future.

In **property-casualty reinsurance**, which historically moves in cycles, Munich Re will maintain its clear, profit-oriented underwriting policy and accept risks only at commensurate prices, terms and conditions. The renewals at 1 January 2010 therefore resulted in a net reduction in premium volume of some €530m (-6.7%).

With a volume of approximately €1.1bn, **renewals at 1 April 2010** involved just under 10% of the total treaty business to be renewed, 35% of which concerned the markets of Japan and Korea and almost 40% North America and global clients. Overall, a continuation of the trend from the January renewals was observed. Markets moved sideways at best, with a slight downward tendency. Only through its consistent underwriting policy was Munich Re able to buck the trend and maintain the quality of its portfolio. This required a withdrawal from unprofitable business. The volume of business was nevertheless maintained at around the same level as in the previous year – thanks to the expansion of existing profitable client relationships and growth in the strongly know-how-driven segment of complex liability risks.

For the renewals at 1 July 2010 (parts of the US market, Australia and Latin America), markets should generally continue to move sideways, with the exception – as was already the case in the January renewals – of those with recent claims experience. For Australia, we reckon with significant price increases, given the accumulation and size of weather-related losses in the last few years and first quarter of 2010. Similarly, the earthquake in Chile is likely to have a positive impact on prices in the renewals in Latin America. We also anticipate higher rates for covering offshore risks, e.g. oil rigs. In the medium to long term, Munich Re will benefit from the constantly growing accumulation hazards and related strong demand for effective capital relief. Thanks to its professionalism and expertise, Munich Re is well positioned to make the most of these opportunities. In the short term, however, the weakness of the economy will continue to have a curbing effect on demand.

For 2010, we project gross premiums written of around €15bn in property-casualty reinsurance, where Munich Re's expectation is a combined ratio of around 97% of net earned premiums over the market cycle as a whole. The latter figure is likely to be exceeded in 2010, however, since our long-term estimate is based on an average major-loss burden of 6.5% from natural catastrophes. The first quarter of 2010, however, was already affected by very severe accumulation loss events, whose costs of around €700m alone accounted for about five percentage points of the loss ratio. The month of April saw further major losses, in particular in connection with the sinking of the oil rig in the Gulf of Mexico, which will impact Munich Re with a material-damage loss of around €60m. The assessment of the liability covers is highly complex; the covers potentially exposed are limited. Overall, our claims burden from this event will amount to a low triple-digit million euro amount at most. We will therefore only be able to achieve a combined ratio of 97% in 2010 if random major losses in the coming months remain significantly below our expectations.

We anticipate that **gross premiums** in reinsurance (excluding Munich Health) will range between €22bn and €23bn in 2010, provided that exchange rates remain more or less constant and the cyclical losses in premium income for primary insurers and their impact on reinsurance covers keep within reasonable bounds or can be offset by additional business. We thus essentially confirm the premium forecasts we made for the reinsurance segment, minus the health reinsurance business now included in Munich Health.

With only one quarter of the year elapsed, the consolidated result in reinsurance is subject to considerable uncertainty as far as major losses and capital-market developments are concerned.

### Primary insurance

Last year, ERGO decided to revise its brand strategy with the aim of gearing itself even more strongly to the needs of its clients and winning new ones in order to generate better profitability. In future, ERGO will therefore also market life and property-casualty insurance policies in Germany under the ERGO brand. The brands Victoria and Hamburg-Mannheimer are to be withdrawn from the market. The renaming of KarstadtQuelle Versicherungen, which is now called ERGO Direkt Versicherungen, was completed in the first quarter of 2010. All other changes will be implemented in the further course of the year. ERGO is keeping the brands of its specialist insurers D.A.S. (legal expenses insurance), DKV (health insurance), and ERV (travel insurance). They are leaders in their fields and have numerous partnership agreements in and outside Germany, for which the special brands are important.

We expect that premium development will continue to vary between the segments. All in all, the positive trend of the previous year should continue in 2010.

In **life insurance**, our total premium income should be somewhat below the previous year's level, i.e. just under €8bn, while gross premiums written should total a good €6bn. We anticipate that there will be a moderate decline in premium revenue, since we do not expect to post the same high level of single-premium income as in 2009. We are proceeding on the assumption that premium income generated by German business will remain more or less constant. Our German new business should show a slight increase in 2010 – a trend that will be due partly to the good performance of capital-market-based products and company pension business.

In the **German health insurance** segment, we are aiming for an increase in premium income to a good €5bn. We should be able to achieve premium growth especially in comprehensive health insurance, where we raised prices significantly at the beginning of 2010 owing to the general rise in healthcare costs.

In **property-casualty insurance**, we anticipate slight premium growth to over €5bn, deriving from both German and international business. In Germany, premium volume should show an increase even though market premium as a whole is likely to decline marginally. Despite Winter Storm Xynthia and the long and harsh winter, which led to a combined ratio of 98.7% in the first quarter, we expect the ratio to remain within our target of below 95% for the year as a whole.

The **total premium income** written by our primary insurers (excluding Munich Health) should reach between €18bn and €19bn for 2010, thus exceeding last year's figure (€18.1bn). We project that **gross premiums written** will range between €17bn and €18bn (previous year: €16.6bn, excluding health primary insurance outside Germany). As previously explained, health primary insurance business outside Germany is no longer shown in the primary insurance segment as it was at the end of the financial year 2009, but is now included in Munich Health.

The **consolidated result** for the primary insurance segment is likely to continue developing positively this year. For the ERGO sub-group, we expect a result of €350–450m (previous year: €173m).

### **Munich Health**

The international healthcare markets offer a host of long-term growth opportunities, particularly thanks to advances in medicine and increases in life expectancy. We intend to take full advantage of these opportunities.

We are focusing on the sustained profitability of the segment and on business models that are attractive in the long term in the countries in which we operate. To this end, for instance, we will apply the successful business model of our minority interest in DAMAN to neighbouring regions. We constantly subject our existing portfolio to critical scrutiny in order to improve its earnings strength.

The gross premiums written by Munich Health, comprising the premium for health insurance outside Germany and worldwide health reinsurance business, are likely to be a little over €4.5bn in 2010.

We are expecting the positive result contribution from this young field of business to be only low, owing to the start-up investments in several units.

Opportunities and risks will derive for our reinsurance business and for our health insurance subsidiary Sterling from the US healthcare reform adopted by Congress on 21 March 2010. We will analyse the implications of this legislation in detail and design our strategy and business models in the US market accordingly.

### **Munich Re (Group)**

If exchange rates remain similar to the average values of the first quarter, we expect that the Group's **gross premiums written** will be in the range of €43-45bn (total consolidated premium).

For the current year, we project a return on **investments** (RoI) of under 4%, despite the high gains in the first quarter of the year. We do not consider a significant increase in capital-market interest rates to be likely in 2010. This will also be reflected in a correspondingly lower return on our new investments in interest-bearing instruments. We thus expect regular income from our portfolio of interest-bearing investments to be comparatively reduced in 2010. We do not expect further gains on disposals from our interest-bearing assets, but we must reckon with moderate burdens from losses on disposals and write-downs. Given our relatively low equity-backing ratio, which we are increasing over time but not to past levels, our exposure to share-related impairments is marginal, as are the opportunities to realise capital gains. From today's standpoint, we therefore consider it likely that investment results for the coming years will be lower than in previous years and in the first quarter of 2010, with a more pronounced decrease for reinsurance business. Even if economic and early indicators are slowly stabilising and the capital markets have recovered, further economic burdens on the result cannot be ruled out. Since we essentially aim to maintain the relatively moderate risk profile of our investments, we should be well protected against extreme losses.

We are adhering to our long-term objective of a 15% return on our risk-based capital (**RORAC**) after tax across the cycle. However, this target will be difficult to achieve given the currently low level of interest rates.

We are aiming for a **consolidated result** of over €2bn for 2010. Despite the burdens from the earthquake in Chile and the many other major losses, this target remains achievable, albeit very ambitious. For 2011 we anticipate an increase in results.

In the first quarter of 2010, we continued with our **share buy-back programme**. By the Annual General Meeting on 28 April, a total of 8.9 million Munich Re shares worth €1bn had been repurchased and retired as part of the share buy-back programme 2009/2010. We intend to make further share buy-backs of up to €1bn for the twelve-month period from May 2010 to April 2011, depending on the market conditions, capital market environment and further development of the Group parent company's revenue reserves under German commercial law.

The statements relating to opportunities and risks as presented in the Munich Re Group's Annual Report 2009 apply unchanged.

## Interim consolidated financial statements

### Consolidated balance sheet as at 31 March 2010<sup>1</sup>

## Selected notes to the consolidated financial statements

### Recognition and measurement

This quarterly report as at 31 March 2010 has been prepared in accordance with International Financial Reporting Standards (IFRSs) as applicable in the European Union. The condensed interim consolidated financial statements are prepared in accordance with IAS 34, Interim Financial Reporting. We have complied with all new and amended IFRSs and IFRIC interpretations whose application is compulsory for the first time for periods beginning on 1 January 2010.

The following new or revised standards are of significance:

The revision of [IFRS 3 \(rev. 01/2008\), Business Combinations](#), and [IAS 27 \(rev. 01/2008\), Consolidated and Separate Financial Statements](#), mainly involves changes in the balance sheet recognition of non-controlling interests, successive share purchases, acquisition-related costs and contingent consideration. In addition, there have been amendments to the rules for the treatment of changes in ownership interests with and without loss of control. This has resulted in a knock-on change to IAS 28, Investments in Associates. Effects of the new rules for Munich Re will, owing to their prospective application, result only for future acquisitions or sales of shareholdings and will be dependent on the conditions of the respective transaction.

The change in [IAS 39 \(rev. 07/2008\), Financial Instruments: Recognition and Measurement, Eligible Hedged Items](#), provides guidance on designating a portion of cash flows or a risk as a "hedged item" and the extent to which inflation risks may be designated "hedged items". The new rules have had no impact for Munich Re.

The change to [IFRS 2 \(rev. 06/2009\), Share-based Payment](#), clarifies the recognition of cash-settled share-based payment transactions. The new rules mainly concern the question of how individual subsidiaries in a group are to recognise (cash-settled) share-based payment agreements in their own financial statements. Under these agreements, the subsidiary receives goods or services from employees or suppliers which the parent or another group company pays for. The new rules have had no implications for Munich Re.

The changes published as part of the IASB's Annual Improvement Process in April 2009 are also to be applied for the first time for financial years beginning on or after 1 January 2010. Involving a total of ten standards and two interpretations, they are of subordinate importance for Munich Re.

The first-time application of the interpretation IFRIC 17, Distributions of Non-cash Assets to Owners, has had no material impact.

As from this year, the business field of Munich Health, which covers our health reinsurance business worldwide and our health primary insurance outside Germany, is being shown for the first time as a separate segment. Munich Health's business was previously disclosed in the segments "life and health reinsurance" and "health primary insurance". Minus the business written by Munich Health, the segment "life and health reinsurance" has become simply "life reinsurance". The health primary insurance segment continues to include our German health insurance business and our travel insurance business.

In the Munich Health segment, too, an interest component in the form of income from technical interest is recognised in the technical result. For international primary insurance business, the income from technical interest is based on the interest allocated to the provision for future policy benefits (actuarial interest rate) and the interest

on technical provisions at the relevant national risk-free interest rate. In the case of long-term reinsurance treaties, the interest corresponds to the contractually agreed allocations of interest. For short-term reinsurance treaties, the technical interest is calculated on the basis of the risk-free interest on technical provisions at the relevant national interest rate. In addition, we have further refined the method of distributing the investment results between our segments. The figures for the previous year have been adjusted accordingly.

Otherwise, the same principles of recognition, measurement and consolidation have been applied as in our consolidated financial statements as at 31 December 2009. In accordance with IAS 34.41, greater use is made of estimation methods and planning data in preparing our quarterly figures than in our annual financial reporting. Taxes on income in Munich Re's quarterly financial statements are calculated in the same way as for the consolidated financial statements as at 31 December 2009, i.e. a direct tax calculation is made per quarterly result of the individual consolidated companies.

### Foreign currency translation

Munich Re's presentation currency is the euro (€). The following table shows the exchange rates of the most important currencies for our business:

Currency translation rates	Balance sheet		Income statement

Other operating income mainly comprises income of €94m (63m) from services rendered, interest and similar income of €36m (24m), income of €9m (20m) from the release/reduction of miscellaneous provisions and adjustments of values for receivables, and income of €37m (9m) from owner-occupied property, some of which is also leased out.

In addition to expenses of €68m (35m) for services rendered, other operating expenses chiefly include interest charges and similar expenses of €29m (38m), other write-downs of €13m (13m), and other tax of €5m (7m). They also contain expenses of €12m (7m) for owner-occupied property, some of which is also leased out.

Other non-operating expenses are expenses unrelated to the conclusion, administration or settlement of insurance contracts or the administration of investments. Besides foreign currency exchange losses of €916m (1,058m), they include write-downs of €21m (28m) on other intangible assets and other non-technical expenses of €83m (58m), such as expenses unrelated to the accounting period, project costs and other amounts that cannot be allocated elsewhere, and restructuring expenses.

### Non-current assets held for sale

As from the financial year 2010, we are presenting disposal groups only if other assets or liabilities besides the non-current asset held for sale will actually be transferred to the respective acquirer. Assets or liabilities which are associated with the transferred asset but which will not be transferred are consequently not allocated to a disposal group. This concerns, for example, certain deferred tax items and provisions for deferred premium refunds.

In the fourth quarter of 2009, with economic effect from 1 January 2010, we sold one of our owner-occupied office properties. Its carrying amount of €13m is therefore no longer recognised at the reporting date. At the same time, we acquired an office property for own use at a price of €41m.

Also in the fourth quarter of 2009, with economic effect from 1 April 2010, we sold seven residential investment properties with a total carrying amount of €68m.

Besides this, in the fourth quarter of 2009, we decided to sell an investment office property with a carrying amount of €22m. A contract regarding the sale of this property was signed in April 2010, and the transfer of ownership is likely to be concluded by 1 July 2010 at the latest.

How the non-current assets held for sale are allocated between the segments is disclosed in the segment reporting.

### Related parties

Transactions between Munich Reinsurance Company and subsidiaries that are to be deemed related parties have been eliminated in consolidation and are not disclosed in the notes. Business relations with unconsolidated subsidiaries are of subordinate importance as a whole; this also applies to business relations with associates.

No notifiable transactions were conducted between Board members and Munich Re.

### Number of staff

The number of staff employed by the Group as at 31 March 2010 totalled 24,675 (24,951) in Germany and 22,342 (22,298) in other countries.

Number of staff	31.3.2010	31.12.2009
Reinsurance	11,316	11,309
Primary insurance	30,966	31,145
Munich Health	3,954	4,007
Asset management	781	788
<b>Total</b>	<b>47,017</b>	<b>47,249</b>

### Contingent liabilities, other financial commitments

In comparison with the situation at 31 December 2009, financial commitments of significance for the assessment of the Group's financial position show the following main changes: an increase of €132m in commitments under work and service contracts and an increase of €81m in other investment commitments. Also, loan commitments amounting to €80m were given; the corresponding loans were extended to the recipients in April 2010. No contingent liabilities have been entered into for the benefit of Board members.

### Earnings per share

The earnings per share figure is calculated by dividing the consolidated result for the reporting period by the weighted average number of shares.

Earnings per share		Q1 2010	Q1 2009
Consolidated result attributable to Munich Reinsurance Company equity holders	€m	482	433
Weighted average number of shares		189,798,691	195,347,079
Earnings per share	€	2.54	2.22

### Events after the balance sheet date

Under the share buy-back programme decided on by Munich Reinsurance Company's Board of Management in the fourth quarter of 2009, we repurchased a further 1,572,056 Munich Re shares with a volume of €191m after the balance sheet date up to the conclusion of the programme on 21 April 2010. On 28 April 2010, Munich Reinsurance Company's Board of Management resolved that 8,933,153 own shares acquired in the share buy-back programme be retired in a simplified process, without reducing the share capital but merely by adjusting the proportion of the Company's share capital represented by each of the remaining no-par-value shares. The 8,933,153 own shares are thereby retired.

On 12 April 2010, we sold part of our stake in Helvetia Holding AG, St. Gall. The market value of the shares sold totalled €119m, while the gain on disposal amounted to €90m. This transaction reduced our shareholding in the company from around 8.2% to below 3%.

As a consequence of the sinking of the oil rig Deepwater Horizon in the Gulf of Mexico, we anticipate a material-damage loss of around €60m, and further burdens in the liability segment which cannot be predicted accurately owing to their complexity. Overall, Munich Re expects a claims burden in the low triple-digit million euro range at most.

The Board of Management

## Review report

To Münchener Rückversicherungs-Gesellschaft Aktiengesellschaft in München

We have reviewed the condensed interim consolidated financial statements – comprising the consolidated balance sheet, the consolidated income statement, the statement of recognised income and expense, the statement of changes in Group equity, the condensed consolidated cash flow statement as well as the selected explanatory notes – and the interim management report of Münchener Rückversicherungs-Gesellschaft Aktiengesellschaft in München, for the period from 1 January 2010 to 31 March 2010, which are parts of the quarterly financial report in accordance with Section 37 x para. 3 of the WpHG (German Securities Trading Act). The preparation of the condensed interim consolidated financial statements in accordance with IFRS for Interim Financial Reporting, as adopted by the EU, and of the interim management report, which has been prepared according to the applicable regulations for interim management reports of the WpHG, are the responsibility of the Company's management. Our responsibility is to issue a report on these condensed interim consolidated financial statements and the interim management report based on our review.

We have performed our review of the condensed interim consolidated financial statements and the interim management report in accordance with the German generally accepted standards for the review of financial statements promulgated by the Institut der Wirtschaftsprüfer (IDW). Those standards require that we plan and conduct the review so that we can, through critical evaluation, preclude, with a certain level of assurance, that the interim consolidated financial statements have not been prepared, in material aspects, in accordance with IFRS for Interim Financial Reporting, as adopted by the EU, and that the interim management report has not been prepared according to the applicable regulations of the WpHG. A review is limited primarily to inquiries of company employees and analytical assessments and therefore does not provide the assurance attainable in a financial statement audit. Since, in accordance with our engagement, we have not performed a financial statement audit, we cannot issue an auditor's report.

Based on our review, no matters have come to our attention that cause us to presume that the condensed interim consolidated financial statements have not been prepared in all material respects in accordance with IFRS for Interim Financial Reporting, as adopted by the EU, and that the interim management report has not been prepared according to the applicable regulations for interim management reports of the WpHG.
